

Pimpri Chinchwad Education Trust's

**PIMPRI CHINCHWAD COLLEGE OF ENGINEERING**

**SECTOR NO. 26, PRADHIKARAN, NIGDI, PUNE 411044**

*An Autonomous Institute Approved by AICTE and Affiliated to SPPU, Pune*

**DEPARTMENT OF MECHANICAL ENGINEERING**

**Curriculum Structure and Syllabus**

**of**

**TY B Tech Mechanical Engineering**

**(Course 2020)**

**Effective from Academic Year 2022-23**

## Institute Vision

To Serve the Society, Industry and all the Stakeholders through the **Value-Added Quality Education.**

## Institute Mission

To serve the needs of society at large by establishing State-of-the-Art Engineering, Management and Research Institute and impart attitude, knowledge and skills with quality education to develop individuals and teams with ability to think and analyze right values and self-reliance.

## Quality Policy

We at PCCOE are committed to impart Value Added Quality Education to satisfy the applicable requirements, needs and expectations of the Students and Stakeholders. We shall strive for academic excellence, professional competence and social commitment in fine blend with innovation and research. We shall achieve this by establishing and strengthening state-of-the-art Engineering and Management Institute through continual improvement in effective implementation of Quality Management System.

## **TY B Tech**

### **Semester-V**

<b>Program:</b>		<b>B. Tech. (Mechanical)</b>				<b>Semester : V</b>			
<b>Course:</b>		<b>Heat Transfer (PCC)</b>				<b>Code : BME5410</b>			
<b>Teaching Scheme</b>					<b>Evaluation Scheme</b>				
<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>IE</b>	<b>MTE</b>	<b>TW</b>	<b>PR</b>	<b>ETE</b>	<b>Total</b>
<b>3</b>	<b>2</b>	<b>-</b>	<b>4</b>	<b>20</b>	<b>30</b>	<b>25</b>	<b>50</b>	<b>50</b>	<b>175</b>
<b>Prior knowledge of:</b> a. Mathematics: Integration and derivatives b. Steady flow energy equation c. Concept of boundary layer are essential									
<b>Course Objectives:</b> 1. To understand the application of conduction equation to various geometries with and without heat generation 2. To get conversant with transient analysis of lumped systems. 3. To get conversant with methods of determining heat transfer coefficient in natural and forced convection heat transfer 4. To learn estimation radiation heat transfer between objects with simple geometries 5. To get conversant with methods of design and analysis of heat exchanger.									
<b>Course Outcomes:</b> After learning the course, students should be able to 1. <b>Analyze</b> the basic heat conduction equation for steady, one dimensional thermal systems with and without internal energy generation. 2. <b>Compare</b> insulation thickness and <b>evaluate</b> heat augmentation by fin application. 3. <b>Analyze</b> transient one dimensional thermal system by using governing equations and charts. 4. <b>Analyze</b> the heat transfer phenomenon in natural and forced convection. 5. <b>Evaluate</b> heat transfer by radiation between objects with simple geometries 6. <b>Design</b> and <b>evaluate</b> the performance of parallel/ counter/ cross flow heat exchangers.									
<b>Detailed Syllabus:</b>									
<b>Unit</b>	<b>Description</b>								<b>Duration (H)</b>
<b>1</b>	<b>Modes of Heat Transfer and General Heat Conduction Equation:</b> Modes and Laws of heat transfer, thermal conductivity, thermal diffusivity. Boundary and initial Conditions, Solution of Steady one dimensional heat conduction Problems by applying boundary conditions. One dimensional steady state heat conduction with and without heat generation in plane wall, solid cylinder & sphere, with different boundary conditions.								<b>6</b>
<b>2</b>	<b>Composite Materials and Extended Surfaces:</b> Electrical analogy, thermal contact resistance, Thermal resistance network, Application to multi-layered (Composite) plane wall, hollow cylinder and hollow sphere, critical thickness of insulation for cylinder and sphere, economical and cost consideration. Heat transfer from finned surfaces, Types of fins, Governing Equation for constant cross sectional area fin, Solution for infinitely long fin, negligible heat loss from fin tip, short fins (corrected length), Fin efficiency & effectiveness.								<b>6</b>
<b>3</b>	<b>Transient heat conduction:</b> Validity and criteria of lumped system analysis, Biot and Fourier number, Transient analysis using lumped system analysis, Time constant and response of thermocouple, Transient heat analysis with special effects by using Heisler and Grober charts.								<b>6</b>
<b>4</b>	<b>Convective Heat Transfer:</b> Fundamentals of convection: Mechanism of natural and forced convection; local and average heat transfer coefficient, concept of velocity & thermal boundary layers, External Forced Convection: Dimensionless numbers and their physical significance; Flow over flat plates, cylinders, spheres, empirical correlations for both laminar and turbulent flows; Internal Forced Convection : General Thermal analysis with Constant surface heat flux and constant surface temperature conditions , Empirical correlations for both laminar and turbulent flows in tubes Natural convection: Introduction, dimensionless numbers and their physical significance, Empirical correlations for natural convection over surfaces.								<b>6</b>
<b>5</b>	<b>Thermal Radiation:</b> Fundamental concepts of radiation, Different laws of radiation, Radiation shape factor, Radiation heat transfer between black surfaces, Radiation heat transfer between Diffuse Gray surfaces, Radiation Shield <b>Boiling and condensation:</b> Pool boiling curve, different regimes of boiling heat transfer, critical heat flux, Film and drop wise condensation								<b>6</b>

6	<b>Heat Exchanger:</b> Classification, applications, concept of overall heat transfer coefficient, fouling factor, Heat exchanger analysis using LMTD for parallel flow and counter flow heat exchange, LMTD correction factor for multi-pass and cross flow heat exchangers by using charts, Effectiveness– NTU method for parallel flow heat exchanger and counter flow heat exchanger, use of charts for multi-pass and cross flow heat exchangers selection of heat exchangers.	6
	<b>Total</b>	<b>36</b>
<b>Text Books:</b> <ol style="list-style-type: none"> <li>1. Y.A. Cengel and A. J. Ghajar, Heat and Mass Transfer – Fundamentals and Applications, Tata McGraw Hill Education Private Limited, 2019</li> <li>2. F.P. Incropera, D.P. <b>LIST OF EXPERIMENTS</b> <b>Any eight experiments (1-11) and two assignments (12-14) from the following list</b> <ol style="list-style-type: none"> <li>1. Determination of Thermal Conductivity of metal rod</li> <li>2. Determination of Thermal Conductivity of insulating powder</li> <li>3. Determination of Thermal Conductivity of Composite wall</li> <li>4. Determination of Thermal Contact Resistance</li> <li>5. Determination of heat transfer coefficient in Natural Convection</li> <li>6. Determination of heat transfer coefficient in Forced Convection</li> <li>7. Determination of temperature distribution, fin efficiency in Natural / Forced Convection</li> <li>8. Determination of Emissivity of a Test surface</li> <li>9. Determination of Stefan Boltzmann Constant</li> <li>10. Determination of effectiveness of heat exchanger</li> <li>11. Study of pool boiling phenomenon and determination of critical heat flux</li> <li>12. Assignment on 1-D transient heat transfer program using finite difference methods.</li> <li>13. Assignment to solve transient heat transfer problem using Heisler and Grober charts.</li> <li>14. Assignment on multi-pass / cross-flow heat exchanger using effectiveness charts.</li> </ol>		

<b>Program:</b>		<b>B. Tech. (Mechanical)</b>				<b>Semester : V</b>					
<b>Course :</b>		<b>Machine Design (PCC)</b>				<b>Code : BME5411</b>					
<b>Teaching Scheme</b>						<b>Evaluation Scheme</b>					
<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>TW</b>	<b>PR</b>	<b>OR</b>	<b>Total</b>	
3	2	-	4	20	30	50	25	--	50	175	
<b>Prior knowledge of</b> a. Engineering Mechanics, b. Elements of Mechanical Engineering c. Strength of Materials d. Engineering Materials and metallurgy e. Kinematics and Theory of Machines f. Manufacturing Science are essential											
<b>Course Objectives:</b> This course aims at enabling the students to: 1. Analyze and define the industrial problem in the domain of machine design, and provide alternate solutions. 2. Choose best solution by evaluation of alternate solutions 3. Present the solution graphically using modern tools for modeling with representation of GD&T.											
<b>Course Outcomes:</b> After learning the course, the students will be able to 1. <b>UNDERSTAND</b> the design considerations and <b>IDENTIFY</b> the applicable considerations for given application. 2. <b>DESIGN</b> the machine components subjected to static loading based on strength and rigidity. 3. <b>DESIGN</b> the machine elements subjected to fluctuating stresses. 4. <b>DESIGN</b> the power screws and bolted connections for the industrial applications. 5. <b>SELECT</b> a rolling contact bearing for the given application. 6. <b>DESIGN</b> the spur gears for the industrial applications											
<b>Detailed Syllabus:</b>											
<b>Unit</b>	<b>Description</b>								<b>Duration (H)</b>		
1.	<b>Fundamentals of design-</b> Design, types of design, design cycle, design considerations, Design for manufacture, design for assembly, preferred number and series, use of standards and code in design, Aesthetic and ergonomic considerations in design, Material selection methods								6		
2.	<b>Design of Machine elements subjected to static loading based on Strength and Rigidity</b> Design of machine components such as knuckle joint, Axially and Eccentrically loaded parts based on strength. Design of shafts, helical compression spring based on strength and rigidity								6		
3.	<b>Design of Machine elements subjected to fluctuating stresses</b> S N Diagram, Endurance limit, endurance strength, design of components for infinite and finite life under cyclic loading, Design of parts for infinite and finite life under fluctuating stresses based on Soderberg, Goodman diagrams and Gerber parabola.								6		
4.	<b>Design of Power Screws and bolted connections</b> <b>Power screws-</b> Suitable thread forms, Torque required in overcoming thread friction while lifting and lowering the load, efficiency and self-locking/ overhauling conditions, compound and differential screws, <b>Bolted connections-</b> Design of eccentrically loaded bolted connections.								6		
5.	<b>Rolling Contact Bearings</b> Classification, selection of bearing type for given application, Static and dynamic load carrying capacity, selection of deep groove and taper roller bearings, Design for varying load and speeds, Bearings with life other than rated life., Bearing mounting and preloading of bearings.								6		
6.	<b>Design of Spur Gears</b> Design of spur gears- Selection of appropriate gear drive for given application, Fundamental geometric relations, Gear tooth failures, Design based on reversed bending stress fluctuating contact stresses, Gear lubrication.								6		
								<b>Total</b>		<b>36</b>

**Term work**

Term work shall consists of the following

**A. Design Project: Any ONE topic based on real life application**

- i. Design of manually operated or motorized application of Power screw in real life application.
  - ii. Design of single stage gearbox for industrial applications..
  - iii. Design of automotive valve operating mechanism.
- Design data book shall be used wherever necessary to achieve selection of standard components leading to minimum cost of the product being developed.
  - The detailed design report containing, problem selection, problem analysis, problem definition, Solution based on all applicable design considerations, exclusive summary reflecting final dimensions of parts, Leaflet comprising the final specifications of the product designed, cost, Instructions to the users shall be submitted.
  - 2D Part drawing in two views (preferably one sectional view exploring internal features of the parts) with representation of geometric, dimensional tolerances, surface roughness symbols, other instructions such as the surface coating, heat treatments to be submitted.
  - 2D assembly drawing in two views (preferably one sectional view exploring internal features of the assembly), with representation of overall dimensions, centre distances, dimensions ensuring alignment of parts in assembled condition, locations at which a particular fit is to be achieved, bill of materials representing clearly the OEM parts and parts to be manufactured in-house with correct representation of materials quantity, costing, Warrantee applicable to OEM parts.

**OR**

**Design Project** to develop and apply the knowledge of Machine Design and drafting software for any mechanical system on the basis of: (1) Idea generation, (2) Creativity, Reliability and safety, (3) Design parts of the system (4) Ergonomic Considerations (5) Use of International standards.

**B. Assignment: Any TWO topics from the following list**

- a. Case study on design of springs used in automotive application (Minimum 2different springs).
- b. Study of bolted connections in two wheeler containing purpose, type of loading, design approaches for the bolts.
- c. Identification of components of a bicycle subjected to static and fluctuating loads and suggesting design approaches for each.
- d. Case study on selection of bearing for any two the real life applications

A report (4-5 pages)/ poster and Power Point Presentation on these topics in a group of 4-5 students to be submitted while presenting the assignment.

Note: A group of 4-5 students shall work together for the design project and assignment.

<b>Program:</b>	<b>B. Tech. (Mechanical)</b>						<b>Semester : V</b>		
<b>Course :</b>	<b>Fluid Mechanics &amp; Machinery Lab (PCC)</b>						<b>Code : BME5412</b>		
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>					
<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>IE</b>	<b>MTE</b>	<b>TW</b>	<b>OR</b>	<b>ETE</b>	<b>Total</b>
--	2	-	1	--	--	25	25	--	50
<b>Prior knowledge:</b> a. Fundamental concepts and laws/governing equations of Fluid Mechanics. b. Fundamental concepts and laws/governing equations of physics and Mathematics. are essential									
<b>Course Objectives:</b> 1. To learn to use various instruments related to measurement of Pressure, Temperature, Velocity, Flow rate etc. 2. To experimentally verify the principles of Fluid Mechanics 3. To learn to conduct trials of various equipment like turbine, pumps, compressors 4. To learn to evaluate and analyze the performance of equipment like turbine, pumps, compressors									
<b>Course Outcomes:</b> After learning the course, students should be able to 1. Do measurements of flow properties like Pressure, Temperature, Velocity, Flow rate etc 2. To identify the types of flows 3. To experimentally verify the impulse momentum principle 4. To use and calibrate various flow measurement devices 5. To conduct trials on impulse and reaction turbines and analyze the performance. 6. To conduct trials on centrifugal Pump and Compressor and analyze the performance.									
<b>Detailed Syllabus:</b>									
<b>LIST OF EXPERIMENTS</b> <b>Any four</b> experiments out of <b>1 to 7</b> and <b>any four</b> out of <b>8 to 14</b> are to be conducted 1. Determination of viscosity of liquids and its variation with temperature. 2. Determination of Laminar and Turbulent flow by Reynolds's apparatus. 3. Verification of modified Bernoulli's equation. 4. Calibration of Orifice meter/ Venturimeter. 5. Determination of hydraulic coefficients of orifice/ V-notch 6. Determination of Major and minor losses through pipes. 7. Measurement of static pressure distribution, lift and drag around an aerofoil using wind tunnel apparatus. 8. Verification of Impulse Momentum Principle 9. Design of Pumping system using industrial manuals. 10. Performance analysis of Impulse Turbine under different conditions. 11. Performance analysis of Reaction Turbine under different conditions. 12. Performance analysis of Centrifugal Pump under different conditions. 13. Performance analysis of Centrifugal Compressor under different conditions. 14. Case study on 'Use of fans/blowers/compressor/pumps in Process Industry. (Student has to visit process industry using any of the listed turbo machines and prepare case study report on the same.)									
<b>Text Books:</b> 1. Modi P N & Seth S N, Hydraulics, Fluid Mechanics and Machinery, Standard Book House, New Delhi, 2017 2. Manish Dubey, BVSSS Prasad, Archana Nema ,Turbo-Machinery, , McGraw Hill,2018 3. Chow, V.T. and Maidment, Hydrology for Engineers, McGraw-Hill Inc., Ltd,2014

<b>Prior knowledge:</b> a. Fundamental concepts and laws/governing equations of Fluid Mechanics. b. Fundamental concepts and laws/governing equations of Engineering Thermodynamics. c. Fundamentals of Mathematics. are essential							
<b>Course Objectives:</b> This course aims at enabling the students to 1. To make the students conversant with the basic principles, governing equations and applications of Fans, Blowers and Compressors in real life and industrial domain. 2. To understand the construction, working principle and evaluate the performance characteristics of Fans, Blowers and Compressors. 3. To develop the competency to identify and analyze the losses and flow instabilities in Fans, Blowers and Compressors. 4. To create awareness about present energy scenario and energy conservation in compressible flow machines through the design modifications. 5. To create awareness about the recent innovations in compressible flow machines							
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. Apply the impulse momentum principle to different plate profiles and recognize use of turbo machines for enabling a sustainable society. 2. Design Centrifugal Compressors under different fluid flow conditions. 3. Analyze the performance of Axial flow Compressors under different fluid flow conditions. 4. Analyze the performance of Fans and blowers under different fluid flow conditions. 5. Identify the opportunities of energy conservation in the applications of compressed air 6. Identify and appreciate the recent developments in fans, blowers and compressor technology and improvement in their performance							
Detailed Syllabus:							
Unit	Description						Duration (H)
1	<b>Fundamentals of Turbomachinery</b> Classification of Turbomachines, Basic equation of energy transfer between fluid and rotor, Navier Stokes Equation, Impulse Momentum principle and its applications, force exerted by jet of water on flat plate(Fixed, Moving),curved plate at its center or one of the tip(Fixed and Moving),Series of plates(Flat and Curved), Performance analysis of above cases in terms of efficiency and work done.						6
2	<b>Centrifugal Compressor</b> Classification of rotodynamic compressors, blowers and fans. Centrifugal compressor: Construction and working, flow process on T-S Diagram, velocity diagram and Euler's work, slip factor and its effect on work input, actual work input, dimension parameters, pre-whirl losses, performance characteristics ,surging, choking, and stalling characteristics.						6
3	<b>Axial Flow Compressor</b> Construction and working, stage velocity triangles and its analysis, flow process on T-S Diagram , dimensionless parameters, flow through the blade rows, pressure rise across the stage, stage losses and efficiencies, performance characteristics.						6
4	<b>Fans and Blowers</b> Classification of Fans and blowers, Basics of stationary and moving air, Eulers characteristics, velocity triangles and operating pressure conditions, governing equations for blowers, Losses and hydraulic efficiency, surge and stall, Applications of blowers and fans.						6

<b>5</b>	<b>Energy Conservation in Compressed air system</b> Present energy scenario, Applications of compressed air in industry, Compressed air network, Leak detection in compressed air network, Methods to improve the performance.	<b>6</b>
<b>6</b>	<b>Recent innovations in compressible flow machines</b> Recent developments/innovations in fans, blowers and compressor technology for improvement in performance metrics and functionality.	<b>6</b>
	<b>Total</b>	<b>36</b>

<b>Prior knowledge:</b> a. Fundamental concepts and laws/governing equations of Fluid Mechanics. b. Fundamental concepts and laws/governing equations of Engineering Thermodynamics. c. Fundamentals of Mathematics. are essential							
<b>Course Objectives:</b> Students are expected to study, 1. To make the students conversant with the basic principles, governing equations and applications of Hydraulic Turbines and water resource devices in real life and industrial domain. 2. To understand the construction, working principle and evaluate the performance characteristics of Hydraulic Turbines and rotary pumps. 3. To develop the competency to identify and analyze the losses and flow instabilities in Hydraulic Turbines and rotary pumps. 4. To create awareness about present energy scenario and hydro potential. 5. To make the students conversant with the various industrial pumps.							
<b>Course Outcomes:</b> The Students will be able to, 1. Apply the impulse momentum principle to different plate profiles and recognize use of Turbomachines for enabling a sustainable society. 2. Estimate load factor, utilization factor, capacity factor of Hydropower plants 3. Design Impulse water Hydraulic Turbines and Analyze the performance of under different fluid flow conditions. 4. Design Reaction water Hydraulic Turbines and Analyze the performance of under different fluid flow conditions. 5. Design rotary pumps and Analyze the performance under different fluid flow conditions. 6. Select pumps for various industrial applications							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
<b>1</b>	<b>Fundamentals of Turbomachinery:</b> Classification of Turbomachines, Basic equation of energy transfer between fluid and rotor, Navier Stokes Equation, Impulse Momentum principle and its applications, force exerted by jet of water on flat plate(fixed, moving),curved plate at its center or one of the tip(Fixed and Moving),Series of plates(flat and curved), Performance analysis of above cases in terms of efficiency and work done.						<b>6</b>
<b>2</b>	<b>Basics of Hydropower Plants:</b> Classification of Hydropower plants, Definition of terms – load factor, utilization factor, Capacity factor, estimation of hydropower potential. hydropower development in India, Hydropower plants classification.						<b>6</b>
<b>3</b>	<b>Impulse Water Turbine:</b> Classification of Hydraulic Turbines, Working principle, construction, velocity diagram, Multijet Pelton Wheel, design aspects ,Performance parameters, characteristics curves, Unit Quantities, specific speed, Selection of Turbines						<b>6</b>
<b>4</b>	<b>Reaction Water Turbine:</b> Classification of Reaction water turbines, Working principle, construction, velocity diagram, degree of reaction, Performance parameters, characteristics curves, Draft Tube-types and analysis, Cavitation, Governing of water Turbines						<b>6</b>
<b>5</b>	<b>Rotary Pumps:</b> Classification of rotodynamic pumps, components of centrifugal pump, types of heads, velocity triangles and their analysis, effect of outlet blade angle, cavitation, NPSH, Thoma’s cavitation factor, priming of pumps, specific speed, performance characteristics of centrifugal pump, series and parallel operation of pumps, system resistance curve, selection of pumps.						<b>6</b>

