Pimpri Chinchwad Education Trust's

PIMPRI CHINCHWAD COLLEGE OF ENGINEERING

SECTOR NO. 26, PRADHIKARAN, NIGDI, PUNE 411044

An Autonomous Institute Approved by AICTE and Affiliated to SPPU, Pune

DEPARTMENT OF MECHANICAL ENGINEERING

Curriculum Structure and Syllabus

of

M. Tech. Mechanical Design Engineering

(Approved by BoS Mechanical Engineering)

(Course 2020)

Effective from Academic Year 2020-21

Institute Vision

To Serve the Society, Industry and all the Stakeholders through the Value-Added Quality Education.

Institute Mission

To serve the needs of society at large by establishing State-of-the-Art Engineering, Management and Research Institute and impart attitude, knowledge and skills with quality education to develop individuals and teams with ability to think and analyze right values and self-reliance.

Quality Policy

We at PCCOE are committed to impart Value Added Quality Education to satisfy applicable requirements, needs and expectations of the Students and Stakeholders. We shall strive for excellence, academic professional competence and social commitment in fine blend with innovation and research. We shall achieve this by establishing and strengthening state-ofthe-art Engineering and Management Institute through continual improvement in effective implementation of Quality Management System.

Program:	M. T	ech. Mechanical	(Design Enginee	ering)	Semester :	Semester : I			
Course: Research Methodology and IPR					Code: M	Code: MMD1401			
	Teach	ing Scheme/Wee	ek	Evaluation Scheme					
Lecture		Credit	Hours	IE1	IE2	ЕТЕ	Total		
3		3	3	20	30	50	100		

Pre-requisite: Project and seminars in undergraduate

Objectives:

- 1. To select and define appropriate research problem and parameters with appropriate methodology.
- 2. To understand statistical techniques for the specific perspective data in an appropriate manner.
- 3. To make predictions and decisions for the data set using open-source software.
- 4. To understand the mathematical modeling and its predicting capability.
- 5. To learn the various steps in research writing and publication process
- **6.** To introduce fundamental aspects of Intellectual property Rights

Outcomes:

After learning the course, the students should be able to:

- 1. Define a research problem and use appropriate research methodology
- Examine data using different hypothesis tests and make conclusions about acceptance or rejection of sample data.
- 3. Analyze numerical data, using standard procedures of probability theory to predict the performance.
- 4. Develop a mathematical model and analyze the prediction capabilities
- 5. Write a research paper and research proposal.
- 6. Write a concept note and prepare to file an IP.

	ed Syllabus:	
Unit	Description	Duration (Hrs)
1.	Research Problem and Research Design Objectives, Motivation, Types of Research, Research Approaches, Significance of Research,	,
	Research Methods versus Methodology, Criteria of Good Research Definition and Feasibility study of research problem, Sources of research problem, Meaning of Hypothesis, Characteristics of Hypothesis, Errors in selecting a research problem, Concept & need of research design	6
2.	Applied Statistics	
	Measures of Variability: Standard Deviation, variance, Quartiles, Interquartile Range Inferential Statistics: Statistical Significance (p values), Pearson's r test, t- test, Chi square test, ANOVA (Analysis of variance)	6
3.	Probability Sampling, Types of Sampling, Probability Distribution: Binomial Distribution, Poisson Distribution, Normal Distribution, Case Study: Develop a model for Prediction and Decision Making for the data set using open-source software	6
4.	Mathematical Modeling and prediction of performance	
	Types of Modeling, Types of solutions to mathematical models, Steps in Setting up a computer model to predict performance of experimental system, Validation of results, Multiscale modeling and verifying performance of process system, Nonlinear analysis of system and asymptotic analysis, Sensitivity analysis.	6
5.	Research Report writing and Publication	
	Research Report: Dissemination of research findings, outline and structure of research report, different steps and precautions while writing research report, methods and significance of referencing.	6
	Publishing Research work: Selection of suitable journal for publishing research work, Open access Vs Subscription Journals, Identifying indexing of selected journals, Impact factor of the journal, structure of research paper, Check for plagiarism of the article, Research paper submission and review process.	U

6	Intellectual property Rights	
	Definition of IPR, Classification of IP, Patentable and non-patentable inventions, statutory exceptions, Persons entitled to apply for patents.	6
	Prior Art Search, Patentability Criteria, Patent Filing Procedure, Forms and Fees, Case Study of Patent, Copyright.	
	Total	36

Textbooks:

- 1. C. R. Kothari, Research Methodology: Methods and Techniques, New Age International, 2nd Edition, 1985
- 2. Ranjit Kumar, Research Methodology: A Step-by-Step Guide for Beginners, 2nd Edition., 2010.
- 3. Ramakrishna B and Anil Kumar H S., Fundamentals of IPR, Notion Press, 2016
- 4. Virendra Kumar Ahuja, IPR in India, LexisNexis Butterworths Wadhwa Nagpur, 2017

Reference Books:

- Stuart Melville and Wayne Goddard, Research methodology: An Introduction for Science & Engineering students
- 2. S.D. Sharma, Operational Research, Kadar Nath Ram Nath & Co.
- 3. Wayne Goddard and Stuart Melville, Research Methodology: An Introduction, Juta and Company Ltd, 2004

IE Activities:

- 1. Write a review paper based on detailed literature survey and cheque for plagiarism.
- 2. Write a research proposal on your domain specific research problem.
- 3. Write a concept note and prepare to file an IP

"Knowledge Brings Freedom"

Intimism Eveellence

Program: M. Tech. Mechanical (Design Engineering) S				Semester :	Semester : I		
Course : Stress Analysis					Code: M	IMD1402	
Teaching Scheme					Evaluati	on Scheme	
Lecture		Credit	Hours	IE1	IE2	ЕТЕ	Total
3		3	3	20	30	50	100

Pre-requisite: Strength of Materials, Machine Design

Objectives:

- 1. To understand and analyse stress and strain at a point in deformable solids.
- 2. To understand different approaches to obtain stresses, strains and deformations induced in the solids.
- 3. To solve thin section members for bending and torsion.
- **4.** To evaluate stresses, deflection due to line or point contact in solids.

Outcomes:

After learning the course, the students should be able to:

- 1. Formulate and Analyse Stress Field equations such as equilibrium equations, compatibility and constitutive relationship
- 2. Formulate and Analyse Stresses in pressurised cylinder and rotating disc.
- 3. Apply Energy methods to evaluate stresses and strains.
- 4. Analyse and Determine the Torsion and Bending of thin wall section
- 5. Analyse and estimate contact stresses in conforming and non-conforming shapes.
- 6. Understand experimental methods for stress evaluation estimate the same using resistance strain gauging technique and Photoelasticity technique.

Unit	Description	Duration, h
1.	Theory of Elasticity Analysis of Stresses and Analysis of Strain. Stress Tensor, Compatibility equations in two and three dimensions, Airy's stress functions in rectangular and Polar coordinate systems,	6
2.	Pressurized Cylinders and Rotating Disks, Governing equations, stress in thick walled cylinder under internal and external pressure, shrink fit compound cylinders, stresses in rotating flat solid disk, flat disk with central hole, disk of uniform strength,	6
3.	Energy Methods Energy method for analysis of stress, strain and deflection Theorem's - theorem of virtual work, theorem of least work, Castiglioni's theorem,	4
4.	Thin wall Members: Torsion of thin walled members of open cross section. Torsion of Multiply Connected Thin-Walled Sections Concept of shear centre in symmetrical and unsymmetrical bending, Shear centre for thin wall beam cross section, open section with one axis of symmetry.	6
5.	Contact stresses Geometry of contact surfaces, method of computing contact stresses and deflection of bodies in point contact, Stress for two bodies inline contact with load normal to contact area and load normal and tangent to contact area, For cases like - gear contacts, contacts between cam and follower, ball bearing contacts.	7
6.	Experimental stress analysis Dimensional analysis, analysis techniques, strain gauges, types of strain gauges, materials, configuration, instrumentation, characteristics of strain gauge measurement, theory of photoelasticity, elements of polariscope, simple and circular polariscope, fringes in dark and white field, isoclinic and isochromatic fringe patterns, evaluation of stresses from these fringe patterns.	7
	Total	36

Text Books:

- 1. Theory of Elasticity-Timoshenko and Goodier, McGrawHill
- 2. Advanced Strength and Applied Stress Analysis-Richard G. Budynas, McGrawHill
- 3. Advanced Mechanics of Materials–Boresi, Schmidt, Sidebottom, Willey

- 1. Advanced Mechanics of Materials-Cook and Young, Prentice Hall
- 2. Advanced Mechanics of Solids, L S Shrinath, Tata McGrawHill
- 3. Advanced Strength of Materials, Vol. 1, 2-Timoshenko, CBS
- 4. Advanced Strength of Materials-Den Hartog
- 5. Experimental Stress Analysis–Dally & Riley
- 6. Mechanics of Materials E J Hern, Buttorwoth
- 7. Strength of Materials, Singer Andrue Pytel, Pearson

Program:	ogram: M. Tech. Mechanical (Design Engineering)				Semester :	: I	
Course:	Course: Finite Element Method				Code: M	MD1403	
Teaching Scheme					Evaluati	on Scheme	
Lecture		Credit	Hours	IE1	IE2	ЕТЕ	Total
3		3	3	20	30	50	100

Pre-requisite:

Engineering Mathematics, Machine Design, Strength of Material

Objectives:

- To understand the philosophy and general procedure of Finite Element Method as applied to solid mechanics and thermal analysis problems.
- 2. To familiarize students with the displacement-based finite element method for displacement and stress analysis and to introduce related analytical and computer tools.
- 3. It provides a bridge between hand calculations based on mechanics of materials and machine design and numerical solutions for more complex geometries and loading states.
- 4. To study approximate nature of the finite element method and convergence of results are examined.
- 5. It provides some experience with a commercial FEM code and some practical modeling exercises

Outcomes:

After learning the course, the students should be able to:

- 1. Student will be able to apply different variation methods for deriving the stiffness matrices of bar and beam element
- 2. Student will Understand the Iso-parametric Elements and Formulation of Plane Elasticity Problems
- 3. Student will be able to create and solve the governing equations for plates using Kirchoff theory and Mindlin plate element theory
- 4. Student will be able to Evaluate non linear problems related to geometry, material and contact.
- 5. Student will be able to formulate and solve the dynamic problems related to eigen value and eigen vectors

Detaile	d Syllabus:	
Unit	Description	Duration, h
1	One dimensional problems Finite element method, brief history, basic steps, advantages and disadvantages, weak formulation, variational methods of approximation — Rayleigh-Ritz methods, Galerkin method of Weighted Residuals. Variational formulation of 1D bar and beam elements (Euler Bernoulli and Timoshenko beam) — governing equation, domain discretization, elemental equations, assembly and element connectivity, application of boundary condition, solution of equations, post-processing of the results. Automatic mesh generation techniques, Mesh quality checks, h & p refinements, Node Numbering scheme	6
2	Two Dimensional Isoperimetric Formulation Introduction, types of 2D elements (CST, LST, QST, Isoparametric), shape functions — linear & quadratic, displacement function — criteria for the choice of the displacement function, polynomial displacement functions, displacement function in terms of nodal parameters, strain-nodal parameter relationship, stress-strain relationship, element stiffness matrix, convergence of isoparametric elements, rate of convergence, plane elasticity problems — plane stress, plane stain and axisymmetric problems	6
3	Isoparametric Formulation and Numerical Integration Isoparametric formulation of 1D and 2D Element, Subparametric, Superparametric and Isoparametric Element Numerical Integration – Trapezoidal rule, Simpson's 1/3 rule, Newton-Cotes Formula, Gauss Quadrature formula, Gauss Quadrature in two and three dimensions, reduced and selective integration	6
4	Plate Theories Thin and thick plates – Kirchhoff theory, Mindlin plate element, triangular and rectangular, conforming and nonconforming elements, degenerated shell elements, shear locking and hour glass phenomenon	6

5	Non-Linear Analysis Introduction to non-linear analysis, formulation for geometrical, material and contact nonlinear problems, Nonlinear equation solving procedure - direct iteration, Newton-Raphson method, modified Newton-Raphson method, incremental techniques	6
6	Dynamic Problems – Eigen value and Time Dependent Problems Formulation of dynamic problems, consistent and lumped mass matrices Solution of eigenvalue problems – transformation methods, Jacobi method, Vector Iteration methods, subspace iteration method [Theoretical Treatment] Forced vibration – steady state and transient vibration analysis, modeling of damping, the mode superposition scheme, direct integration methods – implicit and explicit numerical integration	6
	Total	36

Teaching Scheme				Evalı	uation Scheme	
Practical	Hours	Credit	TW	PR	OR	Total
2	2	1	50		50	100

Guidelines:

- 1. Total experiments to be conducted are Three from Part A and Three from Part B
- 2. Total: 6 experiments 12 hours

Pre-requisite: Engineering Design, Strength of materials

Objectives:

This course is to provide students the tools required for Simulate, correlate and validate theoretical concepts and understand the basic principles.