<b>6</b>	<b>Industrial Pumps:</b> Turbine Pumps, API Process Pumps, Canned Motor Pumps, Circulator Pumps, Drum Pumps, Submersible Pumps, End Suction Pumps, Grinder Pumps, Chopper Pumps, Booster Pumps, Syringe Pumps.	<b>6</b>

<b>Prior Knowledge of</b> a. Fundamental concepts and laws/governing equations of Fluid Mechanics. b. Fundamental concepts and laws/governing equations of Engineering Thermodynamics. c. Fundamentals of Mathematics. are essential.									
<b>Course Objectives:</b> This course aims at enabling the students to 1. To make the students conversant with the basic principles, governing equations and applications of Steam and Gas Turbine. 2. To understand the construction, working principle and evaluate the performance characteristics of Steam and Gas Turbine. 3. To create awareness about the present energy scenario and the recent innovations in Steam and Gas Turbine.									
<b>Course Outcomes:</b> After learning the course, students should be able to 1. Apply the impulse momentum principle to different plate profiles and recognize use of turbomachines for enabling a sustainable society. 2. Analyze the energy transfer through the steam nozzles. 3. Analyze the performance of Steam Turbine under various conditions. 4. Analyze the performance of Gas turbine under various conditions. 5. Apply the principle of energy conversion, design parameters and recognize use of Steam and Gas Turbine for enabling a sustainable society. 6. Identify and appreciate the recent innovations in design and performance of steam and gas turbines and improvement in their performance.									
<b>Detailed Syllabus:</b>									
Unit	Description								Duration (H)
1	<b>Fundamentals of Turbomachinery:</b> Classification of Turbomachines, Basic equation of energy transfer between fluid and rotor, Navier Stokes Equation, Impulse Momentum principle and its applications, force exerted by jet of water on flat plate(fixed, moving),curved plate at its center or one of the tip(Fixed and Moving),Series of plates(flat and curved), Performance analysis of above cases in terms of efficiency and work done.								6
2	<b>Steam Nozzle:</b> Stagnation Properties- Function of nozzle – Applications and Types- Flow through nozzles- Thermodynamic analysis – Assumptions -Velocity of nozzle at exit-Ideal and actual expansion in nozzle- Velocity coefficient- Condition for maximum discharge, Critical pressure ratio- Criteria to decide nozzle shape- Super saturated flow, its effects, Degree of super saturation and Degree of under cooling - Wilson line.								6
3	<b>Basics of Steam Turbines</b> Construction and working of Impulse and Reaction steam turbine, velocity diagram, characteristics curves, governing of steam turbines, losses in steam turbine.								6
4	<b>Multistage Steam Turbine</b> Need, significance and types of multistaging of steam turbine, Velocity Triangles ,Stage Efficiency, The Stage Inlet Flow Profiles, Selecting the Blade Row Geometry, Dimensionless Performance Parameters, Airfoil Geometry, Selection of blade geometry								6
5	<b>Gas Turbines:</b> General layout of GTPP, components of GTPP, open, closed &semi- closed cycle gas turbine plant, Brayton cycle analysis for thermal efficiency, work ratio, maximum &optimum pressure ratio, inter-cooling; reheating & regeneration cycle gas and steam turbine combined cycle plant, environmental impacts of GTPP.								6

<b>6</b>	<b>Recent developments in steam and gas turbine technology</b> Recent innovations in design and other aspects to improve the performance metrics of steam and gas turbine.	<b>6</b>
	<b>Total</b>	<b>36</b>

<b>Program:</b>		<b>B. Tech. (Mechanical)</b>		<b>Semester : V</b>			
<b>Course :</b>		<b>Internal Combustion Engines (PEC-I)</b>		<b>Code: BME5501D</b>			
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Practical</b>	<b>Hours</b>	<b>Credit</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
<b>3</b>	<b>-</b>	<b>3</b>	<b>3</b>	<b>20</b>	<b>30</b>	<b>50</b>	<b>100</b>
<b>Prior knowledge of</b> a. Fundamental concepts of Thermodynamics b. Air standard cycles for I. C. Engines are essential							
<b>Course Objectives:</b> 1 To get familiar with the construction and working various engine systems 2 To understand the methods of theoretical analysis of I. C. engines 3 To learn the theory of combustion of S. I. and C. I. engines 4 To have understanding of various engine performance parameters and methods of measurement 5 To get familiar with the alternative fuels , pollution form I.C. engine and methods of controlling it							
<b>Course Outcomes:</b> After learning the course, the students will be able to 1 Compare various Engine sub systems based on their advantages, drawbacks and applications. 2 Analyze Fuel-Air cycles and actual cycles of I. C. Engines based on various parameters. 3 Analyze the P-theta diagram of S.I. Engine for stages of combustion, rate of pressure rise, abnormal combustion etc. 4 Analyze the P-theta diagram of C.I. Engine for stages of combustion, rate of pressure rise, abnormal combustion etc. 5 Calculate the performance parameters of I. C. Engines and analyze the performance characteristics curves. 6 Compare various alternative fuels based on the desirable properties for their utilization in I.C. Engines							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
<b>1.</b>	<b>Engine systems :</b> Heat Engine, IC and EC engines, Engine classification ,I.C. Engine construction - components and materials, Engine nomenclature, Comparison of S.I. & C.I., 4-s and 2-s Engines, Applications. Valve operating system, Valve timing diagram (Theoretical & Actual), Cooling System, Lubrication System, Ignition System, Governing system, Starting System						<b>6</b>
<b>2.</b>	<b>Engine Cycles:</b> Fuel air cycle analysis and its importance, Assumptions and considerations, Effect of variables specific heat, dissociation, Effect of A/F ratio, Comparison with air standard cycle, Comparison of Fuel Air cycle, Air Standard cycle and Actual cycle, various losses in actual cycles, Effect of parameters on losses in actual cycle.						<b>6</b>
<b>3.</b>	<b>SI Engines:</b> Fuel supply system of S. I. Engine : Air Fuel mixture requirements, Simple carburetor , systems of carburetor, Electronic fuel injection system T.B.I , M.P.F.I., G.D.I. System, sensors, actuators and ECU. Combustion in spark Ignition engines, stages of combustion, factors affecting combustion, rate of pressure rise, abnormal combustion: Detonation, Preignition. Combustion chambers of S.I. Engine, Rating of fuels in SI engines, Additives.						<b>7</b>
<b>4.</b>	<b>CI Engines:</b> Fuel supply system of C.I. engine, Mechanical Fuel Injection system, Quantity of fuel injected and size of nozzle, Electronic Diesel Injection system, sensors, actuators and ECU. Combustion in compression ignition engines, stages of combustion, factors affecting combustion, Phenomenon of knocking in CI engine. Types of combustion chambers, rating of fuels in CI engines, Dopes & Additives, Comparison of knocking in SI & CI engines, Supercharging and turbo-charging methods and their limitations						<b>6</b>
<b>5.</b>	<b>Engine Performance &amp; Testing:</b> Engine performance parameters, Methods of determination of various performance parameters, Engine performance characteristic curves, heat balance sheet.						<b>5</b>

6.	<b>Fuels and Emissions Control:</b> Important qualities of S.I. & C.I. Engine fuels, Possible alternative fuels: Alcohols, C.N.G., L.P.G., Biodiesel, Hydrogen etc. Air pollution due to IC engine and its effect, Emissions Norms, Sources of emissions, Components of emission from S.I. & C.I. Engines and their causes, Measurement of emission, Emission control methods for SI and CI engines.	6
	<b>Total</b>	<b>36</b>

<b>Prior knowledge of</b> a. Basic Engineering Science b. Material Science c. Engineering Metallurgy d. Manufacturing processes. are essential								
<b>Course Objectives:</b> To explain student’s significance of 1. Product design and Product development process 2. Concept design and detailed design related aspects. 3. Design Aspects (DFA, DFMEA, Design for Reliability) 4. Human factors in design and importance of patents in PDD process.								
<b>Course Outcomes:</b> On completion of the course, students will be able to – 1. <b>Understand</b> essential factors for product design 2. <b>Interpret</b> the concept design and detailed design during product development. 3. <b>Understand</b> methods and processes of Forward and Reverse engineering 4. <b>Apply</b> various design processes as DFA, DFMEA, design for reliability. 5. <b>Integrate</b> the Rapid Prototyping knowledge with available system for better product development. 6. <b>Understand</b> the importance of IPR and Patents.								
<b>Detailed Syllabus:</b>								
<b>Unit</b>	<b>Description</b>							<b>Duration, (H)</b>
<b>1.</b>	<b>Introduction to the Product Design Process and its specifications</b> Types of design, essential factors of product design vs. analysis, influence of design on cost and quality, product life-cycle, Problem statement, customer needs, product design specifications, Quality Function Deployment.							<b>6</b>
<b>2.</b>	<b>Conceptual Design</b> Establishing product functions; functional decomposition, morphological analysis; concept creation, concept selection. <b>Detail Design</b> Computer aided design (CAD) modeling, design simulation, manufacturing documentation, engineering drawings.							<b>6</b>
<b>3.</b>	<b>Reverse Engineering</b> Product Teardown Process, Tear Down Methods, Force Flow Diagrams, Measurement and Experimentation, Applications of Product Teardown, Benchmarking Approach and Detailed Procedure, Tools Used in Benchmarking Indented Assembly Cost Analysis, Function -Form Diagrams, Trend Analysis, Setting Product Specifications, Introduction to Product Portfolio and Architecture.							<b>6</b>
<b>4.</b>	<b>Design for X</b> Factors influencing process selection; fabrication guidelines; design for manufacturing, design for assembly. Design for Reliability Failure modes and effects analysis (FMEA).							<b>6</b>
<b>5.</b>	<b>Additive manufacturing and tooling</b> Need of Additive manufacturing, Classification of AM processes-Benefits- Applications. Stereolithography Apparatus (SLA), Fused deposition Modeling (FDM), Laminated Object Manufacturing (LOM), Selective Laser Sintering (SLS), Rapid Tooling.							<b>6</b>
<b>6.</b>	<b>Human Factors in Design</b> Principles of user-friendly designs; human factors engineering, Validation plan, Digital Vs Actual. Design for Sustainability, Green design; design for zero waste; design for disassembly, Intellectual property, Intellectual property and patents							<b>6</b>
	<b>Total</b>							<b>36</b>

## Department of Mechanical Engineering

<b>Program:</b>	<b>B. Tech. (Mechanical)</b>				<b>Semester: V</b>		
<b>Course:</b>	<b>Smart Manufacturing (PEC - II)</b>				<b>Code: BME5502B</b>		
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Practical</b>	<b>Hours</b>	<b>Credit</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
<b>3</b>	<b>--</b>	<b>3</b>	<b>3</b>	<b>20</b>	<b>30</b>	<b>50</b>	<b>100</b>
<b>Prior knowledge of:</b> a. Mathematical skills b. Basic programming skills c. Traditional manufacturing processes are essential							
<b>Course Objectives:</b> 1. To introduce the concept of smart factories, especially the various technologies involved within the smart manufacturing. 2. To cover the technological development and its impact in 4 <sup>th</sup> revolution of industry. 3. To introduce the applications and scope for technology involved in Industry 4.0.							
<b>Course Outcomes:</b> After learning this course, the students will be able to: 1. Recognize the recent manufacturing trends related to Industry 4.0 and its implementation in manufacturing industries. 2. Correlate the advanced technologies and their integration for the intelligent manufacturing. 3. Adapt the changes in existing manufacturing practices and relate the role of industrial robotics and sensors. 4. Identify the role of IoT and IIOT for smart factories, challenges and scope. 5. Apply different simulation techniques for smart manufacturing. 6. Identify applications of AR and VR in smart manufacturing.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
<b>1.</b>	<b>Introduction to Industry 4.0:</b> Background of industry 4.0, Smart factories, Technological pillars of Industry 4.0, Technological impact of Industry 4.0, Framework for Industry 4.0, Application of Industry 4.0 in smart manufacturing, Sustainable development in industry 4.0						<b>6</b>
<b>2.</b>	<b>Smart Manufacturing in Industry 4.0:</b> Overview of big data, data driven smart manufacturing, data lifecycle, introduction to big data analytics, different tools used for analytics, its application and limitations						<b>6</b>
<b>3.</b>	<b>Cloud computing and Cybersecurity in Industry 4.0:</b> Introduction to computing and its types, cloud computing and its benefits, cloud computing in industry 4.0, introduction to cybersecurity, security principles, risk and opportunities in cybersecurity technology						<b>6</b>
<b>4.</b>	<b>Industrial Robotics and Sensors:</b> Introduction, Recent Technological Components of Robots- Advanced Sensor Technologies, Internet of Robotic Things, Cloud Robotics, and Cognitive Architecture for Cyber-Physical Robotics, Industrial Robotic and sensors,0- Applications, Manufacturing, Maintenance and Assembly						<b>6</b>
<b>5.</b>	<b>Simulation and Artificial Intelligence in Industry 4.0:</b> Introduction to different simulation techniques, applications of simulation for smart industry, Interactive simulation, software for advance simulations and its limitations						<b>6</b>
<b>6.</b>	<b>Virtual and Augmented Reality in Industry 4.0:</b> Introduction, Difference in AR and VR, Hardware and Software Technology, Industrial Applications of Augmented reality and Virtual reality						<b>6</b>
	<b>Total</b>						<b>36</b>
<b>Text Books:</b> 1. Smid P., CNC Programming Handbook, Industrial Press, 2005 2. Leong W., Nine pillars of technologies for Industry 4.0, IET publishers, 2020 3. Gilchrist A., Industry 4.0: The Industrial Internet of Things, Apress, 2017

<b>3</b>	<b>--</b>	<b>--</b>	<b>3</b>	<b>20</b>	<b>30</b>	<b>50</b>	<b>--</b>	<b>100</b>
<b>Prior knowledge of:</b> a. Materials Engineering b. Manufacturing Science are essential								
<b>Course Objectives:</b> 1. To introduce advanced and exotic materials. 2. To establish the significance of material selection in engineering design. 3. To explore new design opportunities. 4. To select and analyze special forming processes for the product under consideration. 5. To select and analyze advanced joining processes for the product under consideration. 6. To understand and analyze the basic mechanisms of hybrid non-conventional machining techniques.								
<b>Course Outcomes:</b> After learning this course, the students will be able to: 1. <b>Analyze</b> different materials in advanced engineering applications. 2. <b>Relate</b> structure and properties of new materials in engineering applications. 3. <b>Evaluate and select</b> materials for advanced engineering applications. 4. <b>Classify and analyze</b> special forming processes. 5. <b>Analyze and identify</b> the applicability of advanced joining processes. 6. <b>Understand and analyze</b> the basic mechanisms of hybrid non-conventional machining techniques.								
<b>Detailed Syllabus:</b>								
<b>Unit</b>	<b>Description</b>							<b>Duration (H)</b>
<b>1</b>	Advanced and exotic materials: Biomaterials, Nanomaterials, Aerogels, Superconductors, Carbon Nano Tubes.							<b>6</b>
<b>2</b>	Smart Materials, Piezoelectricity, Magnetostriction, Smart Polymers, Shape Memory Alloys.							<b>6</b>
<b>3</b>	Introduction to Nano, Nano-biomimicry, Synthesis of nanomaterials by physical and chemical methods, Synthesis of nanomaterials by biological methods, Characterization of nanomaterials.							<b>6</b>
<b>4</b>	Special Forming Processes: Principle, machines, process variables, process capabilities and applications of High Energy Rate Forming process (HERF), High-Velocity Forming (HVF), Explosive Forming, Magnetic Pulse Forming, Electro-Hydraulic Forming, Petro-Forge Forming, Micro Forming, Micro Bending/Laser Bending.							<b>6</b>
<b>5</b>	Advanced Joining Techniques: Principle, process variables, process capabilities and applications of Friction Stir Welding, Electron Beam Welding, Laser Beam Welding, Explosive Joining, Cold Metal Transfer Welding, Ultrasonic Welding, Cryogenic Welding, Thermal Spray Coatings.							<b>6</b>
<b>6</b>	Advanced Machining Techniques: Diamond Turn Machining, Ultrasonic Micromachining, Focused Ion Beam Machining, Photochemical Machining, Introduction to hybrid processes, Magnetic Abrasive Finishing, Electrochemical Grinding (ECG), Shaped Tube Electrolytic Machining (STEM), Electro-jet Machining (EJM), Electrolytic In-process dressing (ELPD), Ultrasonic assisted EDM, Rotary EDM, Electrochemical Discharge Machining (ECDM), Laser surface treatments.							<b>6</b>
	<b>Total</b>							<b>36</b>
<b>Text Books:</b> 1. W.D. Callister, Material Science and Engineering: An Introduction, Wiley publication, 2014. 2. V. K. Jain, Advanced Machining Processes”, Allied Publishers Pvt. Ltd., 2009 3. M. ## Department of Mechanical Engineering

Program:	B. Tech. (Mechanical)				Semester: V			
Course:	Design Thinking (PEC– II)				Code: BME5502D			
Teaching Scheme/week				Evaluation Scheme				
Lecture	Tutorial	Hours	Credit	IE	MTE	ETE	TW	Total
3	--	3	3	20	30	50	--	100
Prior knowledge of Problem solving and Analytical skill is essential								
Course Objectives: 1. To highlight the importance of thinking and creativity and impart the skills needed for enhancing design thinking 2. To introduce the concept of design thinking and understanding of design process								
Course Outcomes: The students will be able to, 1. Develop a user centric mindset while designing, innovating and creative problem-solving. 2. Understand challenges and benefits of design Thinking. 3. Investigate design problems and generate ideas by creative thinking. 4. Practice design Thinking for defining the Problem								
Detailed Syllabus:								
Unit	Description							Duration (H)
1.	Design Thinking tools Concept of Design Thinking and Its Role within NPD and Innovation, Framework of Design Thinking, Principles and the “Mindset” of Design Thinking, Identifying Customer Needs, Product Specifications							6
2.	Phases of Design Thinking - Empathize, Define							6
3.	Applied Creativity Creativity, brainstorming, and concept generation process in designing.							6
4.	Phases of Design Thinking - Ideate, Design Heuristics – Opposite, Concept, User needs,							6
5.	Phases of Design Thinking - Prototype and Test							6
6.	Apply Agile method to developing software, Design an App using the principles of Design Thinking, Develop an App for Android							6
	Total							36
Text Books: 1. Design Thinking, M G Luchs, K C Swan, Wiley-Blackwell, 2015								
Reference books: 1. Design Thinking Methodology, Emrah Yayici , Publisher Emrah Yayici, 2016 2. Designing for Growth: A design thinking toolkit for Managers, Tim Ogilvie ,Columbia Business School Publishing 3. Integrated Design Engineering - Interdisciplinary and Holistic Product Development, Sándor Vajna, Springer International Publishing, Springer (2020)								
Assignments: 1. Use of Idea Generation software 2. Case Study - Analyzing existing product for improvement.								

<b>Program:</b>		<b>B. Tech. (Mechanical)</b>			<b>Semester: V</b>			
<b>Course:</b>		<b>Design for Reliability (PEC – II)</b>			<b>Code: BME5502E</b>			
<b>Teaching Scheme/week</b>				<b>Evaluation Scheme</b>				
<b>Lecture</b>	<b>Tutorial</b>	<b>Hours</b>	<b>Credit</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>TW</b>	<b>Total</b>
3	-	3	3	20	30	50	-	100
<b>Prior knowledge of</b> a. Probability and statistics b. Numerical methods are essential								
<b>Course Objectives:</b> 1. To impart a basic understanding of probability and statistical techniques used in reliability engineering. 2. To make the learner aware of applications of probability distributions in modeling and analyzing failure data. 3. To be familiar with the techniques used in system reliability modeling and analyze warranty data. 4. To provide a basic understanding of the use of probabilistic approaches to design components and predict reliability 5. To explain the concept of reliability allocation 6. To introduce the concepts of reliability testing.								
<b>Course Outcomes:</b> The students will be able to, 1. Use the basics of reliability and its measures for analyzing components and systems. 2. Apply probability distributions to estimate reliability functions such as reliability, CDF, PDF, hazard rate, etc. 3. Develop system reliability models to solve system reliability problems and analyze warranty data. 4. Apply probabilistic approaches for components design and reliability prediction. 5. Use reliability allocation methods to allocate reliability requirements at product design stage. 6. Select a suitable reliability testing method.								
<b>Detailed Syllabus:</b>								
<b>Unit</b>	<b>Description</b>							<b>Duration (H)</b>
<b>1</b>	<b>Introduction and Basic Reliability Mathematics</b> Reliability Engineering in 21 <sup>st</sup> Century, Concept of failure, reliability, maintainability and availability, Reliability objectives, How to meet reliability objectives. <b>Basic reliability mathematics:</b> Universe, Population, Sample, PDF, Reliability function, CDF, Moments of time to failure - MTTF, MTBF, the median time to failure, mode, skewness, kurtosis, variance and standard deviation, Hazard rate function, Bathtub curve							<b>6</b>
<b>2</b>	<b>Probability Distributions and Their Applications in Product Design</b> Discrete probability distribution - Binomial distribution, Poisson distribution. <b>Continuous Probability Distributions</b> – Weibull, exponential, normal (Gaussian), lognormal, estimation of reliability metric such as life of the component, warranty period, reliable life, etc. Concept of confidence interval							<b>6</b>
<b>3</b>	<b>System Reliability Modeling and Warranty Analysis</b> Failure Modes and Effects Analysis (FMEA), Fault Tree Analysis (FTA), Reliability Block Diagrams (RBDs), Root cause analysis <b>Warranty Analysis</b> Product warranties, warranty return information, warranty policies, warranty and reliability, warranty cost analysis, warranty and reliability management, Use of software for warranty analysis							<b>6</b>
<b>4</b>	<b>Probabilistic Design for Reliability and factor of safety</b> – Design for reliability, Design of a tension element, Reliability models for probabilistic design, Relationship between reliability, the factor of safety and variability, Functions of random variables, Steps for probabilistic design. <b>Reliability Predictions from Stress-Strength Models</b> - Physics of failure, Reliability from stress-strength distributions, Reliability from similar stress-strength distributions							<b>6</b>
<b>5</b>	<b>Reliability Allocation</b> Definition, Reliability allocation methods – equal allocation, weighting factor, and optimal reliability allocation. <b>Weighting factor methods</b> – ARINC, AGREE, Feasibility of objectives, Aggarwal’s method, Integrated factor. <b>Optimal reliability allocation methods:</b> Redundancy allocation, Cost minimization problem formulation.							<b>6</b>

<b>6</b>	<b>Reliability Testing</b> Introduction to reliability testing, Stress strength interaction, Introduction to Markov model Testing for Reliability and Durability- Accelerated Life Testing and Highly Accelerated Life Testing (HALT), highly accelerated stress Screening (HASS). Reliability in manufacturing- Production FRACAS.	<b>6</b>
	<b>Total</b>	<b>36</b>

Program	B. Tech. (AS&H)			Semester : V			
Course :	Statistical Data Analysis Using R (OEC – II)			Code : BAS5607			
Teaching Scheme				Evaluation Scheme			
Lecture	Practical	Tutorial	Credit	IE	MTE	ETE	Total
3	-	-	3	20	30*	50*	100
<b>Prior Knowledge of:</b> 1. Descriptive Statistics 2. Inferential Statistics 3. Probability are essential.							
<b>Course Objectives:</b> This course aims at enabling the students to learn data collection, visualization, and preprocessing techniques for data science.							
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. <b>Implement</b> R packages related to data science. 2. <b>Apply</b> different data visualization techniques to understand the data. 3. <b>Apply</b> data preprocessing methods and generate quality data for analysis. 4. <b>Analyze</b> the data using analytical methods for regression in real life Problems using the R. 5. <b>Develop</b> a model for Prediction and Decision Making for a data set. 6. <b>Frame</b> the hypothesis for the data and test it for data set in R.							
<b>Detailed Syllabus:</b>							
Unit	Description						Duration (H)
1.	<b>Introduction to data analysis and R Software fundamentals:</b> Understanding the Data, R Packages for Data Science, Importing and Exporting Data in R Software, Getting Started: Analyzing Data in R Software, Accessing Databases with R Software.						6
2.	<b>Data Wrangling:</b> Pre-processing Data in R Software, Dealing with Missing Values in R Software, Data Formatting in R Software, Data Normalization in R Software, Binning in R Software, Turning categorical variables into quantitative variables in R Software.						6
3.	<b>Data Visualization in R Software:</b> Histogram, Bar/ Line Chart, Box Plot (including group-by option), Scatter Plot (including 3D and other features), Mosaic Plot, Heat Map, Correlogram (GUIs)						6
4.	<b>Statistical Data Analysis:</b> Probability, Sampling & Sampling Distributions <b>Exploratory Data Analysis:</b> Central & Descriptive Statistics, Hypothesis Testing						6
5.	<b>Model Development:</b> Linear regression and multiple linear regression, model evaluation using visualization, prediction and decision making						6
6.	<b>Data Analysis Using R:</b> use a dataset from kaggle (Link is given below). Identify the problem statement for the given data and by applying data analysis techniques analyze the data. Draw inferences from the data. <a href="https://www.kaggle.com/code/cvaisnor/heart-2020/data">https://www.kaggle.com/code/cvaisnor/heart-2020/data</a> <a href="https://www.kaggle.com/code/kailash068/crop-recommendation/data">https://www.kaggle.com/code/kailash068/crop-recommendation/data</a> <a href="https://www.kaggle.com/datasets/debajyotipodder/co2-emission-by-vehicles">https://www.kaggle.com/datasets/debajyotipodder/co2-emission-by-vehicles</a> <a href="https://www.kaggle.com/datasets/csafrt2/higher-education-students-performance-evaluation">https://www.kaggle.com/datasets/csafrt2/higher-education-students-performance-evaluation</a>						6

<b>Program:</b>		<b>B. Tech. (Civil)</b>			<b>Semester : V</b>		
<b>Course :</b>		<b>Total Quality Management (OEC-II)</b>			<b>Code: BCI5602A</b>		
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Tutorial</b>	<b>Credit</b>	<b>H</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
3	-	3	3	20	30	50	100
<b>Course Objectives:</b> After Completing this course, student will have adequate background : 1. To understand the importance of Quality 2. To understand the need of Total Quality Management & it's tools 3. To understand role of ISO in quality management							
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. Describe Quality and Quality concepts 2. Apply different Quality control tools 3. Use cost of quality and ISO concepts and principles for quality assurance 4. Apply various techniques of TQM							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
<b>1.</b>	<b>Concept of Quality</b> a) Quality – Various definitions and interpretation. Importance of quality on a project in the context of global challenges, Factors affecting quality, Reasons for poor quality & measures to overcome, Contribution of various Quality Gurus(Juran, Deming, Crossby, Ishikawa). b) Evolution of TQM- QC, TQC, QA, QMS, TQM.						<b>6</b>
<b>2.</b>	<b>TQM &amp; Six Sigma</b> a) TQM – Necessity, advantages , Quality Function Deployment(QFD). b) Six sigma – Importance, levels.						<b>6</b>
<b>3.</b>	<b>Cost of Quality and ISO</b> a) Categories of cost of Quality. b) Study of ISO 9001 principles., Quality manual – Importance, contents, documentation, Corrective and Preventive actions, Conformity and NC reports						<b>6</b>
<b>4.</b>	<b>Techniques in TQM Implementation</b> a) Benchmarking in TQM, Kaizen in TQM, b) '5-S' techniques, Zero Defects.						<b>6</b>
<b>5.</b>	<b>Applications of Quality Control tools through Case study</b> a) Quality Circle Concept and applications through Quality Circle Formation b) Implementation of 7 QC tools through case study						<b>6</b>
<b>6.</b>	<b>Failure Mode Effect Analysis</b> a) FMEA problems, NPV b) Decision Tree problems						<b>6</b>
	<b>Total</b>						<b>36</b>
<b>Text Books:</b> 1. Total Quality Management-- Dr. Gunmala Suri and Dr. Puja Chhabra Sharma—Biztantra. 2. Quality Control and Total Quality Management by P.L.Jain- Tata McGraw Hill Publ. 3. Total Quality Management - Dr. S.Rajaram and Dr. M. Sivakumar—Biztantra. 4. Total Engineering Quality Management – Sunil Sharma – Macmillan India Ltd.							
<b>Reference Books:</b> 1. Juran’s Quality Handbook – Juran Publication. (2016 Edition) 2. Management –Principal, process and practices by Bhat – Oxford University Press.(2008) 3. <b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Tutorial</b>	<b>Credit</b>	<b>H</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
3	-	3	3	20	30	50	100
<b>Prior Knowledge of:</b> a. Fundamentals of Transportation and Traffic engineering b. Transportation Planning and Designing							
<b>Course Objectives:</b> After Completing this course, student will have adequate background : 1. To learn all the aspects related to intelligent transportation system and its application 2. To use the fundamental concepts of transportation system management. 3. To train the students to develop their career in transportation industry							
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. Describe the fundamentals and principles of ITS and its background 2. Demonstrate the knowledge of telecommunication practices in ITS 3. Distinguish the physical architecture and hardware composition in the implementation of ITS 4. Implement the ITS concept in various domains 5. Explain the user needs and services in the context of implementing effective ITS 6. Identify and evaluate the practical constraints in the implementation of the technology and the grass root level.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	<b>Introduction:</b> Introduction to Intelligent Transportation Systems (ITS) – Definition of ITS and Identification of ITS Objectives, Historical Background, Benefits of ITS - ITS Data collection techniques – Detectors, Automatic Vehicle Location (AVL), Automatic Vehicle Identification (AVI), Geographic Information Systems (GIS), video data collection						6
2.	<b>Telecommunications in ITS:</b> Telecommunications in ITS – Importance of telecommunications in the ITS system, Information Management, Traffic Management Centres (TMC). Vehicle – Roadside communication – Vehicle Positioning System						6
3.	<b>ITS architecture and Hardware:</b> Architecture – ITS Architecture Framework – Hardware Sensors – Vehicle Detection – Techniques – Dynamic Message Sign – GPRS – GPS – Toll Collection						6
4.	<b>ITS Functional Area:</b> Advanced Traffic Management Systems (ATMS), Advanced Traveler Information Systems (ATIS), Commercial Vehicle Operations (CVO), Advanced Vehicle Control Systems (AVCS), Advanced Public Transportation Systems (APTS), Advanced Rural Transportation Systems (ARTS).						6
5.	<b>ITS User Needs and Services:</b> Travel and Traffic management, Public Transportation Management, Electronic Payment, Commercial Vehicle Operations, Emergency Management, Advanced Vehicle safety systems, Information Management.						6
6.	<b>Case Studies:</b> Automated Highway Systems - Vehicles in Platoons – Integration of Automated Highway Systems. ITS Programs in the World – Overview of ITS implementations in developed countries, ITS in developing countries						6
	<b>Total</b>						<b>36</b>
<b>Reference Books:</b> 1. Intelligent Transport Systems, Intelligent Transportation Primer, Washington, US, 2001. 2. <b>Program:</b>		<b>B. Tech. (Computer)</b>			<b>Semester: V</b>		
<b>Course:</b>		<b>Data Structures Using Python (OEC-II)</b>			<b>Code: BCE5601</b>		
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
03	-	-	03	20	30	50	100
<b>Prior knowledge of</b> Python Programming is essential.							
<b>Course Objectives:</b> 1. To understand Python Specific Data Structures. 2. To illustrate and demonstrate Stacks, Queues. 3. To understand how searching and sorting is performed in Python. 4. To understand how linear and non-linear data structures work. 5. To learn the fundamentals of writing Python scripts. 6. To learn the operations on tree and graph data structure.							
<b>Course Outcomes:</b> After learning the course, students will be able to: 1. Differentiate the type of data structure. 2. Create, run and manipulate Python Programs using core data structures like Lists. 3. Comprehend the searching & sorting algorithms. 4. Apply suitable data structures to solve the programming problems. 5. Use effective and efficient data structures in solving various Computer Engineering domain problems. 6. Comprehend nonlinear data structures such as tree and graph.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	<b>Introduction to Data Structures:</b> Introduction to Python programming, Data Structures – Definition, Linear Data Structures, on-Linear Data Structures, Python Specific Data Structures - List, Tuples, Set, Dictionaries, Comprehensions and its Types, Strings, slicing. Arrays - Overview, Types of Arrays, Operations on Arrays, Arrays vs. List.						6
2.	<b>Searching and Sorting Techniques:</b> Searching - Linear Search and Binary Search Sorting - Bubble Sort, Selection Sort, Insertion Sort, Merge Sort and Quick Sort.						6
3.	<b>Linked List:</b> Introduction, Implementation of Singly Linked Lists, Doubly Linked Lists, Circular Linked Lists						6
4.	<b>Stack &amp; Queue:</b> Stacks - Overview of Stack, Implementation of Stack, Applications of Stack, Queues- Overview of Queue, Implementation of Queue, Applications of Queues, Priority Queues.						6
5.	<b>Tree:</b> Trees - Overview of Trees, Tree Terminology, Binary Trees - Introduction, Implementation. Tree Traversals, Binary Search Trees - Introduction						6
6.	<b>Graph:</b> Introduction, directed vs. Undirected Graphs, Weighted vs. Unweighted Graphs, Representations - Adjacency Matrix, Adjacency list, Graph Traversals - Breadth First Search, Depth First Search.						6
						<b>Total</b>	<b>36</b>
<b>Text Books:</b> 1. Data structures and algorithms in python by Michael T. Goodrich, ISBN-13: 978-1118290279, ISBN-10: 1118290275, Publisher: Wiley; 1st edition (March 18, 2013). 2. Problem Solving with Algorithms and Data Structures Using Python by Bradley N Miller and David L. Ranum. ISBN-13: 978-1590282571, ISBN-10: 1590282574, Publisher: Franklin, Beedle & Associates; 2nd edition (August 22, 2011).							
<b>Reference Books:</b> 1. Hands-On Data Structures and Algorithms with Python: Write complex and powerful code using the latest features of Python 3.7, 2nd Edition by Dr. Basant Agarwal, Benjamin Baka. ISBN: 9781788991933, 2018. 2. Core Python Programming -R. Nageswara Rao, ISBN-10: 9789351199427, ISBN-13: 978-9351199427, Willy; 1st edition (January 1, 2016).							

<b>Program:</b>		<b>B. Tech. (Computer)</b>			<b>Semester: V</b>		
<b>Course:</b>		<b>Programming with C++ (OEC-II)</b>			<b>Code: BCE5602</b>		
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
03	-	-	03	20	30	50	100
<b>Prior knowledge of</b> Python Programming is essential.							
<b>Course Objectives:</b> 1. To explore the principles of Object-Oriented Programming (OOP). 2. To use the concept of inheritance and polymorphism. 3. To understand the use of exception handling in C++ programs. 4. To provide a foundation for advanced programming using File handling and STL. 5. To provide lifelong learning attitude towards problem solving.							
<b>Course Outcomes:</b> After learning the course, students will be able to: 1. Compare the strengths of object-oriented programming with respect to procedural programming. 2. Demonstrate working with primitive data types. 3. Understand and demonstrate dynamic memory management techniques. 4. Analyze and apply the concept of function overloading & operator overloading for real time problem solving. 5. Classify inheritance with the understanding of early and late binding, usage of exception handling, generic programming. 6. Demonstrate the use of various advanced object-oriented concepts with the help of programs.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	<b>Introduction of OOPs Concepts</b> Overview of procedural programming and object-oriented programming, Syntax of variables declaration, Classes and objects, Member functions, memory management. <b>Case Study:</b> Write a program in c++ to create an employee class with appropriate features.						6
2.	<b>Inheritance</b> Introduction, benefits, Access specifiers, Types of inheritance - single, multiple, multilevel, hybrid and hierarchical. <b>Case Study:</b> Write a program in c++ to derive class bicycle from class vehicle with appropriate syntax.						6
3.	<b>Polymorphism</b> Introduction, Types of polymorphism: function and operator, Virtual functions, Pure virtual functions, Virtual base class, Overloading and overriding. <b>Case study:</b> Write a program in c++ to overload '+' and '-' operator.						6
4.	<b>Exception Handling</b> Introduction to exception, Benefits of exception handling, try, throw and catch blocks, pre-defined exceptions in c++, Re-throw. <b>Case Study:</b> Write a program in c++ to create a class student with name, age, roll no and telephone number as parameters. Program should throw an exception if telephone_number>10.						6
5.	<b>File Handling</b> Classes for file stream operation, Opening and closing a file, File pointers and their manipulation, File operations on binary files – variables, class objects, sequential file organization, Direct access files. <b>Case Study:</b> Write a program in c++ to create a database for airline reservation system using file handling.						6
6.	<b>Templates</b> Introduction, Function templates, Class template with multiple parameters. <b>Introduction to STL: Introduction</b> of STL components, Sequential container,Algorithms, Iterators. <b>CaseStudy:</b> Write a program in c++ to create vector template using STL container.						6
						<b>Total</b>	<b>36</b>

1. An Introduction to Programming Through C++, NPTEL, 12 weeks

<b>Program:</b>	<b>B. Tech. (E&amp;TC)</b>			<b>Semester: V</b>			
<b>Course:</b>	<b>Smart City:An Electronic Perspective (OEC-II)</b>			<b>Code: BET5601</b>			
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Tutorial</b>	<b>Credit</b>	<b>Hours</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
3	-	3	3	20	30	50	100
<b>Prior knowledge of</b> a. Basic Electronics b. Basics of electronic communications.							
<b>Course Objectives:</b> 1. To explore need and basics of smart city and fundamental concepts of IoT. 2. To elucidate the roles of sensors and protocols in IoT 3. To explain different IoT framework and networking protocols.							
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. realize the need of smart city and its implementation challenges . 2. Comprehend the various concepts, terminologies and architecture of IoT systems. 3. Use sensors and actuators for design of IoT system for smart city. 4. Apply various wireless protocols for design of IoT systems. 5. Identify the impact of distributed Intelligence and Central Planning on city. 6. Design IoT framework based applications used in smart city.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
<b>1.</b>	<b>Necessity of SMART CITY:</b> The Smart City Philosophy, Development of Asian Cities, Megacities of India, : Current Challenges, The India Story of Smart Cities, Conceptual Basis of a Smart City, Global Smart City Programs, Recommendations for Smart City Framework.						<b>6</b>
<b>2.</b>	<b>Fundamentals of IOT:</b> History of IoT, Introduction, definition and characteristics of IoT, architecture of IoT, Physical & logical design of IoT, Enabling technologies in IoT, Identifiers in IoT,M2M communication verses IoT.						<b>6</b>
<b>3.</b>	<b>Sensor Networks:</b> Definition, types of sensors & actuators, examples & working, RFID Principles and components, Wi-Fi, Bluetooth, etc. ireless sensor network: History, sensor node, networking nodes, WSN versus IoT.						<b>6</b>
<b>4.</b>	<b>Wireless Protocols for Smart Cities:</b> IPv6overLow-Power Wireless Personal Area Network: Features, Addressing, Packet fragmentation, Operation, Security. ZigBee: Architecture Objectives, Wireless NetworkingBasics, Wireless Networking Assumptions, Bluetooth Low Energy, IoT data protocols: MQTT Protocol. COAP Protocol, AMQP Protocol.						<b>6</b>
<b>5.</b>	<b>Distributed Intelligence and Central Planning:</b> On the Interplay between Humans and Smart Devices, Theoretical Tools, Intelligence-artificial Intelligence (Machine Intelligence), Information Dynamics, Synergetic, Information Dynamics and Algometry in Smart Cities.						<b>6</b>
<b>6.</b>	<b>Applications of IoT in smart city: TheRoleof ICTs,</b> Applications in smart city & their distinctive advantages -smart environment, smart street light and smart water & waste management. Smart transportation and hospitality, Roleand scopeofIOT inpresent andfuturemarketplace. Industrial IoT.						<b>6</b>
	<b>Total</b>						<b>36</b>