Outcomes:

After learning the course the students should be able to:

- 1. Simulate the problem and correlate with theoretical concepts
- 2. Understand the impact of assumptions on the simulated results
- 3. Obtain stresses and strains using experimental methods of stress analysis
- 4. Apply strain gauges at appropriate locations, collect data, analyse, interpret results.

Detailed Syllabus:

Part A: Stress Analysis (ANY Three)					
Expt.	Description	Duration			
1.	Analytical and Numerical Evaluation of Stresses for plate with hole and correlate with theoretical model developed for solution	2			
2.	Contact stress analysis using FEM software and correlate with theoretical model developed for solution.	2			
3.	Shear Centre location for thin section beam.(Box, L-section, C-section)	2			
4.	Stain gauge mounting and Measurement of strain in cantilever beam using strain gauges	2			
5.	Calibration of Photoelastic materials	2			
6.	Evaluation of Stresses using Polariscope	2			
	Total (Any Three)	6			

Pre-requisite: Engineering Mathematics Machine Design, Strength of Material

Objectives:

- 1. To impart the philosophy and general procedure of Finite Element Method simulations as applied to solid mechanics and thermal analysis problems.
- 2. To describe and interpret Numerical solutions for more complex geometries and loading states.
- 3. To study approximate nature of the finite element method and convergence of results are examined.
- 4. Adequately describes a physical event and establishing or validating a relationship between obtained results and underlying physical principles.

Outcomes:

After learning the course the students should be able to:

- 1. Apply General procedure and philosophy of finite element method to simulate complex engineering problems
- 2. Evaluate linear and non linear problems related to geometry, material and contact.
- 3. Understand and apply elements, mess sensitivity analysis and convergence study to real life problems.

	Part B: Finite Element Method (ANY Three)					
Expt.	Description	Duration				
1.	Stress analysis of 1D bar using linear and quadratic elements. Show the variation of stress and strain within the element for linear and quadratic bar element (Convergence Study)	2				
2.	Modal analysis and stress analysis for 1-D beam (simply supported or cantilever beams) (Convergence Study)	2				
3.	Static stress concentration factor calculation for a plate with center hole subjected to axial loading in tension using FEA software (Convergence Study)	2				
4.	Stress, Strain and deflection analysis of any machine component consisting of 3-D elements using FEA software. (Convergence Study)	2				
	Total (Any Three)	6				

Text Books:

- 1. Advanced Strength and Applied Stress Analysis-Richard G. Budynas, McGrawHill
- 2. Seshu P., "Text book of Finite Element Analysis", PHI Learning Private Ltd., New Delhi, 2010.

Program	M. Tech. Mechanical (Design Engineering)				Semester: 1	[
Course:	LAB Name : Sk	till Development l	Lab-I		Code: MMD140)5
	Teaching Scheme Evaluation Scheme					
Practical	Hours	Credit	TW	PR	OR	Total
2	2	1	50			50

Pre-requisite:

Objectives:

To provide students with a practical knowledge of the finite element methods and the skills required to analyze engineering problems with commercially available FEA software's

Outcomes

After learning the course, the students with the aid of commercial FEA software's should be able to perform:

- 1. The static and dynamic linear response for an engineering component
- 2. Composite and fatigue analysis for an engineering component
- 3. Nonlinear dynamic analysis for an engineering component
- 4. The shape and topological optimization for an engineering component

Detailed Syllabus:

List of Experiments/ Assignments:

Each student shall complete any Four of the following assignments, with assignment 1 compulsory.

- 1. Determine static and dynamic linear response of a 3-dimensional engineering component subjected to various combination of loads
- 2. Investigate effect of various parameters (no. of lay-ups and fiber orientation) on laminated composite structures
- 3. Perform fatigue analysis using stress and strain life approach of an engineering component
- 4. Determine frequency/Transient/Random response for members subjected to forced vibration
- 5. Perform nonlinear dynamic analysis of engineering components subjected to material nonlinearity/Geometric nonlinearity/Contact Nonlinearity. Solve for Impact/Crash/Shock problems
- 6. Perform topological/Shape optimization

Students can perform above assignments using any of the software mentioned below: Ansys, ABAQUS, 3D Experience, Nastran, Hyper mesh

Text Books:

- 1. The Finite Element Method and Applications in Engineering Using ANSYS® by Madenci, Erdogan, Guven, Ibrahim (Springer)
- 2. Seshu P., "Text book of Finite Element Analysis", PHI Learning Private Ltd., New Delhi, 2010.
- 3. Mukhopadhyay M and Sheikh A. H., "Matrix and Finite Element Analyses of Structures", Ane Books Pyt Ltd 2009
- 4. Nitin S. Gokhale, "Practical Finite Element Analysis", Finite to infinite, Pune
- 5. Ever J. Barbero," Finite element analysis of composite materials using Abaqus", CRC Press taylor Francis group.

Program:	Program: M. Tech. Mechanical (Design Engineering) S				Semester :	Ι	
Course: Advanced Machine Design (Elective)					Code: M	MD1501A	
Teaching Scheme				Evaluati	on Scheme		
Lecture		Credit	Hours	IE1	IE2	ETE	Total
3		3	3	20	30	50	100

Pre-requisite:

Advanced Stress Analysis, Engineering Design, Manufacturing Processes

Objectives:

- 1. To make aware the students about industrial design practices.
- 2. To enable the students to identify, define and solve the real life engineering problems.

Outcomes: After learning the course, the students should be able to:

- Students will realize that creativity, manufacturability, assembly, maintainability, emotions, reliability are also important aspects of design other than finding dimensions and stresses in the highly competitive, dynamic and customer centered market.
- 2. Students will demonstrate the ability to identify needs of the customer and convert them into technical specifications of a product.
- 3. Students will be able to generate different ideas after identifying the need and determining the specifications and constraints of a product for a particular purpose.
- 4. Students will understand the principals used while designing for manufacture, assembly, emotions and
- 5. Students will know various methods of rapid prototyping the products to test and modify the designs.
- 6. Students will be able to design the components considering strength based reliability

Detailed Syllabus:

Unit	Description	Duration, h
1.	Development processes and organizations, Product Planning Introduction to engineering design, Product development process, Product and process cycles, organization for design and product development, technological innovation	6
2.	Need Identification and problem definition, product specification, concept generation and selection, evaluation, creativity methods, Concept testing Identifying customer needs, requirements, establishing the engineering characteristics, quality function deployment, product design specification	6
3.	Design for manufacture, assembly, maintenance, casting, forging	6
4.	Design for Reliability, strength based reliability, parallel and series systems, robust design	6
5.	Design of dis-assembly, Design for reuse, Design for Environment and Design for cost and Design for Quality	6
6.	Industrial design: Design for Emotion and experience, Introduction to retrofit and Eco design, Human behavior in design	6
	Total	36

Program:	Program: M. Tech. Mechanical (Design Engineering)				Semester:	Semester: I		
Course	Mechanical Behaviour of Materials (Elective)				Code : MN	Code: MMD1501B		
Teaching Scheme Evaluation Scheme								
Lecture		Credit	Hours	IE1	IE2	ЕТЕ	Total	
3		3	3	20	30	50	100	

Pre-requisite:

Material science, Mechanics of materials

Objectives:

- 1 To explore the modern materials with their applications.
- 2 To provide an ability to identify the response of materials under complex loading.
- 3 To make students able to interpret the behaviour of plastic & Visco-elastic material

Outcomes: After learning the course, the students will be able to:

- 1. To apply the mechanics of modern materials in recent engineering applications.
- 2. To solve the basics problems of finding stresses and strains at a point under complex loading conditions
- 3. To study material behavior under forms of loading other than uniaxial tension
- 4. To identify and investigate engineering problems involving plastic deformation during strain hardening.
- 5. To realize the plastic and elastic- plastic behaviour of materials under different loading conditions
- 6. To formulate the mathematical modelling of Visco-Elastic materials and apply to engineering materials for behavioural study

	Detai <mark>led Syll</mark> abus						
Unit	Description	Duration, h					
1.	Modern Materials in Design Engineering Dual phase alloy, HSLA, lightweight non-ferrous alloy and their full range stress strain behaviour subjected quasi-static and high strain rate loading, Composites and its orthotropic properties, Plastics, Smart materials, Nano-materials – types, applications and its properties						
2.	Response of metals and alloys under applied loading Stress, strain transformations, Mohr's circle, Isotropic elasticity, Anisotropic thermal expansion, Octahedral shear stress, Yield criteria, Yield surface, Yield curve.	06					
3.	Tensile testing Uni-axial and biaxial tension test, Full range stress-strain curves, True stress-strain curve, Bridgman correction, Temperature rise, Bauschinger effect, Combined bending and torsion test, Three points bend test, Elastic recovery	06					
4.	Stress- Strain relations for work hardening materials Experimental studies of plastic deformations under simple and complex loading, Strain hardening, Power law approximations, Isotropic, Kinematic and combined hardening models, Theory of plastic flow, Strain-rate and temperature dependence of flow stress	06					
5.	Plastic and Elastic-Plastic Behaviour Deformation theory of plasticity, Thermo-plasticity, Behaviour of metals with initial deformations. Equations of Elastic-Plastic Equilibrium, Residual stresses and strains, Plastic-rigid body, Elastic-Plastic bending and torsion, Elastic-Plastic bodies under variable loading	06					
6.	Elasto-Visco-Plasticity Visco-elasticity, Rheological models, Maxwell model, Voigt model, Voigt—Maxwell model, Natural decay, Dependence of damping and elastic modulus on frequency, Thermo-Elastic effect, Low temperature and high temperature Visco-plastic deformation models, Rubber elasticity, Damping, yielding, effect of strain rate, Crazing.	06					
	Total	36

Pre-requisite:

Theory of Machines

Objectives:

- 1. To study the kinematic analysis of simple and complex mechanisms
- 2. To apply kinematic theories to synthesize mechanisms

Outcomes:

After learning the course, the students should be able to:

- 1. Analyze Simple and Complex Mechanisms
- 2. **Identify** the center of curvature and design mechanism with dwell
- 3. Synthesize mechanisms using graphical methods
- 4. **Apply** kinematic theories to synthesis of mechanism

	d Syllabus	
Unit	Description	Duration, h
1.	Kinematic analysis of simple mechanisms Kinematic analysis of mechanisms, degree of freedom, Graphical method of velocity and acceleration analysis of simple mechanism.	4
2.	Kinematics analysis of complex mechanisms Types of complex mechanisms, velocity-acceleration analysis of complex mechanisms by the Normal Acceleration method and Auxiliary Point Method.	6
3.	Curvature theory Fixed and moving centrodes, Center of curvature, cubic of stationary curvature, Inflection circle, Balls point.	6
4.	Synthesis of planar mechanisms - Graphical I Types, number and dimensional synthesis, Accuracy (precision) points, Chebychev spacing, types of errors, branch and order defects. Function generation and rigid body guidance with two and three accuracy points using Relative pole method & Inversion method.	8
5.	Synthesis of planar mechanisms - Graphical II Synthesis of four bar mechanism for path generation and rigid body guidance tasks (two, three and four position) for with and without timing.	6
6.	Synthesis of Planar Mechanisms - Analytical Freudenstein equation for synthesis of four bar mechanism. Four position synthesis of slider crank mechanism, Complex numbers method of synthesis, Synthesis using dyad method (two and three position)	6

Pre-requisite:

1. Differential and Integral Calculus

Objectives:

After completion of the course, students will have adequate background, conceptual clarity and knowledge of mathematical principles related to:

- 1. Eigen Value and Eigen Vectors to solve Mass spring system.
- 2. Transforms such as Laplace and Fourier transform and applications
- 3. Special Functions and Numerical methods to solve PDE.
- **4.** Calculus of variation to optimize functional problems.