<b>Prior knowledge of</b> a. Engineering Mathematics b. Basics of OOPs is essential							
<b>Course Objectives:</b> 1. To explain basic modeling techniques and tools. 2. To demonstrate role of Model in continuous and discrete systems. 3. To explore with neural networks and its modeling. 4. To illustrate with fuzzy set and its modeling.							
<b>Course Outcomes:</b> After learning the course, the students should be able to: 1. Understand the basic requirements of Modeling and tools used in simulation. 2. Analyze the physical models and their criteria as per knowledge of the system. 3. Compare different types of deterministic models and their applications. 4. Use optimization method; Genetic algorithms for model optimization. 5. Design the Neural Network based models using appropriate software tools. 6. Design and simulate the Fuzzy controllers to solve engineering problems.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
<b>1</b>	<b>Introduction:</b> Programming environment, input and output variables, State variables, basic syntax; Deterministic linear model, Array mathematics in Matlab, Plotting, Static and Dynamic systems; Hierarchy of knowledge about a system and Modeling Strategy.						<b>6</b>
<b>2</b>	<b>Physical Modeling:</b> Dimensions analysis, Dimensionless grouping of input and output variables of find empirical relations, similarity criteria and their application to physical models. Stochastic modeling, Review of conservation laws and the governing equation for heat, mass and momentum transfer.						<b>6</b>
<b>3</b>	<b>Modeling of System with Known Structure:</b> Deterministic model: distributed parameter models in terms of partial identification and their solutions and lumped parameter models in terms of differential and difference equations, state space model, transfer functions block diagram and sub systems, stability of transfer functions, modeling for control.						<b>6</b>
<b>4</b>	<b>Optimizations and Design of Systems:</b> Summary of gradient based techniques : Nontraditional Optimizations techniques, genetic Algorithm (GA)- coding, GA operations, elitism, Application using MATLAB: Simulated Annealing, Introduction to GUI, GUI Programming.						<b>6</b>
<b>5</b>	<b>Introduction to Neural Network Modeling:</b> Basics of Neural Network, Neural Network Modeling of Systems only with Input-output Database: Neurons, architecture of neural networks, knowledge representation, learning algorithm. Multilayer feed forward network and its back propagation learning algorithm,						<b>6</b>
<b>6</b>	<b>Modeling Based on Expert Knowledge:</b> Fuzzy sets, Membership functions, Fuzzy Inference systems, Expert Knowledge and Fuzzy Models, Design of Fuzzy Controllers, Simulation of Engineering Systems: Monte-Carlo simulation, Simulation of continuous and discrete processes with suitable examples from engineering problems.						<b>6</b>

<b>Prior Knowledge of:</b> a. C Programming is essential.							
<b>Course Objectives:</b> 1. To learn the fundamentals of object-oriented concepts and programming. 2. To develop problem-solving skills using object oriented programming concepts. 3. To apply the concepts of object-oriented paradigm. 4. To develop programming skills using object oriented programming concept.							
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. Demonstrate the key object oriented concepts. 2. Apply functions for given real life data 3. Apply operator overloading to develop programs 4. Design hierarchy of classes using inheritance. 5. Make use of polymorphism using virtual functions for solving real life problems. 6. Develop application which handles different types of exceptions							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	FUNDAMENTALS OF OBJECT ORIENTED PROGRAMMING Object Oriented Paradigm, Features of Object-Oriented Programming: Objects and Classes, Data Abstraction and Encapsulation, Inheritance, Polymorphism, Dynamic Binding, Message Communication. Visibility/Access Control, Constructors and Destructors, Operators, Static data members and member functions, Arrays and reference variables.						6
2.	FUNCTIONS Function prototypes, Default and Const arguments, Object as a function argument and returning object, Passing argument by reference, Returning a reference, Inline functions, Function overloading, Friend function.						6
3.	OPERATOR OVERLOADING Rules of operator overloading, overloading the unary and binary operators using member and friend function, overloading relational and assignment operator.						6
4.	INHERITANCE Need of inheritance, base and derived classes, member accessibility, types of inheritance, derived class constructor, constructors in multiple inheritance, overriding member functions, virtual base class.						6
5.	VIRTUAL FUNCTIONS Pointers, Pointers to objects, 'this' pointer, Pointers to derived classes, virtual functions, Pure virtual functions, abstract class, virtual destructors.						6
6.	EXCEPTION HANDLING Introduction, Exception handling mechanism: try, catch and throw, Multiple Exceptions, Exceptions with arguments						6

--	2	2	--	--	--	--	--
<b>Prior knowledge of:</b> a. Solid Mechanics, b. Numerical and Statistical Methods c. Engineering Mechanics, d. Manufacturing Science, are essential							
<b>Course Objectives:</b> The objective of Course is to, 1. To provide the information on various types of CAE analysis and various commercial software available in the market for CAE. 2. To provide a practical knowledge of the finite element methods and the skills required to analyze engineering problems with commercially available FEA software's.							
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. DEFINE the use of CAE tools and DESCRIBE the significance of shape functions in finite element formulations. 2. APPLY the various meshing techniques for better evaluation of approximate results. 3. APPLY material properties and boundary condition to SOLVE 1-D and 2-D element stiffness matrices to obtain nodal or elemental solution. 4. ANALYZE steady state thermal problems. 5. EVALUATE and SOLVE dynamic analysis problems 6. GENERATE the results in the form of contour plot by the USE of CAE tools.							
<b>Detailed Syllabus:</b>							
<b>Practical</b>	<b>Description</b>						<b>Duration (H)</b>
1	Part I <ul style="list-style-type: none"><li>● Introduction to Computer Aided Engineering (CAE)</li><li>● Use of CAE in Product development and its applications to engineering problems</li><li>● Discretization method commonly used (FEM) for CAE.</li><li>● Use of application software and different available software</li><li>● CAE Tools- Pre-processor, Solver and Post-Processor.</li><li>● Nodal unknowns and shape function (Quadratic function)</li></ul>						4
2	Part II <ul style="list-style-type: none"><li>● Fundamentals of finite elements, application to solid mechanics: Introduction to bar, truss elements, beam elements, constant strain triangle (CST).</li><li>● Meshing Techniques: Discretization of a Structure, 1D, 2D and 3D element Meshing, Use of Symmetry, Mesh quality (Skewness, orthogonal quality, Aspect ratio, etc.), Mesh independent test.</li></ul>						4
3	<ul style="list-style-type: none"><li>● 1D Bar Element – Structural Linear Analysis</li><li>● Truss Analysis using 1D Element</li></ul>						4
4	<ul style="list-style-type: none"><li>● Thermal Analysis – Static Analysis</li><li>● Coupled Analysis- (Structural + Thermal)</li></ul>						4
5	<ul style="list-style-type: none"><li>● Modal Analysis – Spring -Mass system, simply supported/Cantilever beam, etc.</li><li>● Analysis of Machine Component using 3D Elements-Part I</li></ul>						4
6	<ul style="list-style-type: none"><li>● Analysis of Machine Component using 3D Elements: Part II</li><li>● Presentation on advanced applications of FEA, NVH, CFD, Crash, Fatigue, Manufacturing, etc.</li></ul>						4

<b>Course Objectives:</b> This course aims at enabling the students a. To enhance the logical reasoning skills of the students and improve the problem-solving abilities. b. To improve the overall professional development of students.							
<b>Course Outcomes:</b> Students will be able to After learning the course, the students will be: 1. Having adaptive thinking and adaptability through various Quantitative ability concepts. 2. Having critical thinking and innovative skills 3. Having interest in lifelong learning & developing verbal competencies in the students.							
<b>Detailed Syllabus:</b>							
Unit	Description						Duration (H)
1.	<b>Modern Maths</b> Profit loss, Ratio & Proportion, LCM & HCF, Time speed and Distance, Average, Mean, mode, median, permutation & combination, Probability, Pipe & systems, Mixture validation, Allegations and Mixtures, Simple Interest and Compound Interest.						6
2.	<b>Algebra</b> Linear equations, Quadratic equations, Triplets. <b>Geometry</b> Triangles, Polygons (questions on Area Perimeter).						6
3.	<b>Mensuration</b> Cube cuboids cone cylinder sphere (questions on volume surface Area) <b>Trigonometry</b> <b>Number System</b> <b>Statistics.</b>						6
4.	<b>Logical Reasoning</b> Clocks and Calendar, Direction sense, Family tree, Syllogism, Seating arrangement, Team formation, Coding and Decoding, Number Series and Letter Series, Ranking and Arrangements, Game-Based Aptitude.						6
5.	<b>Data Interpretation</b> Data charts, Data tables, Bar, Pie, Line graphs, Venn diagram.						6
6.	<b>Verbal Ability &amp; Reading Comprehension</b> Subject-Verb Agreement, Articles and Other Determiners, Prepositions, Tenses, Parts of Speech, Active and Passive Voice, Direct and Indirect Speech, Error Spotting and Sentence Correction, Sentence Completion, Synonyms and Antonyms, Reading Comprehension, Para Jumbles.						6
	<b>Total</b>						<b>36</b>

<b>Prior knowledge :Nil</b>							
<b>Course Objectives:</b> 1. To gain an understanding on the concepts and strategies related to sustainable development and identify and analyze various conservation methods for renewable and non-renewable resources. 2. To examine biotic and abiotic factors within an ecosystem and to identify energy flow in ecosystem. 3. To understand the value of biodiversity and identify current efforts for its conservation at national and local level 4. To provide comprehensive overview of environmental pollution and technology associated with monitoring and control.							
<b>Course Outcomes:</b> After completion of this course, the students will be able to, 1. Demonstrate an integrative approach to environmental issues with a focus on sustainability and identify the role of organism in energy transfer in different ecosystem. 2. Distinguish between renewable and non-renewable resources and analyze consumption of resources 3. Identify key threats to biodiversity and develop appropriate policy options for it’s conservation. 4. Analyze the impact of environmental pollution and the science behind those problems and potential solutions.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
<b>1.</b>	<b>Multidisciplinary nature of environmental studies:</b> Definition, scope and importance, Need for Public awareness, <b>Natural Resources:</b> Renewable and non- renewable resources: Natural resources and associated problems a) Forest b) Water c) Mineral d) Food e) Land f) Energy, Role of an individual in conservation of natural resources, Use of resources for sustainable lifestyle.						<b>3</b>
<b>2.</b>	<b>Ecosystems:</b> Concept of an ecosystem, Structure and function of an ecosystem, Producers, consumers and decomposer, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids, Characteristic features, Case study on Forest ecosystem, Aquatic ecosystem.						<b>3</b>
<b>3.</b>	<b>Biodiversity and its conservation:</b> Introduction – Definition: genetic, species and ecosystem diversity, Biogeographically classification of India, Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic values, Biodiversity at global, national and local levels, India as a mega-diversity nation, Hotspots of biodiversity, Threats to biodiversity, Conservation of biodiversity, Case study on any one Hotspot of biodiversity.						<b>3</b>
<b>4.</b>	<b>Environmental Pollution:</b> Definition, Cause, effects and control measures of different pollution: a. Air b. Water c. Soil d. Noise e. Thermal f. Nuclear hazards, Solid waste management, Relevance of environmental ethics for environmental protection, <b>Social Issues and the Environment</b> :From Unsustainable to Sustainable development ,Urban problems related to energy ,Water conservation, Impact of Climate change, Innovative ideas for creating public environmental awareness.						<b>3</b>

<b>Prior knowledge of:</b> a. System of linear equations, b. Partial differentiation c. Problem solving and programming are essential								
<b>Course Objectives:</b> Students are expected to study, 1. Effectively use Numerical Techniques for solving complex Mechanical engineering problems 2. Develop logical sequencing for solution procedure. 3. Optimize the solution for different real-life problems with available constraints.								
<b>Course Outcomes:</b> The Students will be able to, 1. <b>Use</b> appropriate Numerical Methods to solve complex mechanical engineering problems. 2. <b>Formulate</b> algorithms and programming. 3. <b>Compare</b> the system's behaviour for the experimental data. 4. <b>Generate</b> solutions for real-life problems using optimization techniques								
<b>Detailed Syllabus:</b>								
<b>Unit</b>	<b>Description</b>							<b>Duration (H)</b>
1.	<b>Solution of Linear algebraic equations</b> <b>Root of an equation:</b> Bisection Method, Newton Raphson method <b>Simultaneous equations:</b> Gauss Elimination Method with Partial pivoting, Gauss-Seidel method and Thomas algorithm for Tri-diagonal Matrix. <b>Numerical Integration:</b> Trapezoidal rule, Simpson's 1/3 <sup>rd</sup> Rule, Simpson's 3/8 <sup>th</sup> Rule.							6
2.	<b>Curve Fitting and Regression Analysis</b> <b>Curve Fitting:</b> Least square technique- Straight line, Power equation, Exponential equation and Quadratic equation. <b>Regression Analysis:</b> Nonlinear regression, multi regression analysis, Lagrange's Interpolation, Newton's Forward interpolation.							6
3.	<b>Solution of Differential Equations</b> <b>Ordinary Differential Equations [ODE]:</b> Euler Method, Modified Euler Method, Runge-Kutta 2 <sup>nd</sup> order and 4 <sup>th</sup> order method. <b>Partial Differential Equations [PDE]:</b> Finite difference method, Simple Laplace method, PDEs-Parabolic explicit solution.							6
4.	<b>Optimization</b> Introduction to optimization, Classification, Constrained optimization: Graphical and Simplex method (limited to two variables), Nonlinear Optimization, Modern Optimization Techniques (theoretical treatment only)							6
	<b>Total</b>							<b>24</b>
<b>Textbook:</b> 1. Steven C. Chapra, Raymond P. Canale, Numerical Methods for Engineers, McGraw-Hill Higher Education, 2010 2. Dr. B. S. **Practicals:**

**Complete all assignments in MATLAB software**

1. **Program on Roots of Equation** (Validation using a suitable solver, anyone per student)
  - a) Bisection Method, b) Newton Raphson method
2. **Program on Simultaneous Equations** (Validation using a suitable solver, anyone per student)
  - a) Gauss Elimination Method, b) Thomas algorithm for tridiagonal matrix, c) Gauss-Seidel method.
3. **Program on Numerical Integration**(Validation using a suitable solver, anyone per student)
  - a) Trapezoidal rule, b) Simpson's Rules (1/3rd, 3/8th) [In one program only]
4. **Program on Curve Fitting using Least square technique** (Validation using a suitable solver, anyone per student t)
  - a) Straight line, b) Power equation, c) Exponential equation, d) Quadratic equation
5. **Program on Interpolation**(Validation using a suitable solver, anyone per student)
  - a) Lagrange's Interpolation, b) Newton's Forward interpolation,
6. **Program on ODE**(Validation using a suitable solver, anyone per student)
  - a) Euler Method, b) Runge-Kutta Methods- fourth-order, c) Simultaneous equations. (Runge-Kutta second-order: *One-step only*).
7. **Program on PDE**(Validation using a suitable solver, anyone per student): Laplace equation
8. **Demonstration of optimization technique using suitable solver.**

**NOTE:**

1. Solver is compulsory for all above programs and compared with the actual solution.
2. Manual solution for each problem.
3. Algorithms and Flowcharts are compulsory for all programs.

**GUIDELINES TO CONDUCT PRACTICAL EXAMINATION**

Anyone program from each set A & B with flowchart and solver: **Duration: 2 hrs.**

**Set A:** (Weightage – 60 %)

a) Simultaneous Equation, b) Partial Differential Equation (Laplace equation with solver) c) Interpolation: Lagrange's interpolation, Newton's Forward interpolation (Anyone)

**Set B:** (Weightage – 40 %)

a) Roots of Equations, b) Curve Fitting, c) Ordinary Differential Equations, d) Integration

<b>Prior knowledge of:</b> a. Applied Mathematics b. Metrology and Mechanical Measurement are essential								
<b>Course Objectives:</b> After completion of the course, students will have adequate background, conceptual clarity and knowledge of interdisciplinary principles related to: 1. To understand the principles of electrical actuators and its selection according to the applications. 2. To study the data acquisition system and its various components. 3. To understand the different control systems, modeling and analysis of mechanical system. 4. To study the basics of fluid power systems and its applications 5. To utilize the concepts of the PLC system and ladder programming.								
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. SELECT appropriate electrical actuator for any mechatronics system. 2. UTILIZE the concept of DAQ and signal processing to interface any sensor to acquire the data. 3. DETERMINE the transfer function and PREDICT the stability of the mechanical system. 4. IDENTIFY and APPLY the basics fluid power components to CREATE the hydraulic /pneumatic circuits. 5. DESIGN and DEVELOP a ladder programming for mechanical applications. 6. DESIGN and ANALYSE the PID controller for mechanical system.								
<b>Detailed Syllabus:</b>								
<b>Units</b>	<b>Description</b>							<b>Duration (H)</b>
1	<b>Electrical Actuators:</b> Classification of actuators; DC motors: PMDC and BLDC; AC motors : induction motor; Special purpose motors : Stepper motor and servo motor; Selection of motors and its applications; electro-mechanical solenoid.							6
2	<b>Data Acquisition &amp; Control System:</b> Introduction to DAQ, Components of a Data Acquisition System; Sampling, Aliasing, Sample and hold circuit, Quantization; Analog-to-digital converters (4 bit Successive Approximation type ADC); Digital-to-Analog converters (4 bit R2R type DAC); Basics of Labview; Numericals.							6
3	<b>Mathematical Modelling &amp; Analysis:</b> Introduction to control systems, need, Types- Open and Closed loop; Concept of Transfer Function, Block Diagram & Reduction principles; Numericals; Transfer Function based modeling of Mechanical system; Concept of Poles & Zeros, Stability Analysis using Routh Hurwitz Criterion; Numericals.							6
4	<b>Introduction to Fluid Power:</b> Basics of fluid power, Fluid power system components: Hydraulic Gear Pump; Reciprocating air compressor Linear and rotary actuators (Single acting and double acting cylinder, air motor); Direction control valves, Pressure control valve; Flow control valve, proportional valve; Standard Symbols of fluid power components; Industrial applications.							6
5	<b>Programmable Logic Controller (PLC) :</b> Introduction to PLC, Architecture of PLC; Specifications of PLC; Ladder Logic programming for different types of logic gates; Latching, Timers, Counters; PLC programming; and its mechatronics applications.							6
6	<b>PID control:</b> Introduction to controllers; Need for control; Proportional (P), Integral (I) and Derivative (D) control actions; PI, PD and PID control systems in parallel form; PID tuning; Numericals.							6
	<b>Total</b>							<b>36</b>

**Term Work:**

The Term work shall consist of completion of Practical and Self-learning study. Oral examination shall be based on the term work undertaken during the semester. **Any eight experiments out of the following:**

1. Demonstration of speed control of BLDC motor using PWM.
2. Experiment on interfacing of suitable sensor with DAQ and LabView.
3. Experiment on measurement of displacement/deformation using DAQ and LabView
4. Design and Develop LabView programme for measurement of any parameter.
5. Modeling and analysis of mechanical system and its verification using MATLAB/SIMULINK software.
6. Speed control of pneumatic cylinder using meter-in and meter-out circuit
7. Ladder logic simulation using suitable software for logic gates.
8. Automatic reciprocation of double acting pneumatic cylinder using PLC ladder programming
9. PID control of mechanical system using suitable simulation software and its experimental verification
10. Design and develop any mechatronics application using software / hardware.
11. Demonstration of any one real life mechatronics system application

<b>Program:</b>		<b>B. Tech. (Mechanical)</b>		<b>Semester : VI</b>			
<b>Course :</b>		<b>Design Engineering Lab (PCC)</b>		<b>Code : BME6415</b>			
<b>Teaching scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>IE</b>	<b>TW</b>	<b>OR</b>	<b>Total</b>
--	2	-	1	-	25	25	50
<b>Prior knowledge of:</b> a. Engineering Mechanics, b. Manufacturing Process, c. Strength of Materials, d. CAMD I & II e. Machine Design, f. Kinematics & Theory of Machines, g. Dynamics of Machinery are essential							
<b>Course Objectives:</b> After completion of the course, students will have adequate background, conceptual clarity and knowledge of 1. To enable student, select materials and to design internal engine components. 2. To introduce student to optimum design and use optimization methods to design mechanical components. 3. To enable student to design machine tool gearbox. 4. To enable student to design material handling systems 5. To enable student to design cylinders and pressure vessels and to use IS code							
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. Design various mechanical systems like pressure vessels, machine tool gear boxes, material handling systems, etc. for the specifications stated/formulated 2. Handle system level projects from concept to product. 3. Understand the difference between component level design and system level design							
<b>Contents of Term Work:</b>							
	<b>Description</b>						<b>Duration (H)</b>
<b>The term work shall include one design project and two assignments as detailed below</b>							
<b>Design Project</b>	A group of 4-5 students will select any One projects out of the following 1. Design of Material Handling Equipment for industrial application. 2. Design of multispeed Gear box for machine tool. 3. Design of unfired pressure vessel for industrial application. 4. Design of multi stage Gear Speed reducer for applications such as Overhead cranes, Conveyers, Wind mill, automobiles etc.  The following are the contents of the submission for the design projects. <ul style="list-style-type: none"><li>The detailed <b>design report</b> containing, problem selection, problem analysis, problem definition, Solution based on all applicable design considerations, exclusive summary reflecting final dimensions of parts, Leaflet comprising the final specifications of the product designed, cost, Instructions to the users shall be submitted.</li><li><b>2D Part drawing</b> in two views (preferably one sectional view exploring internal features of the parts) with representation of geometric, dimensional tolerances, surface roughness symbols, other instructions such as the surface coating, heat treatments to be submitted</li><li><b>2D assembly drawing</b> in two views (preferably one sectional view exploring internal features of the assembly), with representation of overall dimensions, centre distances, dimensions ensuring alignment of parts in assembled condition, locations at which a particular fit is to be achieved, bill of materials representing clearly the OEM parts and parts to be manufactured in-house with correct representation of materials quantity, costing, Warrantee applicable to OEM parts</li></ul>						<b>20</b>

<b>Assignments</b>	<p>A group of 4-5 students will study these topics and submit a report and give a presentation containing minimum 8-10 slides.</p> <ol style="list-style-type: none"> <li>1. Design of principal parts of I C Engine using thermal considerations. (Dissimilar metals performance under elevated temperatures) (Analytical/ Numerical thermal analysis using simulation tools)</li> <li>2. Design for manufacture and assembly for Cylinder Block of I C Engines.</li> <li>3. Case study on Statistical Considerations in design.</li> <li>4. Case study on Ergonomic design modifications (Preferably using the Design software).</li> </ol>	<b>4</b>

<b>Program:</b>		<b>B. Tech. (Mechanical)</b>			<b>Semester : VI</b>		
<b>Course:</b>		<b>Non - Conventional Energy Systems (PEC-III)</b>			<b>Code : BME6503A</b>		
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Practical</b>	<b>Hour</b>	<b>Credit</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
3	--	3	3	20	30	50	100
<b>Prior Knowledge of:</b> a. Fundamental concepts and laws/governing equations of Engineering Thermodynamics, fluid mechanics. b. Principles of Heat Transfer c. Elements of Electrical Engineering are essential							
<b>Objectives:</b> 1. To provide a fundamental understanding of: <ul style="list-style-type: none"><li>Solar thermal and Photovoltaic energy systems and their performance characteristics</li><li>Wind power devices systems and their performance characteristics</li><li>Geothermal and Tidal power generation scheme</li></ul> 2. To be able to understand the application of these technologies to real-world requirements 3. To understand issues in the utilization and economic viability of renewable-powered devices and systems							
<b>Course Outcomes:</b> The students should be able to 1. Estimate solar radiation on a tilted surface. 2. Determine the fundamental performance of characteristics of solar thermal and photovoltaic energy generation. 3. Estimate the potential of wind resources. 4. To differentiate various routes of biomass energy conversion systems and demonstrate their operation. 5. Illustrate the operation of geothermal and tidal power plants and determine their financial viability.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	<b>Solar Energy</b> Worldwide energy use scenario, Current renewable energy installed capacity, Solar- Earth Geometry, Extraterrestrial Solar Radiation, and Spectral Distribution, Earth-sun angles, observer sun angles, Tilt factor, solar radiation intensity incident on tilted surface. Estimation of cost of energy of renewable energy system using discounted cash flow analysis						6
2.	<b>Applications of Solar Thermal Energy</b> Low-temperature applications - Water and air Heating, Flat Plate Collectors, losses, Performance evaluation, applications, Testing and Standards, Medium and high-temperature applications of Solar Thermal Energy – Concentrating collectors, classification, types and suitability, Solar thermal power generation -technologies, Storage issues and challenges in the commercialization.						6
3.	<b>Solar Photovoltaic Conversion</b> Basic Semiconductor Physics, A generic photovoltaic cell, Modules and Arrays, Impact of Temperature and Shading on the performance of a PV module, Standalone and grid connected Solar Photovoltaic Systems, components, system design						6
4.	<b>Wind energy</b> History and types of wind machines, Terminology, Dimensional analysis, Principles of Aerodynamics of a wind turbine blade, Maximum rotor efficiency (Betz Limit), Power output from practical wind turbine generators, wind data analysis and site selection considerations						6
5.	<b>Energy from biomass - Sources of biomass</b> – Different species, Conversion of biomass into fuels – Energy through fermentation – Pyrolysis, gasification and combustion – Aerobic and anaerobic bio-conversion, Properties of biomass <b>Biogas plants</b> – Types of plants – Design and operation – Properties and Characteristics of biogas. Biogas / Producer Gas Technology, Engines - Constructional, Operational & Performance aspects						6
6.	<b>Geothermal energy, and Tidal energy</b> <b>Geothermal Energy:</b> Availability of Geothermal Energy-size and Distribution, Recovery of Geothermal Energy, Various Types of Systems to use Geothermal Energy, Direct heat applications, Power Generation, economic analysis <b>Tidal Energy:</b> Introduction, Origin, and Nature of Tidal Energy, Advantages of Tidal Energy, Limitations of Tidal Energy, Tidal Energy Plant, Energy Potential Estimation, Ocean Tidal Energy Conversion Schemes.						6
	<b>Total</b>						<b>36</b>

<b>Prior knowledge of:</b> a. Metrology and Mechanical Measurement b. Mechatronics c. Solid Mechanics are essential							
<b>Course Objectives:</b> After completion of the course, students will have adequate background, conceptual clarity and knowledge of interdisciplinary/multidisciplinary principles related to: 1.To understand the basic concepts of biomechanics to study the human joint motions and forces. 2.To discuss the fundamentals in material science to solve challenges in the biomaterials domain. 3.To learn about some of the common sensors/transducers used in biomedical field 4.To study the reconstruction of 3D model from medical scan imaging and its FE analysis.							
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. Demonstrate the basic principles of biomechanics to analyze the movement, forces at a skeletal joint for various activities. 2. Demonstrate a general understanding of the use of artificial materials in humans/animals. 3. Learn the use of various sensors/transducers in medical applications. 4. Create 3D model from medical scan images using software. 5. Analyze the mechanical properties in biological tissues/implants/fixations.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
<b>1</b>	<b>Fundamental of Biomechanics:</b> Concepts of biomechanics, Nine principles for application of biomechanics, Anatomical representation terminology, Response of tissues to forces/loads, Mechanics of bone, Joint forces and motions.						<b>6</b>
<b>2</b>	<b>Biomaterials:</b> Biomaterials uses, Different biomaterials, Selection of biomaterials, Mechanical and performance requirements, Biomaterials properties.						<b>6</b>
<b>3</b>	<b>Sensors/Transducers in Biomedical Engineering:</b> Strain gauges, LVDT, Load cell, Biosensors – Enzyme, ECG, EMG.						<b>6</b>
<b>4</b>	<b>Medical imaging and 3D model generation:</b> Medical imaging techniques, Image parameters, General steps to generate 3D model from scan data, list of computing facilities, 3D model generation using software.						<b>6</b>
<b>5</b>	<b>Finite Element Method in Biomedical Engineering:</b> 3D modeling, Basics of FEA, Steps to setup bone model, Different loading configurations, Biomechanical analysis of hard tissues.						<b>6</b>
<b>6</b>	<b>Biomedical Applications:</b> Orthopaedics implants and fixations, General design procedure, Manufacturing processes, Other applications.						<b>6</b>

<b>Prior knowledge of:</b> a. Fluid Mechanics, b. Basic Thermodynamics are essential								
<b>Course Objectives:</b> Students are expected to study, 1. To study governing laws & symbols used in fluid power system 2. To study fluid power applications 3. To study working principles of various components used in hydraulic/ pneumatic systems. 4. To select different components from the manufacturers catalogue 5. To study Hydraulic/ Pneumatic circuit used in fluid power system 6. To design fluid power system for different applications.								
<b>Course Outcomes:</b> The students will be able to: 1. Understand the basics of fluid power & Symbols. 2. Analyze the performance of the pump & accumulator. 3. Select actuators & control valves for different applications 4. Construct hydraulic circuit diagrams for different industrial applications 5. Apply knowledge of pneumatics for the construction of a pneumatic circuit 6. Design appropriate system according to the requirement by using manufacturers' catalogue.								
<b>Detailed Syllabus:</b>								
<b>Unit</b>	<b>Description</b>							<b>Duration (H)</b>
<b>1.</b>	<b>Introduction to Fluid Power</b> Fluid power basics, advantages and limitations, Fluid power systems: Components, advantages, applications. Hydraulic fluids, Properties of fluids, selection of fluids, additives, the effect of temperature and pressure on hydraulic fluid, Seals: Types, selection, properties, material, compatibility of the seal with fluids. Fluid Conductors- pipes, hoses, connectors, Pipefittings, Sources of contamination and contamination control, Fluid conditioning through filters, strainers. Standard Symbols of fluid power components.							<b>6</b>
<b>2.</b>	<b>Sources of power- Pump &amp; Accumulator</b> Pumps - types, classification, the principle of working and constructional details of vane pumps, gear pumps, radial and axial plunger pumps, screw pumps, power and efficiency calculations, and characteristics curves. Selection of pumps for hydraulic power transmission. Power units and accessories: Types of power units, Reservoir assembly, constructional details, pressure switches, temperature switches, Accumulators: Types, selection/design procedure, application, Intensifier							<b>6</b>
<b>3.</b>	<b>Hydraulic Actuators &amp; Control valves</b> <b>Actuator:</b> Linear and Rotary actuators, types- linear, rotary, limited rotary actuator, constructional details, characteristics, Cylinder mountings, cushioning of cylinders. <b>Control valves:</b> Necessity of fluid control, Direction control valves - centre positions, methods of actuation, two-stage valves, Flow control valves - pressure and temperature compensated. Pressure control valves - pressure reducing valve, sequence valve, unloading valve, brake valve, back pressure valve, counterbalance valve, check valves, prefill valve, servo valves, cartridge valves, proportional valves.							<b>6</b>
<b>4.</b>	<b>Hydraulic Circuit</b> Need of hydraulic circuit, Structure of Hydraulic circuits, Simple reciprocating, regenerative, speed control (meter in, meter out and bleed off), sequencing, synchronization, traverse and feed, automatic reciprocating, fail-safe circuit, counterbalance circuit, actuator locking, unloading circuit, motor braking circuit.							<b>6</b>

5.	<b>Pneumatics</b> Principle of Pneumatics: Laws of compression, Comparison of Pneumatics with Hydraulic power transmissions, types of compressors, selection of compressors, compressed air distribution system, Types of filters, regulators, lubricators, mufflers, dryers, Pressure regulating valves, Direction control valves, two-way, three-way, four-way valves. Solenoid operated valves, push-button, lever control valves, two pressure valve, quick exhaust valve and time delay valves, electro-pneumatics, Pneumatic actuators-rotary & reciprocating, Air motors- radial piston, vane, axial piston, shuttle valve, Speed regulating methods, pneumatic circuits, reciprocating, cascading time delay etc.	6
6.	<b>System Design</b> Calculation of piston velocity, thrust under static and dynamic applications, considering friction, inertia loads, design considerations for cylinders, Selection of different components such as reservoir, various valves, actuators, filters, pumps based on a design by using manufacturer's catalogues, Design of hydraulic circuits for practical application.	6

Program:	B. Tech. (Mechanical)			Semester: VI			
Course:	Industrial Engineering (PEC - III)			Code: BME6503D			
Teaching Scheme				Evaluation Scheme			
Lecture	Practical	Hours	Credit	IE	MTE	ETE	Total
3	-	3	3	20	30	50	100
<b>Prior knowledge of</b> a. Manufacturing Science b. Materials Engineering are essential							
<b>Course Objectives:</b> 1. To introduce the concepts, principles and framework of contents of Industrial Engineering. 2. To acquaint the students with various productivity enhancement techniques. 3. To acquaint the students with different aspects of Production Planning and Control and Facility Design. 4. To introduce the concepts of various cost accounting and financial management practices as applied in industries. 5. To acquaint the students with different aspects of Human Resource activities and Industrial Safety rules.							
<b>Course Outcomes:</b> 1. Apply principles of management and evaluate productivity of an organization/Scenario. 2. Apply different steps in method study/use different Recording methods to an operation. 3. Determine work content and standard time using different methods of work measurement including developing an understanding of Rating. 4. Apply/use different techniques / concepts of production planning and control. 5. Apply different techniques / concepts of work system design and facilities design pertinent to manufacturing industry. 6. Perform break-even analysis for investment decisions.							
<b>Detailed Syllabus:</b>							
Unit	Description						Duration (H)
1	<b>Introduction to Industrial Engineering and Productivity</b> Definition and Role of Industrial Engineering, Functions of management, Types of production systems and organization structure. Measurement of productivity: Factors affecting the productivity, Productivity improvement techniques, Productivity Models and Index. Introduction to Value Engineering and Value Analysis.						6
2	<b>Method Study</b> Work Study: Definition, objective and scope of work-study, Human factors in work-study. Method Study: Definition, objective and scope of method study, work content, activity recording and exam aids, micro motion study. Applied Anthropometry, Work-Space Design, and Seating,						6
3	<b>Work Measurements</b> Work Measurements: Definition, objectives and uses, Work measurement techniques. Work Sampling: Need, confidence levels, sample size determinations, random observation, conducting study with the simple problems. Time Study: Definition, time study equipment, selection of job, steps in time study. Breaking jobs into elements, recording information, Rating and standard rating, standard performance, scales of rating, allowances and standard time determination. Introduction to PMTS and MTM: (Numerical), Introduction to MOST.						6
4	<b>Production Planning and Control</b> Introduction: Types of production systems, Need and functions of PPC, Aggregate production planning. Capacity Planning, ERP: Modules, Master Production Schedule, MRP and MRP-II. Forecasting Techniques: Causal and time series models, moving average, exponential smoothing, trend and seasonality (Numerical), Demand Control strategies (MTO, MTA, MTS). Introduction to Supply Chain Management: Basic terminologies.						6

5	<b>Plant Location and Layout</b> Plant Location : Need and factors influencing plant location, Plant Layout: Objectives, principles, types of plant layouts, Introduction to Assembly Line Balancing and Layout parameters to evaluate. Introduction to computer aided ergonomic analysis of workstation. Assessment of postures and identification of risks to body regions. Inventory control and Management: Types of inventories, Need of inventories, terminology, costs, Inventory Models: Basic production models, (with and without shortage and discount), ABC, VED Analysis.	6
6	<b>Costing and Human Factor in Industrial Engineering</b> Introduction to Marginal Costing: Elements of Cost, Break-Even Analysis. Techniques for Evaluation of capital investments. Human factors: Human Error, Accidents, and Safety, Human relation in industry, Performance appraisal, Human Factors in Systems Design	6
	<b>Total</b>	<b>36</b>

<b>3</b>	<b>-</b>	<b>-</b>	<b>3</b>	<b>20</b>	<b>30</b>	<b>50</b>	<b>-</b>	<b>100</b>
<b>Prior knowledge:</b> a. Machine Design b. Kinematics and Theory of Machines c. Heat Transfer are essential								
<b>Course Objectives:</b> To enable students 1. To design flexible drives for industrial applications. 2. To design automotive clutches and brakes. 3. To design gears against fluctuating bending stresses and fluctuating contact stresses. 4. To design the work gears for industrial applications. 5. To analyze the Power Split devices used in Hybrid Electric Vehicles.								
<b>Course Outcomes:</b> The student will be able to exhibit 1. Ability to design the flexible drives for the industrial applications. 2. Ability to design the automotive clutches and brakes. 3. Ability to design the helical and bevel gears against fluctuating bending stresses and contact stresses. 4. Ability to design Worm gears using IS- 1443-1974 and thermal considerations for the industrial applications. 5. Ability to design the constant mesh gearboxes for industrial applications. 6. Ability to analyze the power split devices used in HEVs.								
<b>Detailed Syllabus:</b>								
<b>Unit</b>	<b>Description</b>							<b>Duration (H)</b>
<b>1</b>	<b>Design of Flexible Drives:</b> Design of Flat belts and pulleys — Selection of V belts and pulleys — Selection of hoisting wire ropes and pulleys — Design of Transmission chains and Sprockets.							<b>6</b>
<b>2</b>	<b>Design of Clutches and Brakes:</b> Design of friction clutches for maximum torque transmission based on wear and thermal consideration. Design of disc and drum brakes							<b>6</b>
<b>3</b>	<b>Design of Helical and Bevel Gears:</b> Design of helical and bevel gears based on fluctuating bending strength and pitting strength.							<b>6</b>
<b>4</b>	<b>Design of Worm gears:</b> Design of worm gears using IS 1443-1974, Thermal rating.							<b>6</b>
<b>5</b>	<b>Design of Gearboxes:</b> Design of constant mesh single/ multi speed gearboxes with multiple stages. Gearbox components, mountings and accessories.							<b>6</b>
<b>6</b>	<b>Transmission systems in Hybrid Electric Vehicles:</b> Power Split Devices in HEVs, Speed and torque analysis of PSD.							<b>6</b>
	<b>Total</b>							<b>36</b>