Outcomes:

After learning the course, the students should be able to:

- 1. Apply the concept of Eigen Value and Eigen Vector to solve mass spring system.
- 3. Solve problems related to Laplace transform and applications to Design Engineering.
- 4. Apply the knowledge of series solution in special functions
- 5. Find numerical solution of PDE.
- 6. Analyse the functional optimization using different methodology.

	aryse the functional optimization using different methodology.	
Detailed Syl	llabus:	
Unit Des	scription	Duration, h
1. Bas	sic concept of Laplace Transforms, Laplace transforms and its inverse.	6
	place transform of special functions: Unit step, Unit impulse, Periodic and Error. plications to Differential Equations.	6
	ass spring systems of multi degree freedom, Matrix formulation for differential nations in vibration theory, Normal mode solution, Numerical computation of Eigen ue.	6
	ries Solution of differential equations, Bessel's and Legendre's differential nations. Least square solution	6
Proi bou	lculus of Variation Introduction, Functional, Euler's equation, Isoperimetric oblem, Functional involving higher order derivative, Approximate solution of undary value problem, Rayleigh –Ritz method, Galerkin's method, Lagrange's neipal.	6
sche in t	merical Analysis Finite difference analysis, Explicit and Implicit finite difference neme, Stability of finite difference method, Applications of finite difference analysis boundary value problems, one dimensional diffusion equation, Wave equation, place equation.	6

Pre-requisite:

Advanced Stress Analysis, Manufacturing Processes

Objectives:

- 1. To make aware the students about various composites materials and their applications.
- 2. To enable the students to analyze, design the composite structures.

Outcomes: After learning the course, the students should be able to:

- 1. Exhibit the ability to choose appropriate type of composite for the given application.
- 2. Understand and apply the macro-mechanics of the composite lamina.
- 3. Choose appropriate theory of failure for the design of composite lamina.
- 4. Analyze the composite laminate for the stresses and stiffness.
- 5. Design the simple composite structures

Detailed S	Svllabus:
-------------------	-----------

Unit Description	Duration, h
1. Introduction to Composite Materials	
Introduction ,Classification, Polymer Matrix Composites, Metal Matrix Composites ,	4
Ceramic Matrix Composites, Carbon-Carbon Composites, Recycling Fiber-Reinforced	4
Composites, Mechanics Terminology.	
2. Macro-mechanical Analysis of a Lamina	
Introduction, Review of Definitions, Stress, Strain, Elastic Moduli, Strain Energy,	
Hooke's Law for Different Types of Materials, Anisotropic Material, Monoclinic Material,	
Orthotropic Material (Orthogonally Anisotropic)/Specially Orthotropic , Transversely	6
Isotropic Material, Isotropic Material, Relationship of Compliance and Stiffness Matrix to	
Engineering Elastic Constants of a Lamina, Engineering Constants of an Angle Lamina,	
Invariant Form of Stiffness and Compliance Matrices for an Angle Lamina.	
3. Strength Failure Theories of an Angle Lamina:	
Maximum Stress Failure Theory, Strength Ratio, Failure Envelopes, Maximum Strain	
Failure Theory, Tsai-Hill Failure Theory, Tsai-Wu Failure Theory, Comparison of	4
Experimental Results with Failure Theories, Hygrothermal Stresses and Strains in a	4
Lamina, Hygrothermal Stress-Strain Relationships for a Unidirectional Lamina,	
Hygrothermal Stress-Strain Relationships for an Angle Lamina.	
4. Micromechanical Analysis of a Lamina	
Introduction, Volume and Mass Fractions, Density, and Void Content, Volume Fractions,	
Mass Fractions, Density, Void Content, Evaluation of the Four Elastic Moduli, I Young's	8
Modulus, Poisson's Ratio, In-Plane Shear Modulus, Elasticity, Ultimate, Coefficients of	
Thermal Expansion Coefficients of Moisture Expansion.	
5. Macro-mechanical Analysis of Laminates	
Introduction, Laminate Code, Stress-Strain Relations for a Laminate, One-Dimensional	
Isotropic Beam Stress-Strain Relation, Strain-Displacement Equations, Strain and Stress in	6
a Laminate, Force and Moment Resultants Related to Mid-plane Strains and Curvatures,	U
In-Plane and Flexural Modulus of a Laminate, In-Plane Engineering Constants of a	
Laminate, Flexural Engineering Constants of a Laminate,	
6. Failure, Analysis, and Design of Laminates	
Introduction, Special Cases of Laminates, Symmetric Laminates, Cross-Ply Laminates,	
Angle Ply Laminates, Anti-symmetric Laminates, Balanced Laminate, Quasi-Isotropic	8
Laminates, Failure Criterion for a Laminate, Design of a Laminated Composite, Other	0

3		3	3	20	30	50	100	

Pre-requisite:

Fluid Mechanics, Engineering Metallurgy, Strength of Materials

Objectives:

- To provide necessary concepts, knowledge and skills in Engineering Tribology with design aspect
- To impart friction, wear and lubrication theory and their appropriate use in design and maintenance of machine components
- To provide hands on training with design of bearing, friction, wear test rig for laboratory purpose 3.

Outcomes:

After learning the course, the students will be able to:

- 1. apply theories of friction and wear to various practical situations by analyzing the physics of the process.
- 2. select materials and lubricants to suggest a tribological solution to a particular situation.
- 3. design a hydrodynamic bearing and measure the performance parameters using various bearing charts.
- 4. analyze the behavior of bearing in different lubrication regimes
- 5. determine the load carrying capacity in air lubricated bearing
- 6. To understand the tribological aspects in different applications and understand the solution to avoid wear and friction.

Unit	Description	Duration h
1.	Friction and wear Friction control and wear prevention, Boundary lubrication, Tribological properties of bearing materials and lubricants, Theories of friction and wear, Instabilities and stick-slip motion	7
2.	Lubrication of bearings Mechanics of fluid flow, Reynold's equation and its limitations, Idealized bearings, Infinitely long plane pivoted and fixed show sliders, Infinitely long and infinitely short (narrow) journal bearings, Lightly loaded infinitely long journal bearing (Petroff's solution), Finite bearings - hydrostatic, hydrodynamic and thrust oil bearings, Heat in bearings	7
3.	Hydrostatic squeeze film Circular and rectangular flat plates, variable and alternating loads, piston pin lubrications, application to journal bearings	6
4.	Elasto-hydrodynamic lubrication Pressure-viscosity term in Reynold's equation, hertz theory, Ertel-Grubin equation, lubrication of spheres	6
5.	Air lubricated bearings Tilting pad bearings, hydrostatic, hydrodynamic and thrust bearings with air lubrication	4
6.	Tribological aspects of Rolling motion Mechanics of tire-road interaction, road grip and rolling resistance, tribological aspects of wheel on rail contact, tribological aspects of metal rolling, drawing and extrusion	6
	Total	36

Pre-requisite:

- 1. Theory of Machine and Mechanism
- 2. Automobile Engineering,
- 3. Mechanical Vibration

Objectives:

- 1.To acquaint with vehicle design parameters & vehicle dynamic behavior
- 2. To develop an ability to evaluate the performance of vehicle
- 3. To make aware the students about the road dynamics of vehicle

Outcomes: After learning the course, the students will be able:

- 1. To investigate ISO and SAE vehicle coordinate system
- 2. To examine vehicle Tire model forces and torques
- 3. To interpret Vibrational behavior of vehicle in terms of human response
- 4. To analyze the road holding and directional stability of two axel vehicles at different steering inputs.
- 5. To develop physical and mathematical models to predict the dynamic response of vehicles
- 6. To analyze and calculate the ride characteristic of quarter car model of an automobile with different road excitations.

Unit	Description	Duration, h
1	Basics of Vehicle Dynamics Tyre mechanics, Vehicle tyre model, ISO and SAE vehicle coordinate system, Basic information of Electric, Hybrid and Autonomous ground vehicle, Different modeling software used for vehicle dynamics study, Different type of safety norms and Bharat stage emission standards	6
2	Performance characteristics of road vehicles Equation of motion and maximum tractive effort, Aerodynamic forces and moments, Prediction of vehicle performance, acceleration time and distance, gradeability, Introduction of Static Vehicle Characteristics and Suspension Parameters Measurement Machine	6
3	Braking Characteristics Braking characteristics of a two-axle vehicle, Braking efficiency and stopping distance, Braking characteristics of a Tractor-Semitrailer, Antilock brake systems, Traction control systems, Straight line braking event and output characteristics	6
4.	Handling characteristics of vehicle Steady-state handling characteristics of a two-axle vehicle, Steady-state response to steering input, Testing of handling characteristics, Transient response characteristics, Directional stability	6
5.	Vehicle ride characteristics Human response to vibration, Vehicle ride models - two-degree-of-freedom vehicle model for sprung and un-sprung mass, Numerical methods for determining the response of a quarter-car model to irregular surface profile excitation, Two-degree-of-freedom vehicle model for pitch and bounce, Active and semi-active suspension,	6
6.	Road and Suspension modeling Road – modeling aspects, deterministic profile, random profile, auto-correlation function, relation between input and output, effect of wheelbase, K&C characterizes and different type of roads and tires, Different Vehicle Types (Passenger Car, LCV, HCV, and Agricultural)	6
	Total	36

Pre-requisite:

Theory of Machines, Mechatronics, Basics of Electrical and Electronics Engineering

Objectives:

- 1. To get acquainted with basic components of robotic systems.
- 2. To understand grippers, sensors and actuators.
- 3. To understand statistics & kinematics of robots
- 4. To understand dynamics of robot.

Outcomes:

After learning the course, the students should be able to:

- 1. Identify different type of robot configuration and perform general transformations.
- 2. Apply DH parameters to a robot configuration thus determine the kinematic parameters.
- 3. Determine velocities and static forces in the manipulator.
- 4. Perform dynamic analysis of the manipulator.
- 5. Plan suitable trajectory to the designed robot
- 6. Select necessary actuators, sensors, control for satisfactory performance of the robot.

Detailed Syllabus

Unit	Description	Duration, h
1.	Introduction Structure, classification and applications, robot anatomy, dexterity and compliance of robot. Positions, orientations and frames of a rigid body, homogeneous transformations.	6
2.	Manipulator kinematics Representation of joints and link using Denavit-Hartenberg parameters, direct and inverse kinematics of robots, Frames with standard names.	6
3.	Velocities and static forces Linear and angular velocity of links, velocity propagation, manipulator Jacobians, Singularity analysis, Static forces in manipulators	6
4.	Dynamics of robots Mass and inertia of links, Acceleration of links, Lagrangian formulation for dynamics, Newton-Euler dynamic formulation, Dynamic Simulation.	6
5.	Trajectory generation Considerations in path description, Joint space schemes, Cartesian space schemes, Geometric problems with paths.	6
6.	Actuators, Sensors and Grippers Mechanical, Hydraulic and Pneumatic actuators, internal and external state sensors used for robots, types of grippers.	6

Pre-requisite:

Objectives:

This course is to provide students the tools required for Simulate correlate and validate theoretical concepts and understand the principles.

Outcomes:

After learning the course the students should be able to:

- 1. Solve open ended Design problem and report the solution.
- 2. Simulate the problem and correlate with theoretical concepts
- 3. Understand the impact of assumptions on the simulated results
- 4. Collect data, Analyse, interpret and report the results.