<b>Program:</b>		<b>B. Tech. (Mechanical)</b>				<b>Semester: VI</b>		
<b>Course:</b>		<b>Alternative Energy Sources for I. C. Engines (PEC- III)</b>				<b>Code: BME6503F</b>		
<b>Teaching Scheme/week</b>				<b>Evaluation Scheme</b>				
<b>Lecture</b>	<b>Tutorial</b>	<b>Practical</b>	<b>Credit</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>TW</b>	<b>Total</b>
3	-	-	3	20	30	50	-	100
<b>Prior knowledge:</b> a. Combustion in S. I. and C. I. Engines b. Fuel Supply systems of S. I. and C. I. Engines are essential								
<b>Course Objectives:</b> To enable students 1. To get familiar with requirements of normal combustion in I.C. Engines 2. To understand the need of alternative fuel 3. To learn the properties, production methods, engine modifications, performance and emission characteristics by the use of various alternative fuels like alcohols, natural gas, biodiesel, hydrogen etc.								
<b>Course Outcomes:</b> The student will be able to 1. Correlate the properties of alternative fuels to the requirements of I. C. Engines 2. Appreciate the need of alternative fuels for I.C. engines in the current energy scenario. 3. Suggest engine modification for the use of alcohols as alternative fuels and Analyze the engine performance and emission characteristics 4. Suggest engine modification for the use of biodiesel as alternative fuels and Analyze the engine performance and emission characteristics 5. Suggest engine modification for the use of natural gases as alternative fuels and Analyze the engine performance and emission characteristics 6. Suggest engine modification for the use of hydrogen as an alternative fuel and Analyze the engine performance and emission characteristics								
<b>Detailed Syllabus:</b>								
<b>Unit</b>	<b>Description</b>							<b>Duration (H)</b>
1	<b>Introduction:</b> A review of working process and stages of combustion of I.C. Engines, requirements of normal combustion in S.I. and C. I. engine. Properties of different types of fuel related to their utilization as an I. C. Engines Fuel (Rating of fuel, Ignition temperature, volatility, Calorific Value etc.)							6
2	<b>Need for Alternative Fuels:</b> Sources of fossil fuel, scope of availability of fossil fuel in future. Effects of constituents of Exhaust gas emission on environmental condition of earth (UBHC , CO2, CO, NOx, SOx) Green house effect, Carbon foot print and Carbon credit calculations. Emission norms as per Bharat Standard up to BS – IV							6
3	<b>Alcohols:</b> Sources of Methanol and Ethanol, methods production. Properties of methanol & ethanol as engine fuels, Engine modifications required the use of alcohols in I. C. engines, Engine performance of methanol/ethanol blends with gasoline. Emulsification of alcohol and diesel. Dual fuel systems, emission characteristics with blending of Alcohol.							6
4	<b>Bio Diesels :</b> Production of Bio Diesel from vegetable oils (Karanji , Neemseed, Sunflower , Soyabeen, Jatropha seeds). Process of separation of Bio Diesel. Properties Biodiesel compared to Diesel, and performance of Engine with biodiesel and Diesel-biodiesel blend.							6
5	<b>Natural Gas:</b> <b>Bio Gas :</b> Production of biogas from municipal wastes and other sources Composition, Properties of Bio-gas as an alternative fuel for I.C. Engines. Fuel system modifications for Usage of Biogas in SI engine & CI engine. Dual fuel operation in C. I. Engine, effect on performance, emission, cost and safety. <b>LPG &amp; CNG:</b> Properties of LPG & CNG as engine fuels, fuel metering systems, combustion characteristics, effect on performance, emission, cost and safety.							6
6	<b>Hydrogen:</b> Properties, Sources and methods of Production of Hydrogen, Storage and Transportation of hydrogen. Combustion with hydrogen, safety aspects, engine/vehicle modifications required. <b>Fuel Cells:</b> Fuel cells principle, working, Thermodynamic analysis, Types, Fuel cell application in automobiles, Power rating, and performance, Layout of fuel cell vehicle.							6
	<b>Total</b>							<b>36</b>

**Text Books:**

3	-	-	3	20	30	50	100
<b>Prior knowledge:</b> a. Engineering Mechanics b. Applied Mathematics c. Materials Engineering d. Strength of Materials e. Manufacturing Practices f. Design of Machine Elements g. Kinematics and Theory of Machines. are essential							
<b>Course Objectives:</b> This course aims at enabling the students to 1. To develop competency for system visualization and design. 2. To enable student to select materials and to design internal engine components. 3. To enable student to design cylinders and pressure vessels and to use IS code. 4. To enable student to design machine tool gearbox. 5. To enable student to design material handling systems.							
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. Understand the difference between component level design and system level design. 2. Design various mechanical systems like automotive engine, pressure vessels, machine tool gear boxes, material handling systems, etc. for the specifications stated/formulated. 3. Handle system level projects from concept to product.							
<b>Detailed Syllabus: Module No I is compulsory and any two modules from remaining</b>							
<b>Module</b>	<b>Description</b>						<b>Duration (H)</b>
<b>1</b>	<b>Design of I. C. Engine</b> Introduction to selection of material for I. C. engine components, Design of cylinder and cylinder head, Construction of cylinder liners, Design of piston and piston-pins, rings, Design of connecting rod, Design of crank-shaft and crank-pin, Design of flywheel. Design for Manufacture and assembly of IC Engine parts						<b>12</b>
<b>2</b>	<b>Design of Unfired pressure vessel</b> <b>Design of Cylinders:</b> Thin and thick cylinders, Lame's equation, Clavarino's and Bernie's equations, Auto-fretage and compound cylinders. <b>Design of Unfired Pressure vessel :</b> Classification of pressure vessels as per IS code 2825-1969, Categories and types of welded joints, Weld joint efficiency, Stresses induced in pressure vessels, materials for pressure vessel, Design of cylindrical shells and end closures as per code, Design of nozzles and openings in pressure vessels, Types of vessel supports.						<b>12</b>
<b>3</b>	<b>Machine Tool Gearbox Design</b> Introduction to machine tool gearboxes, Design and its applications, Basic considerations in design of drives, Determination of variable speed range, graphical representation of speed and structure diagram, ray diagram, selection of optimum ray diagram, gearing diagram, deviation diagram.						<b>12</b>
<b>4</b>	<b>Material Handling System Design</b> System concept, basic principles, Classification of conveyors, Objectives of material handling system, Unit and bulk load. Belt conveyors, Selection Flat and V belt from manufacture's catalogue, Troughed belt conveyors, Capacity of conveyor, Rubber covered and fabric ply belts, belt tensions, Conveyor pulleys, belt idlers, tension take-up systems, Power requirement of belt conveyors for frictional resistance of idler and pulleys. Selection of wires and rope drive from manufacture's catalogue						<b>12</b>
	<b>Total</b>						<b>36</b>

Program:	B. Tech. (AS&H)			Semester : VI			
Course :	Multivariate Data Analysis Using R (OEC-III)			Code : BAS6608			
Teaching Scheme				Evaluation Scheme			
Lecture	Practical	Tutorial	Credit	IE	MTE	ETE	Total
3	-	-	3	20	30*	50*	100
<b>Prior Knowledge of</b> a. Descriptive Statistics b. Inferential Statistics c. Probability are essential							
<b>Course Objectives:</b> This course aims at enabling the students to learn multivariate data collection, visualization, and preprocessing techniques for data science.							
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. <b>Apply</b> data preprocessing methods in R and generate quality data for analysis. 2. <b>Implement</b> R packages and related functions to data science to analyze multivariate data. 3. <b>Apply</b> different data visualization techniques to understand the multivariate data. 4. <b>Analyze</b> the multivariate data using dependent analysis methods using the R. 5. <b>Analyze</b> the multivariate data using independent analysis methods using the R. 6. <b>Develop</b> a model for Prediction and Decision Making for a data set.							
<b>Detailed Syllabus:</b>							
Unit	Description						Duration (H)
1.	Data Wrangling: Understanding the multivariate data, Standardizing Variables, Accessing Databases with R Software, Merging multiple data sources into a single dataset for analysis, Dealing with Missing values, dealing with extreme outliers in data, discrepancies or removing.						6
2.	Multivariate Data and Multivariate Analysis : Calculating Summary Statistics for Multivariate Data: Means and Variances Per Group, Between-groups Variance and Within-groups Variance for a Variable, Between-groups Covariance and Within-groups Covariance for Two Variables, Calculating Correlations for Multivariate Data, The multivariate normal density function.						6
3.	Multivariate Data Visualization in R Software: Geometric projection techniques: Scatter plot matrix, Hyper box, Trellis display, Parallel coordinates, Icon-based techniques: Chernoff faces, Stick figures, Star plots, Color icons, Pixel-oriented techniques: Query-independent techniques: visualize the entire dataset, Query-dependent techniques: visualize a subset of data that are relevant to the context of a specific user query, Hierarchical techniques, Hybrid techniques						6
4.	Dependent Analysis: Multiple linear regression, Conjoint Analysis, Multiple Discriminant Analysis, Linear Probability Analysis, Multivariate analysis of variance (MANOVA), Canonical Correlation Analysis, Structural Equation Modeling						6
5.	Independent Analysis: Factor Analysis: Factor analysis model, The k-factor analysis model, Estimating the parameters in the k-factor analysis model. Cluster Analysis: Cluster analysis, K-means clustering, Displaying clustering solutions graphically, multidimensional Scaling, Correspondence Analysis						6
6.	Multidimensional Scaling: Models for proximity data, Spatial models for proximities: Multidimensional scaling, Classical multidimensional scaling, Non-metric multidimensional scaling. Linear Discriminant Analysis : Loadings for the Discriminant Functions, Separation Achieved by the Discriminant Functions, A Stacked Histogram of the LDA Values, Scatter plots of the Discriminant Functions, Allocation Rules and Misclassification Rate.						6
	Total						36

<b>Prior Knowledge of:</b> Surveying and GPS is essential.							
<b>Course Objectives:</b> After Completing this course, student will have adequate background : 1. To comprehend fundamentals and principles of RS and GIS techniques. 2. To enhance students' capacity to interpret images and extract information of earth surface from multi-resolution imagery at multi-scale level. 3. To develop skills of Image processing and GIS 4. To utilize RS and GIS techniques in Engineering Geology and civil engineering. 5. To study satellite image processing, satellite image interpretation, digitization and generation of thematic maps in a GIS. 6. To learn buffering and layer analysis for civil engineering applications							
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. Articulate fundamentals and principles of RS techniques. 2. Demonstrate the knowledge of remote sensing and sensor characteristics. 3. Distinguish working of various spaces-based positioning systems. 4. Analyze the RS data and image processing to utilize in civil engineering 5. Explain fundamentals and applications of RS and GIS 6. Acquire skills of data processing and its applications using GIS							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	<b>Introduction to Remote Sensing:</b> Definition and scope, history and development of remote sensing technology, electromagnetic radiation (EMR) and electromagnetic spectrum, EMR interaction with atmosphere and earth surface; atmospheric window, RS platforms, elements of remote sensing for visual interpretation viz. tone, shape, size, pattern, texture, shadow and association, applications in civil engineering/town planning						6
2.	<b>Remote Sensing Satellites and Sensor Characteristics:</b> Types and their characteristics, types of sensors, orbital and sensor characteristics of major earth resource satellites, Indian remote sensing satellite programs, introduction to various open-source satellite data portals, global satellite programs, sensor classification, applications of sensor, concept of Swath & Nadir, resolutions, digital image. Introduction to spatial resolution, spectral resolution, radiometric resolution and temporal resolution, visual image interpretation, image interpretation						6
3.	<b>GPS and GNSS:</b> Introduction to GNSS and Types, IRNSS, GPS, GPS components, differential GPS, types of GPS tracking, application of GNSS in surveying, mapping and navigation						6
4.	<b>Image Processing and Analysis:</b> Digital image, visual image interpretation, image interpretation keys, concept of spectral signatures curve, digital image processing, preprocessing and post processing, image registration, image enhancement, image transformations, digital image classification (supervised & unsupervised). Digital elevation model (DEM) and its derivatives, triangular irregular network model (TIN) and other models & their applications.						6
5.	<b>Fundamentals of GIS:</b> Geographic information system, definition, spatial and non-spatial data, data inputs, data storage and retrieval, data transformation, Introduction to cloud computing (types & applications), data reporting, advantages of GIS, essential elements of GIS hardware, software GIS data types, applications of RS and GIS in civil engineering, hydrogeology, engineering geology, surveying and mapping.						6

<b>6.</b>	<b>GIS Data and Case Studies:</b> GIS data types and data representation, data acquisition, geo-referencing of data, projection systems, raster and vector data, raster to vector conversion, attribute data models and its types, remote sensing data in GIS, GIS database and database management system. Case studies:	<b>6</b>

<b>Pre-requisite:</b>							
a. Building Planning, and Construction Materials is essential							
<b>Objectives:</b>							
After Completing this course, student will have adequate background to understand and solve the problem involving :							
1. To develop concepts of management of building services provisions							
2. To learn the synchronization of construction activities with installation of building services							
3. To study the suitable electrical and mechanical services, fire protection, acoustic and sound Insulations							
<b>Outcomes:</b>							
After learning the course, the students should be able to:							
1. Apply building services provisions							
2. Execute the construction activities with installation of building services.							
3. Distinguish the suitable electrical as well mechanical services for particular requirements of buildings.							
4. Design the Fire Protection, Acoustic and Sound Insulations.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
<b>1</b>	<b>Introduction to Building Services:</b> Definitions, Objective and uses of services, Applications of services for different types building considering, Classification of building services, Types of services and selection of appropriate services for given project.						<b>6</b>
<b>2</b>	<b>Building Ventilation:</b> Natural and artificial lighting principles and factors, Arrangement of luminaries, Distribution of illumination, Utilization factors, Necessity of Ventilation Types – Natural and Mechanical Factors to be considered in the design of Ventilation.						<b>6</b>
<b>3</b>	<b>Electrical Services &amp; Mechanical Services in Buildings:</b> Electrical services in the building Technical terms and symbols for electrical installations and Accessories of wiring, Systems of wiring Plumbing & Air Conditioning Air Conditioning Air Distribution system, Cleaners,						<b>6</b>
<b>4</b>	<b>Fire Protection, Acoustic and Sound Insulations</b> : Introduction, Causes of fire and Effects of fire, General Requirements of Fire Resisting building as per IS and NBC 2005, Requirement of good Acoustic, Various sound absorbent, Factors to be followed for noise control in residential building.						<b>6</b>
<b>5</b>	<b>Water and Sanitation</b> Water quality, Purification and treatment- water supply systems-distribution systems municipal bye laws and regulations, Rain Water Harvesting Sanitation in buildings-arrangement of sewerage systems in housing						<b>6</b>
<b>6</b>	<b>Building Maintenance :</b> Role of maintenance in durability and serviceability of buildings Economic aspects of maintenance. Different types of maintenance						<b>6</b>
						<b>Total</b>	<b>36</b>

<b>Prior Knowledge of:</b> 1. Physics 2. Mathematics 3. Programming Language							
<b>Course Objectives:</b> After Completing this course, student will have adequate background : 1. To understand the concept of smart city and associated challenges 2. To understand latest technologies used in intelligent building 3. To understand the concepts of Internet of Things and able to build IoT applications 4. To learn the programming and use of Arduino and Raspberry Pi boards for Smart Cities							
<b>Course Outcomes:</b> After learning the course, the students will be able: 1. To understand the concept of smart city and associated challenges 2. To understand latest technologies used in intelligent building 3. To program and configure Arduino boards for various designs. 4. To do Python programming and interfacing for Raspberry Pi. 5. To design IoT applications in different domains							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
<b>1.</b>	<b>Introduction to Smart cities</b> Introduction to city planning, Concept, Principle stakeholders, key trends in smart cities developments						<b>6</b>
<b>2.</b>	<b>Smart Cities Regulations</b> Understanding smart cities, Global Standards and performance benchmarks, Practice codes for smart city development						<b>6</b>
<b>3.</b>	<b>Smart Cities Planning and Development</b> Smart city planning and development, Dimension of smart cities, Financing smart cities development, Governance of smart cities						<b>6</b>
<b>4.</b>	<b>IoT in Construction</b> Introduction to Internet of Things, Characteristics of IoT, Physical design of IoT, Functional blocks of IoT, Sensing, Actuation, Basics of Networking, Communication Protocols, Sensor Networks.						<b>6</b>
<b>5.</b>	Introduction to Arduino Programming, Integration of Sensors and Actuators with Arduino for smart city applications						<b>6</b>
<b>6.</b>	<b>Introduction to Python and Raspberry pi for Smart Cities</b> Python programming, Introduction to Raspberry Pi, Interfacing Raspberry Pi with basic peripherals, Implementation of IoT with Raspberry Pi for Smart Cities and Smart Homes						<b>6</b>
	<b>Total</b>						<b>36</b>

<b>Program:</b>		<b>B. Tech. (Civil)</b>			<b>Semester : VI</b>		
<b>Course :</b>		<b>Mechanical Electrical Plumbing (MEP) Systems (OEC-IV)</b>			<b>Code: BCI6604B</b>		
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Tutorial</b>	<b>Credit</b>	<b>Hours</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
3	-	3	3	20	30	50	100
<b>Prior Knowledge of:</b> a. Basics of air conditioning b. Basics of Electrical Engineering c. Basics of Mechanical Engineering							
<b>Course Objectives:</b> After Completing this course, student will have adequate background : 1. To learn the concept of HVAC 2. To recognize the technologies used in electrical services 3. To understand the concepts of plumbing services 4. To learn the fire protection system							
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. Analyse and design HVAC system 2. Implement the technologies used in electrical services 3. Apply plumbing services 4. Design fire protection system							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	<b>HVAC</b> Introduction to HVAC, Basic Components of Air-Conditioning and Refrigeration machines, Classification of Air-Conditioning System , Categories of Air Conditioning , Study of sychometric Charts , Load Calculation, Air Distribution System, Static Pressure Calculation, Hydronic System, VRF/VRV System, Air Conditioning Concepts, Ventilation systems.						6
2.	<b>Basics of Electrical Implementations</b> General, Codes & Standards to be followed, Electrical equipment's and its application used in the installation, Means of electrical distribution for installation, Major electrical loads used in the installation, Electrical design calculations, Various design stages & Sequence of electrical design procedure.						6
3.	<b>Electrical Analysis and Design</b> Major electrical loads used in the installation, Electrical design calculations, Various design stages & Sequence of electrical design procedure.						6
4.	<b>Plumbing</b> Plumbing Systems, Design of Domestic Water Supply and Distribution System, Design of Sanitary Drainage System, Drawings – Plumbing Layouts.						6
5.	<b>Fire Protection system</b> Introduction To Fire Fighting, Classification Of Fire (Description), Fire Extinguisher Types- Using Procedure And General Maintenance, Fire Protection Systems-1. Active 2. Passive Refuge Areas – Rules & Regulations.						6
6.	<b>Fire Alarm System</b> Designing of fire alarm system, NFPA, NBA & FSAI Code For Fire Fighting System Designing, Fire Fighting, Hydraulic Calculation For High Rise Buildings, Fire norms for new project construction.						6
	<b>Total</b>						<b>36</b>
<b>Text Books:</b> 1. Design of Mechanical & Electrical Systems. Trost, Pearson Publishing, ISBN 978-0-13097235-4 . 2. <b>Program:</b>	<b>B. Tech. (Computer)</b>			<b>Semester: VI</b>			
<b>Course:</b>	<b>Information Security (OEC-III)</b>			<b>Code: BCE6603</b>			
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
3	-	-	3	20	30	50	100
<b>Course Objectives:</b> 1. To offer an understanding of principle concepts, central topics and basic approaches in information and cyber security. 2. To make students aware about the basics and different algorithms of Cryptography. 3. To acquire knowledge of standard algorithms and protocols employed to provide confidentiality, integrity and authenticity.							
<b>Course Outcomes:</b> After learning the course, the students should be able to: 1. Identify computer and network security threats, classify the threats and develop a security model to prevent, detect and recover from the attacks. 2. Propose the security Services and Mechanisms for preventing the different security attacks. 3. Use Symmetric key Cryptographic Techniques to encrypt and decrypt the messages. 4. Use Asymmetric key Cryptographic Techniques to encrypt and decrypt the messages. 5. Use different Hash Techniques to provide the Authentication and to check the Integrity of messages in transit. 6. Use Message Authentication Code to provide Authentication.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	<b>Security Basics</b> <b>Computer Security Concepts</b> - Need, Security Vs Privacy, Confidentiality, Integrity & Availability (CIA), additional Security considerations, The challenges of Security, Threats, Attacks and Assets, Operational Model of Security; <b>Case Study: Study of Campus Network and identification of possible Threats, Attacks and Assets</b>						5
2.	<b>Encryption Techniques</b> <b>Basics:</b> Symmetric & Asymmetric Cipher Model; Cryptography; Cryptanalysis and Brute-Force Attack <b>Classical Encryption Techniques</b> - Substitution Techniques: Caesar Cipher, Mono-alphabetic Ciphers, Poly-alphabetic Ciphers, Playfair Cipher; Transposition Techniques: Rail Fense Technique						5
3.	<b>Symmetric Cipher</b> <b>Traditional Cipher Structure:</b> Stream ciphers and Block Ciphers; Feistel Cipher Structure <b>Data Encryption Standard (DES):</b> DES Encryption; DES Decryption; DES Example; Strength of DES; <b>Block Cipher Modes of Operations:</b> Electronic Code Book (ECB), Cipher Block Chaining Mode(CBC), Cipher Feedback Mode (CFB), Output Feedback Mode (OFB), Counter Mode (CTR)						7
4.	<b>Asymmetric Cipher</b> <b>Public-Key Cryptosystems:</b> Secrecy, authentication, secrecy & authentication; applications, requirements; <b>The RSA Algorithm:</b> Algorithm, Example, The security of RSA; <b>Diffie-Hellman Key Exchange:</b> The Algorithm, Key Exchange Protocol, Man-in-the-middle attack;						6
5.	<b>Key Management and Distribution</b> Symmetric Key Distribution using Symmetric key Encryption, Symmetric Key Distribution using asymmetric key Encryption, Distribution of Public Keys. <b>Case Study: Introduction to X.509</b>						6
6.	<b>Cryptographic Hash Functions &amp; Message Authentication Codes</b> <b>Cryptographic Hash Functions:</b> Applications, Secure Hash Algorithm (SHA)-512, MD5 <b>Message Authentication Codes (MAC):</b> Requirements, Functions, Security of MACs						7
	<b>Total</b>						<b>36</b>