Guidelines:

- 1. Any one subject from Part A and Part B as per students elective choices
- 2. Total experiments to be conducted are Three from Part A and Three from Part B
- 3. Total: 6 experiments 12 hours

]	Detailed Syllabus:	
Ermt	Part A: Elective 1- Advanced Machine Design (ANY Three)	Dunation h
Expt.	Description Constitution Production File Made Production	Duration, h
1.	Case Studies Based on : Failure Mode Effect analysis.	2
2.	Case Studies Based on : Environment Impact Assessment	2
3.	Case Studies Based on : Design for Manufacturing and Assembly.	2
4.	Case Studies Based on: Design based on Quality and Reliability.	2
5.	Case Studies Based on: Design based on Cost	2
	Total "Knowledge Prings Ergodom"	06
	Part A: Elective 1- Mechanical Behavior of Materials (ANY Three)	
Expt.	Description	Duration, h
1.	Elasto-plastic analysis of a tensile test specimen using FEM software	2
2.	Determination of full range stress strain curve for mild steel and aluminum	2
	specimen as per ASTM -E8M	2
3.	Experimental verification of Three point bending test	2
4.	Tensile test for polymer and polymer composite	2
5.	Impact test for plastic	2
	Total	06
	Part A: Elective 1- Analysis and Synthesis of Mechanisms (ANY Three)	
Expt.	Description	Duration, h
1.	Kinematic analysis of simple mechanisms	2
2.	Kinematic analysis of complex mechanisms	2
3.	Curvature analysis simple planar mechanism	2
4.	Graphical Synthesis of path generating mechanism	2
5.	Graphical Synthesis of function generating mechanism	2
6.	Graphical Synthesis of rigid body guiding mechanism	2
7.	Analytical Synthesis of path generating mechanism, using MATLAB	2
8.	Analytical Synthesis of function generating mechanism, using MATLAB	2
9.	Analytical Synthesis of rigid body guiding mechanism, using MATLAB	2
	Total	06

	Part A: Elective 1- Mathematical Methods in Engineering (ANY Three)	
Expt.	Description	Duration, h
1.	Solution using Matlab for Power Method	2
2.	Solution using Matlab for Mass spring system	2
3.	Solution using Matlab for Least square method	2
4.	Solution using Matlab for Numerical solution to Laplace Equation.	2
5.	Solution using Matlab for Numerical solution to Heat Equation.	2
	Total	06
	Part B: Elective 2- Mechanics of Composites (ANY Three)	
Expt.	Description	Duration, h
1.	Analytical determination of strength of lamina using properties of matrix and fibres.	2
2.	Compare the theories of failure for the composite lamina using analytical formulation	2
3.	Study of various test standards for behavior testing of composite laminates.	2
4.	Determination of the stress distribution across various layers of a laminate using Classical Laminate Theory.	2
	Total	06
	Part B: Elective 2- Tribology in Design (ANY Three)	
Expt.	Description	Duration, h
1.	Case study on Tribological aspects of rolling motion / Tribo-characteristics of	,
	different materials / Evaluation of friction & wear through experiments under influencing parameters.	2
	Coefficient of friction using pin-on-disc type friction monitor	2
2. 3.	Friction in Journal Bearings Four Ball Tester	2
4.	Study of Lubricating systems with example	2 2
<u> </u>	Journal Bearing Apparatus	2
6.	Tilting pad and thrust bearing apparatus	2
	Total	06
	Part B: Elective 2- Vehicle Dynamics (ANY Three)	00
Expt.	Description Description	Duration, h
1.	Assignment on Road holding characteristics of vehicle and its control	2
2.	Assignment on analysis and optimal control of car ride model	2
3.	Assignment on ABS or Power-steering for handling analysis - single lane event	2
4.	To simulate and understand behavior of sprung / un-sprung mass & lumped mass system MBD software.	2
	Total	06
	Part B: Elective 2- Robotics (ANY Three)	
Expt.	Description Description	Duration, h
1.	Simulation of Cartesian/ cylindrical/ spherical robot.	2
2.	Simulation of Articulated/ SCARA robot.	2
3.	Virtual modelling for kinematic and dynamic verification of any one robotic structure using suitable software.	2
4.	Design, modeling and analysis of gripper	2

Platinism Eveellone

Marie 125

Program:	M. Tech. Mechanical (Design Engineering)				Semester :	Semester : II		
Course:	Course: Optimization Techniques in Design				Code: MN	MD2406		
Teaching Scheme					Evaluati	on Scheme		
Lecture		Credit	Hours	IE1	IE2	ЕТЕ	Total	
3		3	3	20	30	50	100	

Pre-requisite:

1. Engineering Mathematics

Objectives:

- 1. To introduce students to the modeling of constrained decision-making problems and optimization.
- 2. Provide students with the basic mathematical concepts of optimization.
- 3. Provide students with the modelling skills necessary to describe and formulate optimization problems.
- 4. Provide students with the skills necessary to solve and interpret optimization problems in engineering.

Outcomes:

After learning the course, the students should be able to:

- 1. Formulate mathematical programs in various practical systems and apply classical optimization techniques
- 2. Interpret the results of linear programming model and present the insights
- 3. Obtain optimum parameters for non-linear problems.
- 4. Simulate the optimized model.
- 5. Use software to solve problems using modern methods.
- 6. Apply topology optimization for design.

Detailed	l Syllabus:	
Unit	Description	Duration, h
1.	Classical Optimization Techniques Mathematical Modeling, Classification of models, single variable optimization and multi variable optimization, with and without constraints.	6
2.	Linear Programming Two phase simplex method, primal and dual Simplex Method, revised simplex method.	6
3.	Non-Linear Programming Elimination and iterative methods for one-dimensional minimization and multi dimension minimization.	6
4.	Modern Methods of Optimization Genetic algorithms, Simulated Annealing, Particle Swarm Optimization, Ant Colony Optimization, etc.	6
5.	Simulation Modeling Introduction, definition and types, limitations, various phases of modeling, Monte Carlo method, applications, advantages and limitations of simulation.	6
6.	Topology Optimization Problem formulation and parameterization of design, solution methods, topology optimization as a design tool, Complications, Combined Topology and shape optimization.	6
	Total	36

3		3	3	20	30	50	100

Pre-requisite:

1. Physics 2. Engineering Mathematics 3. Dynamics of Machinery

Objectives:

- 1. To enable students to analyse model physical systems, categorize and apply principles of Vibrations to obtain response to different excitation conditions.
- 2. Students will be able to acquire knowledge of acoustic terms their measurement and apply acoustic design principles.

Outcomes:

After learning the course, the students should be able to:

- 1. **Formulate** and **Evaluate** problems of MDOF mechanical vibrations. **Apply** the understanding to design the system.
- 2. **Formulate** the mathematical model for continuous systems and **Analyse** the effects of vibrations.
- 3. Formulate the mathematical models Transient Vibrations and study its impact on design of system.
- 4. Analyse Vibration in System and Design a Vibration Control Strategies,
- 5. Understand Random process parameters and analyse vibration response of single degree linear system.
- 6. Understand Basic principles in acoustics, measurement of sound Power and apply to analyze effectiveness in compliance to noise regulations.

Detailed	Syllabus:	
Unit	Description	Duration, h
1.	Multi Degree Freedom System Free vibration equation of motion, influence coefficient i) stiffness coefficient (ii) flexibility coefficient generalized coordinates, coordinate couplings, Lagrange's equations matrix method Eigen values Eigen vector problems, modal analysis, forced vibrations of un-damped system and modal analysis.	6
2.	Continuous System Transverse vibrations of String, Longitudinal vibration of Rods, Torsional vibrations of Shaft, Lateral vibrations of simply supported and cantilever beams,	6
3.	Transient vibrations Response to an impulsive input, Response to step input, Response to a pulse input-rectangular pulse and half sinusoidal pulse.	4
4.	Vibration Control Balancing of rotating machine, in-situ balancing of rotors, control of natural frequency, vibration isolation and vibration absorbers, Passive, active and semi-active control, free layer and constrained layer damping.	5
5.	Random Vibrations Probability, Auto and cross correlation function, spectral density, response of linear systems, and analysis of narrow band systems	6
6.	Acoustics Basics of acoustics – Terminologies speed of sound, wavelength, frequency, and wave number, acoustic pressure and particle velocity, acoustic intensity and acoustic energy density, spherical wave, Directivity factor and directivity index, levels and the decibel, combination of sound sources, octave bands, weighted sound levels. Sound Power measurement in a reverberant room, Sound power measurement in an anechoic, sound power survey measurements, Transmission of Sound: changes in media with normal incidence, changes in media with oblique incidence, sound transmission through a wall, transmission loss for walls - stiffness-controlled region - mass-controlled region - damping-controlled region,	9
	Total	36

Text Books:

- 1. Mechanical Vibrations, S. S. Rao, Pearson Education, Delhi
- 2. Theory of Vibrations with Applications, W. T. Thomson, Pearson Education, Delhi
- 3. Industrial Noise Control, Randell Barron, Marcel Dekker, Inc.

- 1. Mechanical Vibrations, G K Groover, Nem Chand & Bros, Roorkee, India
- 2. Fundamentals of Vibration, Leonard Meirovitch, McGraw Hill International Edison
- 3. Principles of Vibration Control: Ashok Kumar Mallik, Affiliated East-West Press, New Delhi.
- 4. Mechanical Vibrations, A H Church, John Wiley & Sons Inc
- 5. Mechanical Vibrations & Noise Engineering, A.G.Ambekar, Prentice Hall of India, New-Delhi.

Program:	M. Tech. Me	M. Tech. Mechanical (Design Engineering)				Semester: II		
Course:	Professional	Core Lab-II		C	Code: MMD2408			
	LAB Name	LAB Name : OT, AVA						
	Teaching Schem	ie	Evaluation Scheme					
Practical	Hours	Credit	TW	PR	OR	Total		
2	2	1	50		50	100		

Guidelines:

- 1. Total experiments to be conducted are Three from Part A and Three from Part B
- 2. Total: 6 experiments 12 hours

Pre-requisite:

Engineering Mathematics

Objectives:

- 1. Provide students with the modelling skills necessary to describe and formulate optimization problems.
- 2. Provide students with the skills necessary to solve and interpret optimization problems in engineering.

Outcomes:

After learning the course, the students should be able to:

- 1. Formulate mathematical programs in various practical systems
- 2. interpret the results of a model and present the insights (sensitivity, duality)
- 3. Use software to solve problems

Detailed Syllabus:

Part A: Optimization Techniques in Design (ANY Three)						
Expt.	Description	Duration				
1.	Mathematical modeling of a real life problem	2				
2.	Primal dual simplex method	2				
3.	Sensitivity analysis of linear problem	2				
4.	Optimization using non-linear methods	2				
5.	Optimization using modern methods vledge Brings Freedom"	2				
	Total (Any Three)	6				

Pre-requisite:

Physics Engineering Mathematics Dynamics of Machinery

Objectives:

To impart students with various Vibration and Noise Analysis Techniques, interpret data and report, to obtain the results for validation and effective understanding of system.

Outcomes:

After learning the course, the students should be able to:

- 1. Apply Vibration measurement techniques and Analyse using modern tools and technique.
- 2. Understand Basic principals in acoustics, measurement of sound Power and apply to analyze effectiveness in compliance to noise regulations.

Detailed Syllabus:		
Expt.	Part B: Advanced Vibrations and Acoustics (ANY Three) Description	Duration
1.	Case Study on - Time domain and Frequency domain analysis of signals / experimental modal analysis / machine conditioning and monitoring / fault diagnosis	2
2.	Simulation study using finite element Analysis Tool on a. Modal analysis b. Harmonic analysis c. Transient analysis	2
3.	Modal Analysis with Impact Hammer Test	2
4.	Electro Dynamic Shaker to Obtain Natural Frequency and Dynamic Studies of a Cantilever Beam.	2
5.	Case study Analysis machine noise signature and analyze effectiveness in compliance to noise regulations.	2
	Total (Any Three)	6

Text Books:

- 1. Engineering Optimization: Theory and Practice, Singiresu S. Rao, John Wiley & Sons
- 2. Mechanical Vibrations, S. S. Rao, Pearson Education, Delhi
- 3. Industrial Noise Control, Randell Barron, Marcel Dekker, Inc.

Reference Books:

- 1. Optimization Concepts and Applications in Engineering, Belegundu, Chandrupatla,
- 2. Machinery Condition Monitoring: Principles and Practices, A. R. Mohanty, CRC Press, 2014
- 3. Vibration and Acoustic: Measurement and Signal Analysis, C. Sujatha, Tata McGraw Hill Pvt. Ltd

Education

Course:	Fati	gue and Fracture	e Analysis (Electi	ive)	(ve) Code : MMD2504A			
Teaching Scheme			Evaluation Scheme					
Lecture		Credit	Hours	IE1	IE2	ЕТЕ	Total	
3		3	3	20	30	50	100	

Pre-requisite:

1. Machine Design 2. Engineering Metallurgy 3. Material Science

Objectives:

- 1. To assess fatigue life at different loading conditions
- 2. To make aware about the analysis of Fracture Mechanics of mechanical components

Outcomes:

After learning the course, the students should be able to:

- 1. Identify the cycle counting and apply the stress and strain based approach in fatigue failure.
- 2. Understand the use of instrumentation for fatigue testing as per ASTM standards.
- 3. Apply the fatigue failure analysis in different applications.
- 4. Apply linear elastic fracture mechanics to predict energy release rate for brittle fracture.
- 5. Estimate crack resistance and stress intensity factor at different crack location.
- 6. Examine the crack tip opening displacement and shape by using different approximation.

Detailed S	Syllabus
------------	----------

Unit	Description	Duration, h
1.	Fatigue Mechanics Time varying uniaxial, biaxial and multiaxial loading of components, load spectra, cycle counting, fatigue damage theories of crack initiation, stress based and strain based approach	10
2.	Fatigue Testing Data acquisition and instrumentation, classical methods of fatigue testing, ASTM standards - specimen preparation, procedure	4
3.	Special Cases in Fatigue Fatigue analysis in frequency domain, vibration fatigue, fatigue of welded structure, corrosion fatigue, high temperature and low temperature fatigue	5
4.	Linear Elastic Fracture Mechanics Mechanisms of fracture, initiation of fracture and crack propagation, stress and energy criteria and fracture - effects of geometry, Inglis theory of stress, energy concept - Griffith theory of fracture, energy balance during crack growth, modes of loading,	6
5.	Stress Intensity factors – Concept, calculation for center crack, single edge crack, double edge crack, round hole with crack, superposition of stress intensity factors, leak before break (LBB) criterion	5
6.	Elastic – Plastic Fracture Mechanics Introduction, crack tip stress state, Irwin's approximation, Dugdale's approximation, crack opening displacement, shape of the plastic zone – von Mises and Tresca yielding criteria,	6
	Total	36

Text Books:

- 1. Fatigue Testing and Analysis Theory and Practice, YUNG-LI LEE, Elsevier
- 2. Fatigue of Structures and Materials, Japp Schijve, Kluwer Academic
- 3. Metal Fatigue in Engineering, Ali Fatemi, Wiley-Interscience
- 4. Elements of Fracture Mechanics, Prashant Kumar, Mc Graw Hill Education

- 1. Metal Fatigue Analysis Handbook, YUNG-LI LEE, Elsevier
- 2. Design & Analysis of Fatigue Resistant Welded Structure, Dieter Radaj, Woodhead Publishing
- 3. Fracture Mechanics Anderson T.L., CRC Press
- 4. Fracture Mechanics, Nestor Perez, , Kluwer Academic Publishers
- 5. Fracture Mechanics An Introduction, Gdoutos E. E., , Springer
- 6. Nonlinear Fracture Mechanics for Engineers, Ashok Saxena, , CRC Press
- 7. Deformation and Fracture Mechanics of Engineering Materials, Hertzberg, R. W., John Wiley & Sons, Inc.

Program:	M. T	ech. Mechanical	(Design Enginee	ering)	Semester :	Semester : II

3		3	3	20	30	50	100	

Pre-requisite:

Engineering Mathematics

Objectives:

- 1. To perform reliability engineering analysis.
- 2. To compute reliability engineering parameters and estimates for applications in mechanical devices and manufacturing environments.

Outcomes:

After learning the course, the students should be able to:

- 1. Identify the possible faults in systems and their impacts to the overall system reliability.
- 2. Develop fault trees for a sub-system and apply various reliability models on fault analysis.
- 3. Evaluate maintenance schedules and assess the corresponding risk with appropriate techniques and tools.

Detail	6	C1	lahu

Program: M. Tech. Mechanical (Design Engineering)				Semester :	Semester : II			
Course:	Mecl	hatronics and Co	ontrol Systems (E	lective) Code: MMD2504C				
Teaching Scheme			Evaluation Scheme					
Lecture		Credit	Hours	IE1	IE2	ETE	Total	
3		3	3	20	30	50	100	

Pre-requisite:

Engineering Mathematics, Mechatronics

Objectives:

- 1. Select and Apply various sensors/transducers for suitable application
- 2. Select sensors/transducers based on static and dynamic characteristics
- 3. Understand and apply, interfacing with DAQ microcontroller
- 4. Model mechanical and electromechanical systems
- 5. Design controller in time and frequency domain
- **6.** Understand control actions such as Proportional, derivative and integral and study its significance in industrial application

Outcomes:

After learning the course, the students should be able to:

- 1. Analyse static and dynamic characteristics of instruments and Select and Apply sensors/ transducers for measurements of physical quantities.
- 2. Apply interfacing techniques to acquire measurement data from external environment and apply filtering techniques to attenuate measurement noise.
- 3. Formulate the mathematical model in by using transfer function and state space modelling approach.
- 4. Analyze system stability based on pole location and by Routh-Hurwitz criterion.
- 5. Design the control system for meeting desired specification in time domain based on transient response.
- 6. Design the control system in frequency domain and Analyze system stability in open and closed loop in frequency domain by Bode plot.

Detailed Syllabus:

Unit	Description	Duration, h
3.	Fundamentals of Instrumentation Classification of instruments; Characteristics of Measurement system: Static and Dynamic;	
	Sensors and Transducers: Force, Speed Measurement, Strain Measurement, Vibration and Noise Measurement: Accelerometer, Laser Doppler Vibrometer, Temperature: Pyrometer, Varying Resistance; pressure: Pirani, Mcleod; flow rate: Ultrasonic; and humidity measurement.	6
2.	Interfacing with Microcontroller Data Acquisition System, Analog and Digital Signals, Bandwidth, Sampling theorem, ADC: Successive Approximation, Dual slope, DAC: R-2R, binary weighted, Noise Filters: Low Pass, Band Pass and High Pass; Interfacing of sensors/actuators with Arduino	6
3.	Mathematical Modelling of Dynamic Systems Classification of modelling, Modelling of Mechanical, Electro-mechanical, Transfer function, State space modelling, Block diagram representation and reduction	6
4.	Stability analysis of Dynamic Systems Poles and Zeros, System response of second order system, Transient response specifications, Absolute and relative stability, System Stability analysis using Poles and Zeros of System, Stability of system using Lyapunov's criterion, Stability of system based on Routh Hurwitz criterion	6
5.	Control in Time Domain Introduction to open loop and closed loop control, Conversion of transfer function to state space. Controllability and observability of system, Full state feedback control of system using pole placement technique, Pole placement using Ackerman's formula	6
6.	Control in Frequency Domain Frequency response of system, Bode plot to determine Phase margin and gain margin, PID control system design and tuning PID parameters based on transient and frequency response.	6
	Total	36

Teaching Scheme			Evaluation Scheme					
Lecture		Credit	Hours	IE1	IE2	ЕТЕ	Total	
3		3	3	20	30	50	100	

Pre-requisite:

- 1. Theory of Machines
- 2. Machine Design

Objectives:

- 1. To reasilze the importance of materials in both in product and service
- 2. Understand the benefit of an efficient material handling system
- 3. Identify and select various types of material handling equipments
- 4. Design of material handling systems for variety of scenario pertaining to manufacturing and service industry.

Outcomes:

After learning the course, the students should be able to

- 1. Identify the use and importance of material handling
- 2. Identify different loads and classify material handling based on application
- 3. Apply the design procedures of various material handling equipment & components and design the material handling system.
- 4. Design load lifting & load movement attachments with proper design consideration understand the use of automation in material handling.
- 5. Design the auxiliary equipment

Detailed Syllabus:

Unit	Description	Duration, h
1.	Material handling system Principles and features of material handling system, importance, terminology, objectives and benefits of better material handling, classification of material handling equipment	6
2.	Selection of material handling equipment Choice of material handling equipment, factors affecting for selection, general analysis procedures, basic analytical techniques, the unit load concept	6
3.	Design of cranes Hand-propelled and traveling mechanisms of cantilever and monorail cranes, design considerations for structures of rotary cranes with fixed radius, fixed post and overhead traveling cranes, stability of stationary rotary and traveling rotary cranes,	6
4.	Design of cranes Electric overhead travelling crane - essential parts, design parameters, structural considerations, end carriages, long and cross travel mechanisms, brakes, motor selection, safety arrangements, electrical control system	6
5.	Load lifting attachments Load chains and types of ropes used in material handling system, forged, standard and Ramshorn hooks, crane grabs and clamps; grab buckets; electromagnet; drums, sheaves, sprockets	6
6.	Study of bulk material handling systems Design consideration for conveyor belts, Objectives of storage; bulk material handling; gravity flow of solids through slides and chutes; storage in bins and hoppers; screw conveyor, vibratory conveyor, pneumatic & hydraulic conveyor (classification, types, principles of operation)	6
	Total	36

Pre-requisite:

Vectors, Programming languages.

It is recommended to have knowledge of any geometric modeling software.

Objectives:

This course intends to give students an insight into use of computers in various stages of the product development like conceptualization, geometric modelling, design and graphical representation.

Outcomes:

After learning the course, the students should be able to:

- 1. Evaluate mathematical transformations and projections of rigid bodies.
- 2. Design & model curves, surfaces & solids.
- 3. Develop codes to solve engineering problems.
- 4. Implement various algorithms studied in Computer Graphics

Detailed Syllabus:

Unit	Description	Duration, h
1.	Computer aided Design – An insight A typical product cycle, the design process, computers for design. CAD tools for the design process, Hardware requirements in CAD, Input / Output devices; Graphics Displays, graphical memory, Concept of Coordinate Systems, Software requirements in CAD	6
2.	Geometric Transformations Homogeneous representation; Translation, Scaling, Mirror Reflection, Rotation, Shearing in 2D and 3D; Orthographic and perspective projections.	6
3.	Curves and Surfaces Lines, scan conversion algorithms for lines, point on a line, parallel lines, perpendicular lines, distance of a point, Intersection of lines, Circle, Ellipse and general curves (parabola and hyperbola), Cubic Spline: equation, properties and blending. Bezier Curve: equations, properties; Properties and advantages of B-Splines and NURBS. Various types of surfaces along with their typical applications.	6
4.	Computer Aided Geometric Design - Curves Plane Curves, Space Curves, Bezier Curve, Explicit, Implicit, Parametric curves. The de Casteljau Algorithm, de Boor Algorithm, NURBS Theory, Properties And Algorithms, Geometric continuity, Projection Of Point On Curve, Curve-Curve Intersection, Hermit, Bezier, B-Spline curves	6
5	Computer Aided Geometric Design - Surfaces Trim Surfaces, Curve and Surface Subdivision, Curve And Surface From Algebraic Equation, Curve And Surface Fitting, Principal curvatures, Curve-Surface Intersection, Surface-Surface Intersection, Projection Of Curves On Surfaces, Projection Of Surface On Surfaces	6
6	Solid Modelling and Applications Introduction, solid representation, Concept of Topology, Boundary Representations (B-Rep), Constructive Solid Geometry, Feature Based Modeling - Part Modeling, Assembly, Drawings, Extrusion, Revolve, Shell, Draft, Patterning, Surface and Solid Boolean Operations	6
	Total	36

Pre-requisite: Theory of Machines, Engineering Mathematics

Objectives:

- 1. To Kinematically and dynamically analyse planar bodies
- 2. To Kinematically and dynamically analyse rigid bodies

Outcomes:

After learning the course, the students should be able to:

- 1. Derive equations of motion for interconnected bodies in multi-body systems with three dimensional motion.
- 2. Implement and analyze methods of formulating equations of motion for interconnected bodies.
- 3. Write programs to solve constrained differential equations for analyzing multi-body systems.
- 4. Simulate and analyze all types of static and dynamic behaviors of the multi-body systems including the kineto-static analysis.

	including the kineto-static analysis.	
Detail	ed Syllabus	
Unit	Description	Duration, h
1.	Basic principles for analysis of multi-body systems The constraints for planar kinematic analysis. Revolute, prismatic, gear and cam pairs. The automatic assembly of the systems of equations for position, velocity and acceleration analysis. Iterative solution of systems of non-linear equations.	6
2.	Computation of Forces, planar Geometry of masses, computation and assembly of mass matrix. Computation of planar generalized forces for external forces and for actuator-spring-damper element.	6
3.	Computation of Forces, special Computation of spatial generalized forces for external forces. Computation of reaction forces from Lagrange's multi- pliers.	6
4.	Dynamics of Planar Systems Dynamics of planar systems, Simple applications of inverse and forward dynamic analysis.	6
5.	Kinematics of rigid bodies in space Reference frames for the location of a body in space. Euler angles and Euler parameters. Screw motion in space. Velocity, acceleration and angular velocity. Relationship between the angular velocity vector and the time derivatives of Euler parameters.	6
6.	Kinematic analysis of spatial systems Basic kinematic constraints. Joint definition frames. The constraints required for the description in space of common kinematic pairs (revolute, prismatic, cylindrical, and spherical). Equations of motion of constrained spatial systems.	6
	Total	36

Pre-requisite:

Objectives:

This course is to provide students the tools required for Simulate, correlate and validate theoretical concepts and understand the principles.