## Department of Mechanical Engineering

<b>Program:</b>		<b>B. Tech. (Computer)</b>			<b>Semester: VI</b>		
<b>Course:</b>		<b>Principles of Software Engineering (OEC-III)</b>			<b>Code: BCE6604</b>		
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
3	-	-	3	20	30	50	100
<b>Course Objectives:</b> The course is aiming to impart conceptual clarity among students about. <ol style="list-style-type: none"><li>1. The fundamental phases of the Software Development Life-cycle (SDLC).</li><li>2. Selection of an appropriate process model for specific software project development.</li><li>3. Comprehension of methods for capturing, specifying, and analyzing software requirements.</li><li>4. Applying Design principles to software project development.</li><li>5. Comprehension of UML Diagrams for software project development.</li><li>6. The fundamental understanding of agile process model.</li></ol>							
<b>Course Outcomes:</b> After learning the course, the students should be able to: <ol style="list-style-type: none"><li>1. Comprehend the fundamental phases of the Software Development Life-cycle (SDLC).</li><li>2. Compare and select an appropriate process model for specific software project development.</li><li>3. Comprehend methods for capturing, specifying, and analyzing software requirements.</li><li>4. Apply Design principles to software project development.</li><li>5. Comprehend UML Diagrams for software project development.</li><li>6. Relate the basics of agile process model for the development of software projects.</li></ol>							
<b>Detailed Syllabus</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	<b>Introduction To Software Engineering</b> Definition of Software, Software Application Domains, Software engineering layers, Software engineering practice, The Essence of Practice, General Principles, Software development myths, Management myths, Customer myths, Practitioner’s myths, Software Development Life-cycle.						6
2.	<b>The Software Process</b> A Generic Process Model, Defining a Framework Activity, Perspective Process Model, Waterfall Model, V Model, Incremental Process Model, Evolutionary Process Models-Prototyping, The Spiral Model, Unified Process, Phases of the Unified Process						6
3.	<b>Requirements Analysis</b> Requirement Engineering, Requirements engineering tasks, Establishing the Groundwork-Eliciting Requirements, Collaborative Requirements Gathering, Quality Function Deployment, Usage Scenarios, Elicitation Work Products, Developing use cases.						6
4.	<b>Design Concepts</b> The design Process, Abstraction, Architecture, Separation of Concerns, Modularity, Information Hiding, Refinement, The design Model, Data Design Elements, Architectural Design Elements, Interface Design Elements.						6
5.	<b>Modeling with UML</b> Modeling Concepts and Diagrams, Introduction to UML, Use Case Diagrams, Class Diagrams, State chart Diagrams, Activity Diagrams, Package Diagram, Component Diagrams, Deployment Diagrams.						6
6.	<b>Agile development Process</b> Agile Process- Extreme Programming in agile development, Agile software development process Models, SCRUM – process flow, scrum roles, scrum cycle description, product backlog, sprint planning meeting, sprint backlog, sprint execution, daily scrum meeting.						6
	<b>Total</b>						<b>36</b>
<b>Text Books:</b> <ol style="list-style-type: none"><li>1. Roger S Pressman, "Software Engineering – A Practitioner’s Approach", Pearson Education, 7th Edition, ISBN 0073655783, 2010.</li><li>2. ## Department of Mechanical Engineering

<b>Program:</b>	<b>B. Tech. (Computer)</b>			<b>Semester: VI</b>			
<b>Course:</b>	<b>Fundamentals of Machine Learning (OEC-IV)</b>			<b>Code: BCE6605</b>			
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
3	-	-	3	20	30	50	100
<b>Prior knowledge of</b> a. Engineering Mathematics is essential.							
<b>Course Objectives:</b> 1. To introduce different machine learning primitives. 2. To introduce different preprocessing techniques to prepare training and testing data set 3. To solve regression problems using regression techniques. 4. To develop skills to understand nature of the problem and apply machine learning algorithm 5. To use classification algorithms to solve classification problems. 6. To introduce metrics and methods for Evaluating Classifier Performance							
<b>Course Outcomes:</b> After learning the course, the students should be able to: 1. Distinguish different machine learning primitives. 2. Use different data preprocessing techniques to prepare training and testing data set. 3. Apply data similarity and dissimilarity measures for statistical analysis. 4. Apply Association Rule Mining algorithms for market basket analysis. 5. Solve real world problems using regression techniques. 6. Apply classification algorithms to solve real world problems.							
<b>Detailed Syllabus:</b> <b>Note:</b> Case studies mentioned in Unit IV, Unit V and VI are just to get understanding to students, and will not be considered for evaluation.							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	<b>Introduction to Machine learning</b> Introduction to Machine learning, Machine Learning Approaches-Supervised Learning, Unsupervised Learning and Reinforcement Learning, Important Elements of Machine Learning-Data formats, Underfitting and Overfitting, Error measures, Creating training and testing datasets						6
2.	<b>Data Pre-Processing</b> Data, Information and Knowledge; Attribute Types: Nominal, Binary, Ordinal and Numeric attributes; Data Pre-processing: Data Cleaning, Data integration, Data transformation: Min-max normalization, z-score normalization and decimal scaling; data reduction, Data Discretization, Binning techniques for smoothing noise.						6
3.	<b>Measuring Data Similarity and Dissimilarity</b> Measuring Data Similarity and Dissimilarity, Proximity Measures for Nominal Attributes and Binary Attributes, Dissimilarity of Numeric Data: Euclidean distance and Manhattan distance; Cosine Similarity						5
4.	<b>Unsupervised Learning</b> <b>Association Rules Mining-</b> Market Basket Analysis, Frequent item set, Association Rules, Apriori Algorithm, Generating Association Rules from Frequent Item sets; <b>Clustering-</b> K-means: Finding optimal number of clusters <b>Case study of ML application:</b> Shopping mall application for Market Basket Analysis.						6
5.	<b>Supervised Learning- Regression</b> <b>Linear Regression-</b> Linear models, A bi-dimensional example, Linear Regression and higher dimensionality, Regularization-Ridge, Lasso <b>Logistic regression-</b> Linear classification, Logistic regression <b>Case study of ML applications:</b> Applications for house price prediction, Share Market						6
6.	<b>Supervised Learning- Classification</b> Naïve Bayes Classifier, Decision Tree Classification, K-Nearest Neighbor Classifier, Metrics for Evaluating Classifier Performance, Confusion Matrix, Evaluating the Accuracy of a Classifier: Holdout Method and Cross-Validation, ROC Curve <b>Case study of ML applications:</b> Applications in Agriculture sector, Health care domain using analytical tools such as WEKA/KNIME/R/SK-Learn						7
	<b>Total</b>						<b>36</b>

<b>Program:</b>		<b>B. Tech. (Computer)</b>			<b>Semester: VI</b>		
<b>Course:</b>		<b>JAVA Programming (OEC-IV)</b>			<b>Code: BCE6606</b>		
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Practical</b>	<b>Tutorial</b>	<b>Credit</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
3	-	-	3	20	30	50	100
<b>Prior knowledge of</b> a. Decision control structures, loop control structures, arrays, Functions, pointers, structure and union, searching and sorting techniques is essential.							
<b>Course Objectives:</b> 1. To understand various data types, conditional and looping constructs in Java. 2. To understand concepts of Java classes, various types of constructors in Java. 3. To use inheritance and polymorphism to solve real life problems. 4. To apply multi-threading concepts and collection framework. 5. Exemplify the usage of packages and implement the concepts of Applets and JavaFX.							
<b>Course Outcomes:</b> After learning the course, the students should be able to: 1. To comprehend basic Java concepts and JVM architecture. 2. To use Object-oriented programming concepts to solve real time problems. 3. To apply error handling mechanism using Exceptions in Java. 4. To use concepts of multithreading for synchronization in Java. 5. To use the string collection framework for various string operations. 6. To apply Java UI components for designing windows-based applications.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	<b>Introduction to Java programming</b> what is JAVA, History of JAVA, Java Virtual Machine, difference between JDK, JRE & JVM, Variables and data types, Control statements						6
2.	<b>Object-oriented programming concepts I</b> JAVA OOPs Concepts, Fields and Methods, Constructors, copy constructor, method overloading, method overriding, static keyword, this keyword						6
3.	<b>Object-oriented programming concepts II</b> Inheritance, Aggregation, Polymorphism, super keyword, final keyword, Abstract class, Interface, <b>Exceptions:</b> types of exception with examples, Try, catch, throw and throws in JAVA, flow control in try catch finally in JAVA						6
4.	<b>Java Multithreading</b> life cycle and states of thread, thread scheduler, creating thread, creating multiple threads, thread priorities, synchronization Enumerations fundamentals and example, type Wrappers <b>Collection Framework:</b> collection Interfaces, collection classes, working with Maps, Arrays, Legacy classes and Interfaces						6
5.	<b>Applet</b> Basics, architecture, applet skeleton, simple Applet Display method <b>SWING (JFC):</b> Introduction, Difference between AWT and SWING, Components hierarchy, Panes, Individual Swings components J Label, JButton, JTextField, JTextAres.						6
6.	<b>JavaFX</b> JavaFX Architecture, JavaFX Program Structure, Shapes, Effects, Layout Components, Properties and Bindings, Basic UI Controls, Graphics and Animation. <b>Case Study:</b> To develop real-time application using java concepts.						6
	<b>Total</b>						<b>36</b>

<b>Program:</b>		<b>B.Tech. (E&amp;TC)</b>			<b>Semester: VI</b>		
<b>Course:</b>		<b>Designing with Raspberry Pi (OEC-III)</b>			<b>Code: BET6601</b>		
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Tutorial</b>	<b>Credit</b>	<b>Hours</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
3	-	3	3	20	30	50	100
<b>Prior knowledge of</b> a. Basics of Python coding. b. Basics of Embedded C coding. c. Basics of Linux command. are essential							
<b>Objectives:</b> 1. To explain fundamentals of Raspberry pi (Rpi) and installation of OS in Rpi 2. To demonstrate the Python programming and interfacing of sensors and actuators with Rpi 3. To describe the Node-RED tool used in Rpi and its applications.							
<b>Outcomes:</b> After learning the course, the students should be able to: 1. Understand basic specifications of Raspberry Pi. 2. Complete Installation of OS in Raspberry Pi. 3. Program and interface Raspberry-Pi using Python programming. 4. Interface sensors and actuators with Rpi. 5. Use Node-RED Tool for Raspberry Pi programming . 6. Design IoT based applications with Python programming and Raspberry Pi .							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
<b>1</b>	<b>Getting started with Raspberry Pi</b> Basic functionality of Raspberry Pi board, Physical design and specifications, GPIO Pin description of Rpi, comparison of various Rpi models, Rpi as mini- computer.						<b>6</b>
<b>2</b>	<b>Bootting Up RPi- Operating System and Linux Commands</b> Introduction of various operating systems of Rpi, Installation of Raspbian/Noobs/OSMC operating system on Rpi, first boot and basic configuration of Rpi, Introduction to Linux commands required to configure Rpi, Overview of Graphic User Interface (GUI).						<b>6</b>
<b>3</b>	<b>Programming the Raspberry Pi</b> Introduction to Python programming language: Python Programming Environment,Python Expressions, Strings, Functions, Data types in python, importing libraries, flow control, conditional statement, Loops.						<b>6</b>
<b>4</b>	<b>Sensor and Actuator interfacing with Rpi</b> Sensor interfacing: Temperature and Humidity sensor (DHT11), PIR Motion sensor, obstacle detection using Ultrasonic sensor. Actuator interfacing: Electronic Relays, LED’s, Buzzers, DC Motor, Stepper motor, Servo Motor.						<b>6</b>
<b>5</b>	<b>Getting started with Node-RED tool on Rpi</b> Prerequisite for Node-RED, Installing and upgrading Node-RED, Running Node-RED app locally and as a service on network, auto-start on boot, opening the editor, installation of various libraries for Node-RED, adding node, add debug node, wire the nodes, deploy the flow.						<b>6</b>
<b>6</b>	<b>Case Study based following topics</b> Home Automation, Smart City, Smart Farming, Smart Transportation, Health and Lifestyle, Pollution Monitoring system						<b>6</b>
	<b>Total</b>						<b>36</b>

<b>Program:</b>	<b>B. Tech. (E&amp;TC)</b>			<b>Semester: VI</b>			
<b>Course:</b>	<b>Designing with Arduino platform (OEC-IV)</b>			<b>Code: BET6603</b>			
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>			
<b>Lecture</b>	<b>Tutorial</b>	<b>Credit</b>	<b>Hours</b>	<b>IE</b>	<b>MTE</b>	<b>ETE</b>	<b>Total</b>
3	-	3	3	20	30	50	100
<b>Prior knowledge of</b> a. Basic Programming Fundamentals is essential							
<b>Objectives:</b> 1. To make students aware of the Arduino platform in terms of the physical board and libraries and the IDE (Integrated Development Environment). 2. Explain how to prototype circuits with a breadboard. 3. Making students aware of the Arduino programming language and IDE. 4. Introducing Prototype circuits and connect peripherals to the Arduino.							
<b>Outcomes:</b> After learning the course, the students should be ableto: 1. Understand of features of Arduino board. 2. Apply Arduino board programming concepts. 3. Design and implement Digital and analog Input /Output controls using Arduino 4. Measure and analyze the Realtime parameters using Arduino. 5. Design Object detection using Arduino. 6. Realize Sensing Sound and distance measurement using Arduino.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1	<b>UNIT -1 KNOWING YOUR ARDIUNO:</b> Introduction, getting to know the Arduino Uno: Atmega328P, USB, Shields, getting to know the Arduino Uno: Pins, power, clock, Using the digital output pins, Using the digital input pins, Using the analog output pins, Using the analog input pins. Introduction: Serial (UART) communications, I <sup>2</sup> C (TWI) communications, SPI communications						6
2	<b>UNIT -2 ARDUINO IDE AND PROGRAMMING CONCEPTS.</b> An introduction to the Arduino IDE: Getting and installing the Arduino IDE and uploading a sketch to your Arduino. An introduction to Arduino programming, Understand the basic parts of an Arduino sketch, custom functions Creating custom functions and the return keyword, Using variables, constants, Introduction to control structures: The "if", "while", "For", "Switch" statement						6
3	<b>UNIT 3: ARDUINO PROGRAMMING HANDS ON</b> Digital input/output - how to read the state of a button control an LED, Analog input/ output - how to read the state of a potentiometer and create a fading LED, Introduction to the RGB (color) LED, Wiring the RGB LED, RGB LED: creating colors, using a library to control an RGB LED with PWM.						6
4	<b>UNIT 4: MEASURING LIGHT,COLOR AND TEMPERATURE WITH ARDUINO</b> Using Ultra -violet light sensor, RGB color sensor,DHT22 sensor to measure temperature and humidity, program and connect to Arduino.						6
5	<b>UNIT 5: DETECTING ACCELERATION, OBJECT DETECTION WITH INFRARED MOTION SENSOR.</b> Introduction to detecting acceleration with the ADXL335, Plugging the ADXL335 directly in the Arduino, and detect its orientation, A demonstration of using the PIR sensor with the Arduino						6
6	<b>UNIT 6: SENSING SOUND AND DISTANCE</b> Introduction to the ultrasonic distance sensor, Wiring and understanding Trigger and Echo, and calculating distance. Introduction to the analog sound sensor, A demonstration and sketch of the analog sound sensor and the digital sound sensor.						6
<b>Total</b>						<b>36</b>	

<b>Program:</b>	<b>B. Tech. (E&amp;TC)</b>				<b>Semester: VI</b>		
<b>Course:</b>	<b>Basics of Automotive Electronics (OEC-III)</b>				<b>Code: BET6602</b>		
<b>Teaching Scheme</b>				<b>Evaluation Scheme</b>

<b>Prior knowledge of:</b> Electrical and Electronics is essential.							
<b>Objectives:</b> 1. To introduce Electronics Control Unit(ECU) used in Automotive applications. 2. To explain processing principle of sensors and actuators used in automotive 3. To explore role of electronic systems in Active and passive safety systems.							
<b>Outcomes:</b> After learning the course, the students should be able to: 1. Understand the importance of electronics system in automotive design. 2. Design signal processing for sensors and actuators. 3. Design vehicle motion control systems. 4. Comprehend algorithms used in Engine Control System. 5. Realize role of electronics in Active and passive safety systems 6. Use automotive components, subsystems, and basics of Electronic Engine Control in automotive applications.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
<b>1</b>	<b>Automotive Systems Overview:</b> Automotive vehicle technology, Present trends in automobiles with emphasis on increasing role of electronics and software, Overview of typical automotive subsystems and components, Body, Chassis, and Powertrain Electronics						<b>5</b>
<b>2</b>	<b>Sensors :</b> Basic sensor arrangement, Types of sensors such as oxygen sensors, Crankshaft angle position sensors, Fuel metering/ vehicle speed sensors, Flow sensor, Temperature, Exhaust Gas Oxygen (O2/EGO), Air mass flow sensors, Throttle position sensor, Strain Gauge MAP sensor, Magnetic Reluctance Position Sensor, Hall effect Position Sensor, Engine Coolant Temperature (ECT) Sensor, Piezoelectric Knock Sensor. <b>Actuators :</b> Solenoids, Stepper Motors, Relays, Fuel Injector, EGR Actuator, Ignition System						<b>8</b>
<b>3</b>	<b>Vehicle Motion Control:</b> Typical Cruise Control System, Digital Cruise Control System, Digital Speed Sensor, Throttle Actuator, Digital Cruise Control configuration, Cruise Control Electronics (Digital only), Antilock Brake System (ABS)						<b>5</b>
<b>4</b>	<b>Engine Control System:</b> Algorithms for engine control including open loop and closed loop control system, Electronic ignition, EGR for exhaust emission control.						<b>7</b>
<b>5</b>	<b>Active and passive safety systems:</b> Body electronics including lighting control, Remote keyless entry, Immobilizers, Electronic instrument clusters and dashboard electronics, Antilock braking system, Computer vision based ADAS						<b>6</b>
<b>6</b>	<b>Future Automotive Electronic Systems:</b> Alternative Fuel Engines, Electric and Hybrid vehicles, Fuel cell powered cars, Collision Avoidance Radar warning Systems, Low tire pressure warning system, Voice Recognition Cell Phone dialing, Advanced Cruise Control, Stability Augmentation, Automatic driving Control						<b>5</b>
	<b>Total</b>						<b>36</b>