Outcomes:

After learning the course the students should be able to:

- 1. Solve open ended Design problem and report the solution.
- 2. Simulate the problem and correlate with theoretical concepts
- 3. Understand the impact of assumptions on the simulated results
- **4.** Collect data, analyse, interpret and report the results.

Guidelines:

- 1. Any one subject from Part A and Part B as per students elective choices
- 2. Total experiments to be conducted are Three from Part A and Three from Part B
- 3. Total: 6 experiments 12 hours

]	Detailed Syllabus:	
	Part A: Elective 1- Fatigue and Fracture Analysis (ANY Three)	\
Expt.	Description	Duration
1.	Case Studies based on Rain Flow Counting Technique	2
2.	Stress / Strain Based Fatigue Analysis	2
3.	FEA Simulation of fatigue / Fracture Problem	2
4.	Crack tip stresses using Photoelasticity	2
5.	Stress Analysis using Image Processing data Brings Freedom:	2
	Total	06
	Part A: Elective 1- Reliability in Engineering Design (ANY Three)	
Expt.	Description	Duration
1.	Characteristics of Binomial and Poisson distributions	2
2.	Characteristics of Normal and Log-Normal distributions	2
3.	Determination of MTTF for series and parallel systems	2
4.	Evaluation of basic probability indices for series and parallel systems	2
5.	Markov Analysis of system	2
6.	Reliability allocation to system	2
7.	Failure mode effects analysis, severity / criticality	2
	Total	06
	Part A: Elective 1- Mechatronics and Control Systems (ANY Three)	
Expt.	Description	Duration
1.	Interfacing of any sensor / actuator with Arduino	2
2.	Modelling and Analysis in Time Domain: State Space Modelling of MIMO/SISO System using MATLAB and Simulink.	2
3.	Modelling and Analysis in Frequency Domain: Transfer Function Modelling of MIMO/SISO System using MATLAB and Simulink	2
4.	Mapping of pole- zero and analysis of system stability of mechanical system	2
5.	Design of full state feedback controller / PID controller (software based)	2
	Total	06

	Part B: Elective 2- Design of Material Handling Equipment (ANY Three)	
Expt.	Description	Duration
1.	Case Studies Based on	
	Use and importance of different material handling equipment's.	2
2.	Safety in Material handling system.	2
3.	Design aspects and failures in the material handling system	2
4.	Design of any one material handling system based on Manufacturing assembly and cost consideration.	2
	Total	06
	Part B: Elective 2- Computer Aided Design (ANY Three)	
Expt.	Description	Duration
1.	Curves: Line DDA, Line Bresenham, Circle Bresenham	2
2.	Curves & Clipping: Mid-point ellipse, Window Clipping	2
3.	Transformations: Translation, Rotation, Scaling, Shear, Mirror	2
4.	Transformations: Combination of above	2
5.	Curves: Bezier curve, B-spline Curve, Hermite Curve,	2
6.	Surfaces: Lofted Surfaces, Bezier surface, B-spline Surface	2
	Total	06
	Part B: Elective 2- Multi-body Dynamics (ANY Three)	
Expt.	Description	Duration
1.	Velocity and acceleration analysis of planar systems	2
2.	Constraint analysis for planar kinematic analysis for revolute, prismatic, gear and cam pairs	2
3.	Dynamic analysis of planar systems	2
4.	Inverse and forward dynamic analysis	2
5.	Kinematic analysis of rigid bodies	2
6.	Kinematic analysis of spatial systems	2
7.	Reaction forces from actuator-spring-damper system	2
	Total	06

"Knowledge Brings Freedom"

Objectives:

- 1. To facilitate holistic growth
- 2. To make the students aware about the significance of Soft Skills and English Aptitude
- 3. To develop the ability of effective communication through individual and group activities
- 4. To expose students to right attitude and behavioural aspects and build the same through various activities

Outcomes:

After learning the course the students should be able to:

- 1. Express effectively through verbal/oral communication skills
- 2. Prepare for group discussions/meetings/interviews and presentations
- 3. Operate effectively in multi-disciplinary and heterogeneous teams through the knowledge of team work, inter personal relationships, conflict management and leadership activities

Guidelines:

- 1. Total experiments to be conducted are Six out of eight
- 2. Total: 6 experiments 12 hours

Skill Developmen <mark>t L</mark> ab (ANY Six)							
Expt.	Description	Duration h					
1.	Group Discussion: Make students aware of proper and globally accepted ethical way to handle work, colleagues and clients. Develop group communication skills. Learn to speak up one's opinion in a forum. Cultivate the habit of presenting solution-driven analytical arguments making them contributors in any team.	2					
2.	Public Speaking: Any one of the following activities may be conducted: 1. Prepared speech (Topics are given in advance, students get 10 minutes to prepare the speech and 5 minutes to deliver.) 2. Extempore speech (Students deliver speeches spontaneously for 5 minutes each on a given topic)	2					
3.	Writing An Article On Any Social Issue: Build writing skills, improve language and gain knowledge about how to write an article/ report	2					
4.	Reading and Listening skills: The batch can be divided into pairs. Each pair will be given a article by the facilitator. Each pair would come on the stage and read aloud the article one by one. After reading by each pair, the other students would be asked questions and needful corrections in the article. The facilitator can evaluate the students for reading and listening skills.	2					
5.	Debate On Current Affairs/ Social Relevance Topics: Cultivate the habit to present forceful arguments while respecting the opponents perspective and enhance verbal skills.	2					
6.	Telephonic etiquettes: To teach students the skills to communicate effectively over the phone. Students will be divided into pairs. Each pair will be given different situations, such as phone call to enquire about job vacancy, scheduling a meeting with team members, phone call for requesting of urgent leave from higher authorities. Students will be given 10 min to prepare. Assessment will be done on the basis of performance during the telephone call.	2					
7.	Email etiquettes: To provide students with an in-depth understanding of writing formal emails.	2					
8.	Mock interviews: Guide students and conduct mock interviews	2					
	Total	12					

Text Books:

- 1. B. Mitra, Personality Development and Soft Skills
- 2. S. Lucas, The Art of Public Speaking

- 1. M. Weaver, Empowering Employees Through Basic Skills
- 2. G. Ratigan, Aced: Superior Interview Skills to Gain an Unfair Advantage to Land Your DREAM JOB!

Program:	M. Tech. Mechanical (Design Engineering)				Semester : II	
Course:	Integrated Mini	-Project			Code: MMD	2701
Teaching Scheme Evalu				Evalu	ation Scheme	
Practical	Hours	Credit	IE2	TW	OR	Total
6	6	3	50		50	100

Pre-requisite:

- 1. Basics of Design, Finite element Methods, Vibrations and Acoustics, Composites
- 2. Basics of MATLAB and Simulation software's.

Objectives:

- 1. To understand the 'Product Development Process' including budgeting through Mini Project.
- 2. To plan for various activities of the project planning and execution.
- 3. To build, design and implement real time application preferably multidisciplinary domain using available platforms.

Outcomes:

After learning the course the students should be able to:

- 1. Understand, plan and execute a Mini Project.
- 2. Design real time application.
- 3. Prepare a technical report based on the Mini project.
- 4. Deliver technical seminar based on the Mini Project work carried out.
- 5. Understand publication and copyright process of research.

Guidelines: Total: 36 hours

- 1. Individual student need to design and demonstrate Mini-project under the guidance of allocated guide.
- 2. Students can choose area of project in field of Multi-disciplinary Designing considering their future implementation in Major Project in second year
- 3. The hardware implementation on the board and software simulation is compulsory.
- 4. Mini-Project Report should be submitted as a compliance of term work associated with subject.
- 5. Paper publication associated with mini-project as research outcome is appreciable.
- **6.** Mini-project work preferably should be completed in laboratory.

Detailed Syllabus:

	Integrated Mini-Project	
Sr. No.	Activity "Knowledge Brings Freedom"	Duration, h
1.	Week 1 & 2 : Mini-project guide allotment, finalization of topic and platform, Planning of the work	6
2.	Week 3 & 4: Literature review and specification and Methodology Finalization, Review 1 for finalization of topic and specification.	6
3.	Week 5 & 6 : Simulation of Idea on appropriate software tools and finalization of hardware platform	6
4.	Week 7 & 8: understanding platform implementation and related software flow and execute block level design, Review 2 to understand the progress of the project	6
5.	Week 9 & 10: Mini Project Report writing and publication or copyright planning and execution.	6
6.	Week 11 & 12: Demonstration of Project work and Final Review for submission and term work compliances.	6
	Total	36

Course Syllabus Semester-III

Antimiem Eveelluneu

Program:	M. Tech. (Mechanical) – Design Engineering Sem				emester: III	
Course:	Dissertation Phase – I [Company/ In-house project] Code: MMD3702					02
T	Seaching Scheme/we	Evaluation Scheme				
Practical	Hours	Credit	IE2	PR	OR	Total
20	20	10	100		100	200

Pre-requisite:

Basic knowledge of Mechanism and Machine Design, Mechanical system design, Basics of Analysis software, MATLAB programming

Objectives:

- 1. To understand the product/process development including budgeting.
- 2. To plan for various activities of the major project and channelize the work towards product /process development.
- 3. To enable students to apply the knowledge about research design and methods to develop their project.
- 4. To inculcate research culture in students for their technical growth.

Outcomes:

After learning the course the students should be able to:

- 1. Understand, plan and execute an original Project work with appreciable research outcomes.
- 2. To integrate theory and practice in relation to the identified area of study.
- 3. To demonstrate research skills in the chosen area of study.
- 4. Prepare good quality technical report based on the project.
- 5. Publish good quality paper in reputed journal and present their work in reputed conferences.

Guidelines:

- 1. Individual student need to design and demonstrate project under the guidance of allocated guide.
- 2. Sponsored Project or Project Internship is acceptable considering postgraduate scope.
- 3. The physical / soft model and validation of results is compulsory.
- 4. Project Report-1 should be submitted as a compliance of term work associated with subject.
- 5. At least 2 paper publications are expected as research outcome of Project Stage-I (Conference or reputed journal) and 40% of planned project work should be completed for submission of Dissertation Phase-I
- 6. Total Duration: 120 hours are contact hours with guides and for reviews; 120 hours are expected to be spend by students to satisfy all project requirements and implementations.

Plan of Activitie	es	
Sr. No.	Activity	Duration, H
1.	Week 1, 2 and 3: Guide allotment, applying for sponsorship and project internship, finalization of topic and platform, Planning of the work.	30
2.	Week 4 & 5: Literature review, objectives and methodology Finalization, Review 1 for finalization of topic and objectives.	20
3.	Week 6, 7 & 8: understanding, analytical / numerical calculations and design of components, Review 2 to understand the progress of the project	30
4.	Week 9 & 10: preparation of the experimentation plan and measurement system for experimentation	20
5.	Week 11 & 12: Project Report writing and publication or copyright planning and execution. Demonstration of Project work and Final Review for submission and term work compliances	20
	Total	120

Program:	M. Tech (Me	M. Tech (Mechanical) – Design Engineering Semester: III				
Course:	Seminar	Seminar				IMD3703
Teaching Scheme/week			Evaluation Scheme			
Practical	Hours	Credit	IE2	TW	OR	Total
4	4	2		50	50	100

Guidelines:

- 1. Individual student needs to study recent topics in the field of Design Engineering under the guidance of allocated guide.
- 2. Students can choose topic related to design of mechanical system considering recent trends and its societal importance.
- 3. The extensive Literature Survey, Mathematical Modeling of particular method and valuable conclusion is expected from seminar study.
- 4. Seminar Report should be submitted as a compliance of term work associated with subject.
- 5. At least 1 review paper publication is expected as research outcome of seminar.
- 6. Total Duration: 24 Contact Hours and 24 Hours should be spent by students on completion of related activities and requirements.

Course Outcomes

- 1. To acquire the basic skills to for performing literature survey and paper presentation
- 2. To provide students better communication skills
- 3. To describe the current topics in the domain of study based on recent publications
- 4. To be able to write a report

	Seminar Activities				
Sr. No.	Activity	Duration, H			
1.	Week 1, 2 & 3: Guide allotment, finalization of topic, Planning of the work. Review-1 conduction	6			
2.	Week 4 & 5: Literature review and methodology of the selected topic.	4			
3.	Week 6, 7 & 8: Mathematical model and findings and its analysis Review-2 conduction	6			
4.	Week 9 & 10 : Comparison of findings with findings in literature	4			
5.	Week 11 & 12: Seminar Report writing and publication or copyright planning Final Review conduction.	4			
·	Total	24

4	4	2	50		50	100

Guidelines:

- 1. Individual student need to attempt for internship with the help of PCCOE T&P cell in the field of Mechanical Design under the guidance of allocated guide.
- 2. If not get selected for any internships, student can choose extension of mini-project / entrepreneurship opportunity from PCCOE, related to Mechanical design considering recent trends and its societal importance.
- 3. The idea presentation is expected from the student based on the topic.
- 4. Internship report should be submitted as a compliance of term work associated with subject.
- 5. Total Duration: 24 Contact Hours and 24 Hours should be spent by students on completion of related activities and requirements.

	Internship / In-house / Entrepreneurship activity	
Sr. No.	Activity	Duration, H
1.	Week 1, 2 and 3: Guide allotment, Application of internships, finalization of topic, Planning of the work. Review-1 conduction	6
2.	Week 4 & 5: Internship/ Mini-project/ Entrepreneurship activity implementation as per requirements	4
3.	Week 6, 7 & 8 : Review-2 of Activities	6
4.	Week 9 & 10: Interaction of Guides with Industry, Poster Presentation	4
5.	Week 11 & 12: Internship Report writing and publication or copyright planning Final Review conduction.	4
	Total	24

"Knowledge Brings Freedom"

Program: M. Tech. Mechanical (Design Engineering)				Semester :	Ш	
Course:	Course: MOOCs			Code :	MMD3981	
Teaching Scheme/week			Evaluation Scheme			
Practical	Hours	Credit	IE2	TW	OR	Total
4	4	2	50		50	100

Guidelines:

- 1. Individual student needs to register for MOOC course of their interest or Entrepreneurship related trainings.
- 2. Weekly assignments need to be completed regularly as per requirement of course, which will be considered for internal assessment of course.
- 3. The certification of course or training is mandatory.
- 4. Oral presentation of course/ training will be taken at the end of semester
- 5. Total duration: 24 contact hours and 24 hours should be spent by students on completion of related activities and requirements.

Program: M. Tech. (Design Engineering)			Semester : III

4	4	2	50		50 100		

Pre-requisite:

Any Engineering Graduate with Innovation and Design thinking knowledge

Objectives:

- 1. To acquaint with Entrepreneurial qualities.
- 2. To apply entrepreneurship in Engineering Courses.
- 3. To imbibe Entrepreneurial capabilities in engineering students.

Outcomes:

6.

After learning the course, the students should be able to:

- 1. Motivate students to think about Entrepreneurship alternative to employment.
- 2. Registering students for Startup / Udyam registration of MSME.

Detailed	Syllabus:	
Unit	Description	Duration, H
1.	Introduction to Entrepreneurship and its importance	04
2.	Achievement Motivation. Case Studies of Indian Entrepreneurs	04
3.	Product Identification, Market Survey	04
4.	Whom to contact for what? Financial Management,	04
5.	Rusiness Planning	04

Annexure-I Open Electives Syllabus

Progress Credibility Confidence
Optimism Excellence

Program:	rogram: M. Tech. Mechanical (Heat Power Engineering)			Semester: I			
Course: Electronic Cooling (Open Elective)			Code: 1	MMH1601	lA		
Teaching Scheme			Evaluation Scheme				
Lecture	Hours	Credit	IE1	IE2	ЕТЕ	Total	
2	2	2	20		30	50	

Pre-requisite:

Thermodynamics, Fluid Mechanics, Heat Transfer

Objectives:

- 1. To establish fundamental understanding of heat transfer in electronic equipment.
- 2. To select a suitable cooling processes for electronic components and systems.
- 3. To increase the capabilities in design and analysis of cooling of electronic packages.
- 4. To analysis the thermal failure for electronic components and define the solution.

Outcomes:

After learning the course, the students should be able to

- 1. Understand Heat transfer processes involved in electronics cooling.
- 2. Analyze thermal failure for electronic components and define the solution.
- 3. Assign the best cooling method for each individual application.
- 4. Design cooling system for any electronic device and select Best packaging approach for any design.

Detailed Syllabus:

Unit	Description	Duration, h
1.	Introduction to Electronics Cooling Introduction, Packaging Trends and Thermal Management, Basics of Heat Transfer, Conduction Heat Transfer, Multi-Dimensional Conduction, Transient Conduction, Natural Convection in Electronic Devices, Forced Convection Heat Transfer, Radiation Heat Transfer, contact and spreading resistances.	06
2.	Electronics Cooling Methods in Industry Thermal interface and phase change materials, passive and novel air cooling approaches, Heat Sinks, Heat Pipes in Electronics Cooling, Thermoelectric Cooling, Liquid Immersion Cooling (Single and Two-phase), Cooling Techniques for High Density Electronics	06
3.	Packaging of Electronic Equipments Components of Electronic Systems, Packaging of Electronic Equipment, Conduction Cooling for Chassis and Circuit Boards, Chip/circuit material for augmenting heat transfer.	06
4.	Control Parameters Measurement and simulation Temperature & humidity requirement, CFD analysis for Airflow & temperature evaluation, thermography etc	06
	Total	24

Text Books:

- 1. Dave S. Steinberg," Cooling Techniques for Electronic Equipment ", Second Edition, John Wiley & Sons, 1991.
- 2. Frank P. Incropera, "Introduction to Heat Transfer", Fourth Edition, John Wiley, 2002.

Program:	M. Tech. (Mechanical)- Heat Power Engineering				Semester: I	
Course:	Green Building	Green Buildings (Open Elective)			Code: MMH16	01B
	Teaching Scheme Eva			Evalua	tion Scheme	
Lecture	Hours	Credit	IE1	IE2	ЕТЕ	Total
2	2	2	20		30	50

Pre -requisite:

Basics of air conditioning Basics of building construction

Objectives:

- 2. To develop a multidisciplinary approach to the energy supply and use in new and existing buildings
- 3. To develop knowledge and understanding of system solutions that provide optimal indoor environment in buildings in an environmentally and cost-effective way
- 4. To create awareness of different building rating tools

Outcomes:

After learning the course, the students should be able to:

- 1. Should be able to identify features of an energy efficient building system
- 2. Learner should be able to apply simulation programs of buildings to perform energy calculations, evaluate the relationship between energy use, indoor comfort
- 3. Learner should be able to evaluate and justify energy-saving measures in existing building on the basis of engineering and economic feasibility
- 4. Learner should be able to apply the principles of energy management to obtain buildings that can be certified

Detaile	ed Syllabus:	
Unit	Description	Duration, h
1	Overview and comparison of green building rating systems What is green building, conventional building practices versus integrated design process, comparison of USGBC LEED, IGBC, GRIHA, EDGE and other green building rating systems, Conducting feasibility studies, reference standards, key definitions, synergies between various credit categories, understanding building forms, site level features, microclimate features	6
2.	Resource Efficiency Energy efficiency in buildings, Water efficiency – indoor water use, rainwater harvesting, irrigation water use, wastewater systems, strategies for reducing water consumption Waste management – source reduction, reduce – recycle – reuse, strategies for waste management, construction waste management plan	6
3	Health and Wellness Introduction to indoor air quality, ASHRAE 62.1 overview and requirements, ventilation rate procedure method, key parameters affecting indoor environment, IAQ management plan Daylight and views, strategies to enhance daylight availability, Overview of WELL standard for buildings, impact of VOCs and hazardous chemicals on human health	4
4	Site features Erosion and sedimentation control, water efficient landscaping and irrigation practices, microclimate, heat island effect, exterior lighting pollution, Location and transportation, transportation management strategies and planning	2
5	Materials and resources Low-embodied energy materials, environmental product declarations (EPDs), overview of material categories of IGBC, LEED & GRIHA, life cycle analysis and its application, overview of software tools for LCA,	5
6	Government schemes and incentive programs Funding and Incentives for green building rating programs, requirements of NBC 2016 related to sustainability, local byelaws, model building code	1
	Total	24

2	2	2	20		30	50

Pre-requisite:

Objectives:

- 1. Students able to model any physical system for real-time applications
- 2. Students able to simulate any physical system for real-time applications

Outcomes:

After learning the course, the students should be able to:

- 1. Develop mathematical model for practical problem
- 2. Develop Bond Graph model for system
- 3. Apply transfer function and State space model techniques
- 4. Simulate the system using suitable software and Estimate parameters by optimization

Unit	Description	Duration
1.	Introduction to Modelling and Simulation, Basic systems, Introduction and Types of Mathematical modelling, Basic building blocks Mechanical, Electrical, Thermal systems.	6
2.	Bond Graph Modelling of Dynamic Systems: Representation, Elements, Single, Two and multiports Causality, Application to basic Mechanical, Electrical and Electromechanical system	6
3.	Dynamic Response and System Transfer Function: Poles, Stability Block diagram/Signal flow diagram/State Space formulation and Frequency response	6
1.	Simulation and Simulation application Parameter Estimation, System Identification and Optimization	6

Course Objective:

- 1. To provides an in-depth understanding of Municipal waste characteristics and management.
- 2. To make aware about regulations in the area municipal waste management.
- 3. To equip with the methods of environment risk assessment of waste.
- 4. To provide an in-depth understanding of Physiochemical and biological treatment of Municipal waste.
- 5. To be able to design the land-fields for the smart cities.

Course Outcomes:

The learners will be

- 1. Identify and evaluate the sources; composition; generation rates, methods of separation and collection methods of municipal waste treatment.
- 2. Evaluate and analysis the risk and methods of handling the hazardous and radioactive waste based on health effects.
- 3. Evaluate the Physiochemical and biological waste for its treatment and disposal
- 4. Design the land field for solid and hazardous wastes collection and removal.

Detailed Syllabus

Unit	Description	Duration, h
1.	Municipal Solid Waste Management Fundamentals Sources; composition, generation rates, collection of waste, separation, transfer and transport of waste, treatment and disposal options. Municipal waste management and handling rules for solid waste, hazardous waste, biomedical waste, fly ash, recycled plastics usage and batteries	6
2.	Hazardous and Radioactive Waste Management Fundamentals Characterization of waste, fate and transport of chemicals, health effects, Fundamentals sources, measures and health effects; nuclear power plants and fuel production; waste generation from nuclear power plants; disposal options	6
3.	Physiochemical Treatment of Solid waste Physicochemical Treatment of Solid and Hazardous Waste Chemical treatment processes for MSW (combustion, stabilization and solidification of hazardous wastes); physicochemical processes for hazardous wastes (soil vapour extraction, air stripping, chemical oxidation); ground water contamination and remediation	6
4.	Biological Treatment of Solid waste and landfill design Biological Treatment of Solid and Hazardous Waste Composting; bioreactors; anaerobic decomposition of solid waste; principles of biodegradation of toxic waste; inhibition; cometabolism; oxidative and reductive processes; slurry phase bioreactor. Landfill design Landfill design for solid and hazardous wastes; leachate collection and removal; landfill covers; incineration	6

Program:	M. Tech. Mecl	M. Tech. Mechanical (Heat Power Engineering) Semester :				
Course:	Battery Mana	gement for Electric V	ehicle (Open	Elective)	Code: MMH26	02B
	Teaching Schen	Evaluation Schemo				
Lecture	Hours	Credit	IE1	IE2	ЕТЕ	Total
2	2	2	20		30	50

Pre-requisite: Basics of Electrical Engineering,

Objectives:

- 1. To understand the various battery performance parameters and types of batteries used for EV applications
- 2. To understand the requirements of battery management system
- 3. To make the learners conversant with Equivalent Circuit Cell Modeling of Battery
- 4. To make the learners conversant with SOC estimation
- 5. To make the learners conversant with Battery Pack Balancing and Power Estimation
- 6. To make the learners aware of thermal issues of Lithium ion battery and thermal management system

Outcomes:

After learning the course,

- 1. the learners will be able to select battery for EV application and design battery pack
- 2. the learners will be able to estimate available energy and power of battery pack
- 3. The learners will be able to simulate charge discharge characteristics of a battery using equivalent circuit model
- 4. the learners will be able to estimate SOC and SOH of battery
- 5. the learners will be able to understand various methods of battery pack balancing
- 6. the learners will be able to estimate heat generation inside battery and propose cooling strategy for the battery pack.