3	-	3	3	20	30	50	100
<b>Prior knowledge of</b> a. Automotive Electronics b. Communication systems are essential							
<b>Course Objectives:</b> 1. To introduce the students to basics of Automotive Communication Technologies. 2. To learn the basics of EVs, including EV Components, architecture and energy management. 3. To understand various topologies of EV communication system. 4. To evaluate the impact of EVs in Connected Mobility and Autonomous Mobility							
<b>Course Outcomes:</b> On completion of the course, learner will be able to– 1. Illustrate the EV Components and controlling units. 2. Understand the basics of EV Communication protocols & their need in e-Mobility business 3. Understand the fundamentals of EVSE Communication 4. Realize with Charging Communication in EVs 5. Apply the knowledge of e-Mobility through Indian Roadmap Perspective to various applications							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
<b>1</b>	<b>EV Basics</b> Overview of EVs and challenges, architecture of EVs, EV market and promotion, infrastructure needs, energy sources used in EVs & HEVs, medium of power transfer (conductive and wireless), wireless power transfer.						<b>6</b>
<b>2</b>	<b>EV Components</b> Battery Management System (BMS), BLDC Motors, Inverter Unit, Powertrain Unit and Couplers with Chassis, PDU (Power Distribution Unit), BCM (Body Control Module, ECU and Tuning Parameters.						<b>6</b>
<b>3</b>	<b>EV Communication protocols</b> Communication System in EV (CAN and LIN), V2V, V2G and its applications in power system, power saving & coordinated charging, layout of power converters, E-mobility business, electrification challenges						<b>6</b>
<b>4</b>	<b>Electric vehicle supply equipment (EVSE)</b> Basics of EVSE, EVSE Power Module selection and technical specification, Selection of EVSE Communication Protocol (PLC / Ethernet / Modbus/ CAN Module), communication gateway, Specification of open charge point protocol.						<b>6</b>
<b>5</b>	<b>Connectors and Charging Communication</b> Types of EV charging connector, EV Plug Standards, Selection and sizing of Common types of connectors and applications, Selection of AC and DC charger type, Communication Interface between charger and CMS.						<b>6</b>
<b>6</b>	<b>e-Mobility</b> CCS (Combined Charging System), CHAdeMO, Tesla, Connected Mobility and Autonomous Mobility, e-Mobility: Indian Roadmap Perspective, integration of EVs in smart grid, social dimensions of EVs.						<b>6</b>
	<b>Total</b>						<b>36</b>

3	-	-	3	20	30	50	100
<b>Prior knowledge of:</b> a. Computer Fundamentals b. Any one computer Language are essential.							
<b>Course Objectives:</b> 1. To write a valid standards-conformant HTML document involving a variety of element types, including hyperlinks, images, lists, tables, and forms 2. To use CSS to implement a variety of presentation effects in HTML and XML documents, including explicit positioning of elements 3. To demonstrate techniques for improving the accessibility of an HTML document 4. To learn the concepts commonly used in dynamic language programming, such as introspection, higher-order functions, and closures.							
<b>Course Outcomes:</b> After learning the course, the students will be able to: 1. Develop Static and Dynamic websites using technologies like HTML, CSS, Bootstrap. 2. Test and debug JavaScript web applications. 3. Develop a mobile website using JQuery Mobile. 4. Develop web applications with Front End & Back End Technologies. 5. Demonstrate the use of web scripting languages. 6. Build Responsive Web application using Angular Typescript							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	HTML: Getting started with HTML, Why HTML, Tags and Elements, Attributes, Properties, Headings list, Links, Tables, Images, HTML Form, Media (Audio, Video), Semantic HTML5 Elements. CSS: Types of CSS, How to use CSS, Properties, Classes, Child-Class (Nested CSS), Colors, Text, Background, Border, Margin, Padding, Positioning (flex, grid, inline, block), Animation, Transition.						6
2.	BOOTSTRAP: , CSS over Bootstrap, How to Use Bootstrap, Bootstrap Grid System, Bootstrap Responsive, Bootstrap Classes, Bootstrap Components (i.e., Button, Table, List, etc.),Bootstrap as a Cross Platform. W3C: What is W3C , How W3C handles/Supports Web Technologies.						6
3.	JavaScript: Introduction to Scripting languages, Introduction to JavaScript (JS), JS Variables and Constants, JS Variable Scopes, JS Data Types, JS Functions, JS Array, JS Object, JS Events. Advanced JavaScript: JSON - JSON Create, Key-Value Pair, JSON Access, JSON Array, JS Arrow Functions, JS Callback Functions, JS Promises, JS Async-Await Functions, JS Error Handling						6
4.	AJAX: Why AJAX, Call HTTP Methods Using AJAX, Data Sending, Data Receiving, AJAX Error Handling. JQUERY :Why JQuery, How to Use, DOM Manipulation with JQuery, Dynamic Content Change with JQuery, UI Design Using JQuery.						6
5.	Front-End Frameworks: Web Framework Types. MVC: What is MVC, MVC Architecture, MVC in Practical, MVC in Web Frameworks. TypeScript: Introduction to TypeScript (TS), Variables and Constants, Modules in TS.						6
6.	AngularVersion 10+: Angular CLI, Angular Architecture, Angular Project Structure, Angular Lifecycle, Angular Modules, Angular Components, Angular Data Binding, Directives and Pipes, Angular Services and Dependency Injections (DI), Angular Routers, Angular Forms. ReactJS: Introduction to ReactJS, React Components, Inter Components Communication, Components Styling, Routing, Redux- Architecture, Hooks- Basic hooks, useState() hook, useEffect() hook, useContext() hook						6
	<b>Total</b>						<b>36</b>

**Text Books:**

1. Ralph Moseley & M. T. Savaliya, “Developing Web Applications”, Wiley publications, ISBN 13: 978812653867
2. Jeremy McPeak & Paul Wilton, ” Beginning JavaScript”, Wrox Publication, ISBN-13: 978-0470525937

**Reference Books:**

<b>Prior knowledge of :</b>							
a. Java programming language is essential.							
<b>Course Objectives:</b>							
1. To learn a new mobile application development environment.							
2. To develop problem solving skills with mobile applications.							
3. To develop competency for the design, coding and debugging for mobile app development.							
4. To build the programming skills using 'Android Programming Language.							
<b>Course Outcomes:</b>							
After learning the course, the students will be able to:							
1. Explore the android environment for mobile application development.							
2. Apply event handling skills for problem solving in real life applications.							
3. Analyze different notification interfaces and apply the most appropriate one for solving problems.							
4. Identify file handling mechanism in android environment.							
5. Develop database and database control programming logical constructs of Android language for problem solving.							
6. Describe significant android services and their usage in solving real life problems.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	Unit-1 Introduction to Android Operating System Android OS design and Features – Android development framework, SDK features, Installing and running applications on Android Studio, Creating AVDs, Types of Android applications, Best practices in Android programming, Android tools. Android application components – Android Manifest file, Externalizing resources like values, themes, layouts, Menus etc, Resources for different devices and languages, Runtime Configuration Changes Android Application, Activities, Activity lifecycle,						6
2.	Unit-2 Android User Interface Measurements – Device and pixel density independent measuring units, Layouts – Linear, Relative, Grid and Table Layouts etc. User Interface (UI) Components – Editable and non-editable TextViews, Buttons, Radio and Toggle Buttons, Checkboxes, Spinners, Dialog and pickers etc Event Handling – Handling clicks or changes of various UI components.Fragments – Creating fragments, Lifecycle of fragments, Fragment states, Adding fragments to Activity, adding, removing and replacing fragments with fragment transactions, interfacing between fragments and Activities, Multi-screen Activities.						6
3.	Unit-3 Intents and Broadcasts Intent – Using intents to launch Activities, Explicitly starting new Activity, Implicit Intents, Passing data to Intents, Getting results from Activities, Native Actions, using Intent to dial a number or to send SMS Broadcast Receivers – Using Intent filters to service implicit Intents, Resolving Intent filters, finding and using Intents received within an Activity Notifications – Creating and Displaying notifications, Displaying Toasts.						6
4.	Unit-4 Persistent Storage Files – Using application specific folders and files, creating files, reading data from files, listing contents of a directory Shared Preferences – Creating shared preferences, saving and retrieving data using Shared Preference						6
5.	Unit-5 Database Introduction to SQLite database, creating and opening a database, creating tables, inserting retrieving and deleting data, Registering Content Providers, Using content Providers (insert, delete, retrieve and update)						6
6.	Unit 6 Android services Introduction of android services and its lifecycle. Location Services,Types of Services, Best practices- Performance, Testing,Privacy, Security etc. Deployment of Application.						6

<b>Prior knowledge of</b> - None							
<b>Course Objectives:</b> This course aims at enabling students, 1. Understand the importance and procedure of project management. 2. Know the key components of project management including project integration, project scope management, project time and cost management. 3. Recognize issues in a realistic project scenario.							
<b>Course Outcomes:</b> After learning the course, the students will be able to 1. <b>Understand</b> the concept and importance of project management. 2. <b>Develop</b> an understanding of nuances of project management 3. <b>Plan</b> and <b>execute</b> business ideas in the form of a project 4. <b>Monitor</b> and <b>manage</b> risk in project management.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	<b>Introduction to Project Management:</b> Concepts and Characteristics of Project, Importance of Project Management, Types of Projects, Understanding the Phases in the Lifecycle of Projects and their Significance, Different types of Projects: Industrial, Telecommunication, Research and more, Project Selection Methods						6
2.	<b>Clarifying the Project Scope, Including Tasks and Costs:</b> - Forms of Project Organization, Defining the "Why" and "What", Organizational Influences, Project Cost and Time Estimation, Project Planning and Communications Management, Work Breakdown Structure (WBS), Capital Budgeting Techniques.						6
3.	<b>Planning and Execution of Project:</b> Developing a Mission, Vision, Goals, importance of adequate Project Planning, Network Scheduling: Critical Path Method, Project Evaluation; Review Technique – Planning and Scheduling of Activity Networks -Assumptions in PERT Modeling – Time-cost Trade-offs – Linear Programming and Network Flow Formulations – PERT/CPM, HRM issues in project management, Quality Circle, Failures of Project <b>Case Study:</b> Failure of Enron Project / Refineries in Maharashtra						6
4.	<b>Project Monitoring and Risk Management:</b> Building a Suitable Monitoring; Control System, Conflict Management, Risk Matrix Analysis, Strategies to Manage Risks, an Overview of Useful Techniques and Tools Used in Project Management						6
	<b>Total</b>						<b>24</b>
<b>Text Books:</b> 1. Joseph Heagney, Fundamentals of Project Management, American Management Association, 2012

<b>Prior knowledge of</b> a. Basic Financial Literacy							
<b>Course Objectives:</b> This course aims at enabling students 1. To develop an understanding of day-to-day working capital decisions; and also longer-term dealing, involving major capital investment decisions and raising long-term finance. 2. To improve students' understanding of the time value of money concept and the role of finance in the current competitive business scenario.							
<b>Course Outcomes:</b> After learning the course, the students will be able to 1. <b>Understand</b> the basics of financial management and its terms and concepts 2. <b>Understand</b> financial markets and the role of financial institutions 3. <b>Analyse</b> financial statements and read documents and books of accounts. 4. <b>Develop</b> knowledge of capital budgeting; its allocation, management and funding.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	<b>Introduction to Financial Management-</b> Concept of Business Finance, Goals & Objectives of the Firm, Modern Approaches to Financial Management, Financial Planning - Principles and Steps in Financial Planning.						6
2.	<b>Financial Markets, Institutions and instruments:</b> Introductions to Financial Markets – Nature – Functions, Financial Instruments, Commodity Markets, Sources of financing - Shares, Debentures, Term Loans, Lease & Hire, Purchase, Retained Earnings, Public Deposits, Bonds (Types, Features & Utility), Introduction; Bank Finance, Trade Credit & Bills Discounting, Interest Rates						6
3.	<b>Time Value of Money:</b> Cash Flow, Time Line, Stream of Cash Flow, Annuities, Perpetuities Need and Importance of Capital Budgeting, Different Techniques of Evaluating the Project on the Basis of Payback Period, NPV, IRR, ROI, PPP						6
4.	<b>Financial Statement Analysis:</b> Reading Financial Statements Purpose and Parties involved, Financial Statements, Balance Sheet, Profit and Loss Statement, Cash Flow Statement, Assets, Tools of Analysis of Financial Statements, Comparative Statements, Ratio analysis						6
	<b>Total</b>						<b>24</b>

<b>Course Objectives:</b> This course aims at enabling students, <div><div>1.</div><div>To understand the role and importance of entrepreneurship for economic development</div></div> <div><div>2.</div><div>To seek necessary knowledge and develop skills required for organizing and carrying out entrepreneurial activities.</div></div> <div><div>3.</div><div>To develop the ability to analyse and understand business situations in which entrepreneurs act.</div></div>							
<b>Course Outcomes:</b> After learning the course, the students will be able to <div><div>1.</div><div>Identify entrepreneurship as an opportunity</div></div> <div><div>2.</div><div>Identify the business opportunities that suit aspirant entrepreneurs</div></div> <div><div>4.</div><div>Use the support systems to zero down on the business ideas</div></div> <div><div>5.</div><div>Develop comprehensive business plans.</div></div>							
Detailed Syllabus:							
Unit	Description						Duration (H)
1.	<b>Concept and Scope:</b> Meaning, Challenges and Misconceptions Related to Entrepreneurship with Indian Context, McClelland’s Need Achievement Theory, Entrepreneurship as a Career, Traits of Successful Entrepreneur, Types of Entrepreneur (proprietary, partnership, collaboration etc), Entrepreneur v/s Intrapreneur, Factors Affecting Entrepreneurship, Types of Enterprises and their Features: Manufacturing, Service and Trading <b>Case Study:</b> Indian Entrepreneurs Pre and Post Covid World						6
2.	<b>Entrepreneurial Opportunities and Process Selection:</b> Concept of Business Opportunity, How to Generate Business Ideas? Identification of Ideal and Viable Business Opportunities, Challenges in the Selection of Business Opportunities, Business Opportunities Identification Process, Required Licenses, Approvals and Expertise, Business Value Chain, Different Sections of the Business Value Chain for Potential Opportunities, Understanding Product Costs and Operations Costs; Legal Aspects.						6
3.	<b>Finance and Support Systems:</b> Raising Capital, Venture Capital, Angel Investors, Seed Funding, Role of Government in Promoting Entrepreneurship in India, Start-up India, Atmanirbhar Bharat, Make in India, Assistance to an Entrepreneur, Industrial park, Special Economic Zone, MSME Act, MSME Policy in India, Financial Assistance to MSME, Various Government Schemes - PMEGP, CGTMSE, PMKVY, Mudra Loan, Incubation, Role of Incubation Centers, Support from Incubation Centers						6
4.	<b>Business Plan:</b> Business Plan, Contents of Business Plan: Executive Summary, Business Concept, Business Strategy, Management Summary, Marketing Plan, Operations Plan, Financial Plan, Presenting Business Plan, Procedure for setting up an Enterprise, Why Do Some Business Plans Fail?						6
	Total						24

--	2	--	2	--	--	--	--
<b>Prior knowledge of:</b> a. Fundamental of Thermal Engineering, Fluid Mechanics and Heat Transfer and Mathematics. b. Hands on experience on commercial design software like CAMD, CATIA, etc. is recommended.							
<b>Objectives:</b> 1. To create an awareness of CFD among students 2. Students should be able to model fluid / heat transfer problems and apply fundamental conservation principles 3. To prepare the students for further graduate studies involving CFD analysis and its applications 4. To prepare the students for career in industry in CAE using software tools.							
<b>Outcomes:</b> The students should be able to: 1. <b>Use</b> suitable modern tools to formulate the problem 2. <b>Create</b> high quality grids and interpret the correctness of numerical results with physics. 3. <b>Analyze</b> the model fluid flow and heat transfer problems and <b>apply</b> relevant boundary conditions. 4. <b>Apply</b> the various numerical techniques for approximate results. 5. <b>Evaluate</b> and <b>Solve</b> flow problems and heat transfer by analyzing the results obtained from computational method.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1	<b>Introduction to Computational fluid dynamics:</b> <ul style="list-style-type: none"><li>What is Computational Fluid Dynamics (CFD)? Significance of CFD in the industry. CFD analysis process: Preprocessing, Solver and Post processing.</li><li>Introduction to any suitable software tool for CFD analysis.</li><li>Introduction to Boundary conditions and Initial value conditions.</li><li>Brief overview of Navier-Stokes equation</li><li>Concept of Finite Difference Method (FDM) and Finite Volume Method (FVM)</li></ul>						4
2	<ul style="list-style-type: none"><li>Overview of the ANSYS software tool<ul style="list-style-type: none"><li>a) Introduction Ansys Workbench, Geometry, Meshing, Fluent solver, Problem Set up, Post-processing module.</li><li>b) Modeling: Turbulence modeling, Heat Transfer Modeling, Transient Flow Modeling</li></ul></li></ul>						4
3	<ul style="list-style-type: none"><li>Discretization: 1D, 2D and 3D element Meshing, Use of Symmetry, Mesh quality, Mesh independent test.</li></ul> <b>Case Study:</b> <ul style="list-style-type: none"><li>a) Internal flow: Flow through pipe, Forward facing step or Backward facing step</li><li>b) External flow: Flow over Circular Cylinder</li></ul>						4
4	Aerodynamic analysis of an 2-Dimensional Ahmed Body						4
5	Solving a 2-Dimensional Conjugate Heat Transfer Problem using suitable commercial software						4
6	Melting and Solidification behavior of phase change material (PCM) in single shell and tube heat exchanger using ANSYS FLUENT.						4
	<b>Total</b>						<b>24</b>
<b>Text Books:</b> 1. A. Sharma, Introduction to Computational Fluid Dynamics, Athena Academic and John Wiley & Sons, UK, 2017 2. J. D. Anderson, Computational Fluid Dynamics, McGraw Hill, 1995 3. T. J. Chung, Computational Fluid Dynamics, Cambridge University Press, 2010.							

<b>Program:</b>		<b>B. Tech. (All Branches)</b>			<b>Semester : VI</b>		
<b>Course :</b>		<b>Proficiency Development Training-II (MC-II)</b>			<b>Code : BHM5918</b>		
<b>Teaching Scheme</b>			<b>Evaluation Scheme</b>

3	-	-	-	-	-	-	-
<b>Course Objectives:</b> 1. This course aims at enabling the students 2. To enhance the logical reasoning skills of the students and improve the problem-solving abilities. 3. To improve the overall professional development of students.							
<b>Course Outcomes:</b> Students will be able to After learning the course, the students will be: 1. Having adaptive thinking and adaptability through various Quantitative ability concepts. 2. Having critical thinking and innovative skills 3. Having interest in lifelong learning & developing verbal competencies in the students.							
<b>Detailed Syllabus:</b>							
<b>Unit</b>	<b>Description</b>						<b>Duration (H)</b>
1.	<b>Modern Maths</b> Profit loss, Ratio & Proportion, LCM & HCF, Time speed and Distance, Average, Mean, mode, median, permutation & combination, Probability, Pipe & systems, Mixture validation, Allegations and Mixtures, Simple Interest and Compound Interest.						6
2.	<b>Algebra</b> Linear equations, Quadratic equations, Triplets. <b>Geometry</b> Triangles, Polygons (questions on Area Perimeter).						6
3.	<b>Mensuration</b> Cube cuboids cone cylinder sphere (questions on volume surface Area) <b>Trigonometry</b> <b>Number System</b> <b>Statistics.</b>						6
4.	<b>Logical Reasoning</b> Clocks and Calendar, Direction sense, Family tree, Syllogism, Seating arrangement, Team formation, Coding and Decoding, Number Series and Letter Series, Ranking and Arrangements, Game-Based Aptitude.						6
5.	<b>Data Interpretation</b> Data charts, Data tables, Bar, Pie, Line graphs, Venn diagram.						6
6.	<b>Verbal Ability &amp; Reading Comprehension</b> Subject-Verb Agreement, Articles and Other Determiners, Prepositions, Tenses, Parts of Speech, Active and Passive Voice, Direct and Indirect Speech, Error Spotting and Sentence Correction, Sentence Completion, Synonyms and Antonyms, Reading Comprehension, Para Jumbles.						6
	<b>Total</b>						<b>36</b>
<b>Reference Books:</b> 1. Arun Sharma, Quantitative Aptitude, 2016, 7 <sup>th</sup> Edition, McGraw Hill Education Pvt. Ltd. 2. ## **Vision and Mission of Mechanical Department**

### **Department Vision**

To recognize for an academic excellence through skill development, innovation fine blend with quality work culture

### **Department Mission**

To impart quality education, innovation culture, necessary skill sets and social commitment among the students to build professional carrier by establishing state-of-the-art Mechanical Engineering infrastructure and conducive learning environment.