Detailed Syllabus				
Unit	Description	Duration, h		
1.	Introduction to battery-management systems Battery terminology and performance parameters, Types of electrochemical cells, Lithium Ion Cells components, primary functions and components of BMS BMS design requirements Primary functions of BMS, sensing voltage, current and temperature of cell and battery pack, estimation of cell SOC and battery pack SOC, Estimation of available energy and power of cell and battery pack	6		
2.	Equivalent Circuit Cell Model (ECM) Modeling OCV and SOC, Modeling voltage polarization, Warburg impedance, Estimation of Model parameter values: OCV, Columbic Efficiency, total capacity, temperature dependence of OCV, modeling hysteresis, using the ECM to simulate constant voltage/ power charge/ discharge characteristics	5		
3.	State-of-Charge (SOC) Estimation and Battery Pack Balancing Different approaches to estimating battery cell SOC, Kalman-filter method of SOC estimation: linear Kalman filter, extended Kalman filter Reasons of battery pack unbalancing, criteria for specifying a balancing set point and when to balance a battery pack, Passive balancing methods for battery packs, Active balancing methods for battery packs: capacitor-based circuits, transformer-based circuits, Estimation of available battery power using a simplified cell model	7		
4.	Battery Thermal Management Heat Generation inside battery, Thermal issues of Lithium Ion Battery, Operating temperature range, Energy analysis and Thermal modeling of LIB, Cooling strategies in thermal management: Air cooling, liquid cooling, PCM based cooling, effect of parameters like cell arrangement, spacing, fluid velocity etc.	6

Program:	M. Tech. Mechanical (Heat Power Engineering)				Semester : II	
Course:	Renewable E	nergy Sources (C	pen Elective)		Code: MMH2602	C
	Teaching Scheme Evaluation Scheme					
Lecture	Hours	Credit	IE1	IE2	ЕТЕ	Total
2	2	2	20		30	50

Pre-requisite: Thermodynamics; Fluid Mechanics; Heat Transfer; Elements of Electrical Engineering; Economics

Objectives:

Following concepts to be taught to the students,

- Demonstrate significance of analysis solar and Wind Resources Sources and design technologies of their utilization
- 2. Expose them to conceptualize and design renewable energy appliances and equipment
- 3. Enable them to independently analyze, implement and asses the real-life systems
- 4. Develop a research insight about renewable technologies so as to motivate all concerned for their enhanced deployment

Course Outcomes:

- 1. To be able to determine the fundamental performance of characteristics of solar thermal, photovoltaic and wind energy systems
- 2. Enable the students to estimate the potential of solar and wind resources
- 3. To be able to understand the fundamentals of energy conversion from biomass, geothermal, tidal and ocean thermal energy conversion systems
- 4. To be able to determine the economic feasibility of renewable energy technologies

Unit	Description	Duration, h
1.	Solar energy Potential of Renewable energy sources (Flow & not stocks), Current scenario of worldwide installed capacity Solar- Earth Geometry_for assessment of available solar radiation,_Solar radiation estimation, instruments for measurement Solar thermal collectors – General description and characteristics: Flat plate collectors – Heat transfer processes – Short term and long-term collector performance. Solar concentrators – Aspects of Design, and performance evaluation. Solar Photovoltaic Systems— Working, Constructional details & Performance Assessment for Technmo-economic evaluation / feasibility	6
2.	Wind energy - Principles of wind energy conversion – Site selection considerations, Wind resource / energy potential measurement, wind electric generator components, Wind power plant design – <i>Aerodynamics and performance</i> , vertical vs. Horizontal axis design, and energy wheeling and banking concepts. Types of wind power conversion systems – Operation, maintenance and economics	6
3.	Energy from biomass <u>-</u> Sources of biomass – Different species, Conversion of biomass into fuels – Energy through fermentation – Pyrolysis, gasification and combustion – Aerobic and anaerobic bioconversion, Properties of biomass Biogas plants – Types of plants – Design and operation – Properties and characteristics of biogas.	5
4	Biogas / Producer Gas Technology, Engines - Constructional, Operational & Performance aspects Geothermal, Tidal and Wave Energy Conversion	7
4	Geothermal, Italia and wave Energy Conversion Geothermal energy: hot springs and steam ejection site selection, power plants, and economics. Environmental impacts, Economic and social considerations, Availability, system development and limitations, Wave and tidal energy –Scope and economics, Introduction to integrated energy systems. Other plants: Fuel cell-based power plants, tidal and wave energy plant design	1

- **9.** Bureau of Energy Efficiency Volume 1

List of Assignments

- 1. Visit to a biogas / Bio-engine plant and its report (Energy Capacity assessment).
- 2. Visit to photovoltaic plant for agricultural / Village / Stand-alone applications.
- 3. Economic Analysis of a Renewable Energy system.
- 4. Visit to a Hybrid System & it's assessment system.

Program:	M. Tech. E&TC (VLSI and Embedded Systems)				Semester:	Ι
Course:	Automotive Electronics and its Applications (Open Elective)			Code:	MET1601A	
	Teaching Schen	eaching Scheme Evaluati			ion Scheme	
Lecture	Hours	Credit	IE1	IE2	ETE	Total
2	2	2	20		30	50

Pre-requisite: Knowledge of electronics & electrical, instrumentation, control systems, and IC engine operation, etc.

Objectives:

- 1. To learn and understand the various application of electronics systems and ECU in automotive.
- 2. To learn and understand principles and applications of sensors and actuators in automotive electronics systems.
- 3. To learn and understand various control systems in automotive

Outcomes:

After learning the course, the students should be able to:

- 1. Acquire an overview of automotive components, subsystems, and basics of electronic control in today's automotive industry.
- 2. Use and apply available automotive sensors and actuators in various electronic control systems while designing automotive system design.
- 3. Apply knowledge of modern technologies in automotive design.

Detailed Syllabus:

Unit	Description	Duration
1.	Automotive Systems Overview: Automotive vehicle technology, Present trends in automobiles with emphasis on increasing role of electronics and software, Overview of typical automotive subsystems and components, Body, Chassis, and Powertrain Electronics	6
2.	Sensors and Actuators: Basic sensor arrangement, Types of sensors such as oxygen sensors, Crank angle position sensors, Fuel metering/vehicle speed sensors, Flow sensor, Temperature, EGO, Air mass flow sensors, Throttle position sensor, Solenoids, Stepper Motors, Relays, etc.,	6
3.	Engine Control System: Algorithms for engine control including open loop and closed loop control system, Electronic ignition, EGR for exhaust emission control. Look-up tables and maps, Need of maps, Procedure to generate maps, Engine calibration, Torque table, Dynamometer testing	6
4.	Active and passive safety systems: Body electronics including lighting control, Remote keyless entry, Immobilizers etc., Electronic instrument clusters and dashboard electronics, Antilock braking system, Electronic stability program, Air bags, Computer vision based ADAS	6
	Total	24

Text Books:

- 1. William B. Ribbens, "Understanding Automotive Electronics- An Engineering Perspective", Seventh edition, Butterworth-Heinemann Publications.
- 2. Ronald K. Jurgen, "Automotive Electronics Handbook", Mc-Graw Hill.

- 1. Robert Bosch," Automotive Hand Book", Fifth edition, SAE Publications
- 2. Kiencke, Uwe, Nielsen & Lars, "Automotive Control Systems for Engine, Driveline and Vehicle", Second edition, Springer Publication.
- 3. Automotive Electronics by Tom H. Denton
- 4. Automotive Electrical and Electronic Systems by John F. Kershaw, James D. Halderman / Pearson Education

Program:	M. Tech. E&	TC (VLSI and Emb	edded Systems))	Semester: I	
Course:	Industrial Drives (Open Elective)			Code: ME	ET1601B	
	Teaching Schei	ne	Evaluation Scheme			
Lecture	Hours	Credit	IE1	IE2	ЕТЕ	Total
2	2	2	20		30	50

Pre-requisite:

Electrical Drives, Dynamics of Electrical drives, Control Systems

Objectives:

- 1. To define electric drive, its parts, advantages and explain choice of electric drive.
- 2. To explain dynamics and modes of operation of electric drives.
- 3. To explain selection of motor power ratings and control of dc motor using rectifiers.
- 4. To analyze the performance of induction motor drives under different conditions.
- 5. To explain the control of induction motor, synchronous motor and stepper motor drives.
- 6. To discuss typical applications electrical drives in the industry

Outcomes:

After learning the course, the students should be able to:

- 1. Explain the advantages and choice of electric drive.
- 2. Explain dynamics and different modes of operation of electric drives.
- 3. Suggest a motor for a drive and control of dc motor using controlled rectifiers.
- 4. Analyze the performance of induction motor drives under different conditions.
- 5. Control induction motor, synchronous motor and stepper motor drives.
- 6. Suggest a suitable electrical drive for specific application in the industry

Det	tail	6.0	C-	11.	·h	
Del	lan	eu	.7 V	111	41)	us:

Unit	Description	Duration
1.	Selection of Motor Power Ratings: Thermal Model of Motor for Heating and Cooling, Classes of Motor Duty, Determination of Motor Rating. Direct Current Motor Drives: Controlled Rectifier Fed dc Drives, Single Phase Fully Controlled Rectifier Control of dc Separately Excited Motor, Single Phase Half Controlled Rectifier Control of dc Separately Excited Motor, Three Phase Fully Controlled Rectifier Control of dc Separately Excited Motor, Three Phase Half Controlled Rectifier Control of dc Separately Excited Motor, Multi quadrant Operation of dc Separately Excited Motor Fed Form Fully Controlled Rectifier, Rectifier Control of dc Series Motor, Supply Harmonics, Power Factor and Ripple in Motor Current, Chopper Control of Separately Excited dc Motor, Chopper Control of Series Motor.	6
2.	Induction Motor Drives: Analysis and Performance of Three Phase Induction Motors, Operation with Unbalanced Source Voltage and Single Phasing, Operation with Unbalanced Rotor Impedances, Analysis of Induction Motor Fed from Non-Sinusoidal Voltage Supply, Starting, Braking, Transient Analysis. Speed Control Techniques-Stator Voltage Control, Variable Voltage Frequency Control from Voltage Sources.	6
3.	Voltage Source Inverter (VSI) Control, Cyclo-converter Control, Closed Loop Speed Control and Converter Rating for VSI and Cyclo-converter Induction Motor Drives, Variable Frequency Control from a Current Source, Current Source (CSI) Control, current regulated voltage source inverter control, speed control of single phase induction motors.	6
4.	Synchronous Motor Drives: Operation from fixed frequency supply-starting, synchronous motor. Self-controlled synchronous motor drive employing load commutated thruster inverter, Starting Large Synchronous Machines, Permanent Magnet ac (PMAC) Motor Drives, Sinusoidal PMAC Motor Drives, Brushless dc Motor Drives. Stepper Motor Drives: Variable Reluctance, Permanent Magnet, Important Features of Stepper Motors, Torque Versus Stepping Rate Characteristics, Drive Circuits for Stepper Motor. Industrial Drives: Textile Mills, Steel Rolling Mills, Cranes and Hoists, Machine Tools.	6

Program:	M. Tech. E	&TC (VLSI and E	mbedded Systems) Semester: I				
Course:	Basic of FP	GA and CPLD (Op	en Elective)		Code: MET1601C		
	Teaching Sche	eme	Evaluation Scheme				
Lecture	Hours	Credit	IE1	IE2	ЕТЕ	Total	
2	2	2	20		30	50	

Pre-requisite: Fundamentals of digital electronics, Knowledge of one hardware description language

Objectives:

- 1. To make students familiar with programmable logic devices and its architectures.
- 2. To understand the architecture and features of FPGA and CPLD.
- **3.** To make the students familiar with the design process and how the design is mapped to the existing hardware in FPGA and CPLD.

Outcomes:

After learning the course the students should be able to:

- 1. To understand the depth of CPLD and FPGA architectures.
- 2. To design a system using FPGAs.
- 3. To demonstrate an understanding of interfacing of different external devices with FPGA/CPLD.
- 4. To apply the complete design flow of FPGA and CPLD for the specific application.

Detaile	d Syllabus:	
Unit	Description	Duration
2.	Introduction: Introduction to Hardware Description language, Need of Programmable logic devices, PLA PAL, CPLD, FPGA: General Architecture, features CPLD Architecture: overview, specification and applications, Features of XC9500 series of CPLD family.	6
2.	FPGA Architecture: Xilinx Logic Cell Array, Configurable Logic Block, I/O Block, Programmable Interconnects, Programming methods, Advanced features of Xilinx 4000 series Technology Trends: Device capacity, Utilization and Gate Density, Programming methods, General Design Flow, General Design Guidelines.	6
3.	Interfacing with FPGA/CPLD: The purpose of interfacing, interfacing of external devices such as WiFi Module, Bluetooth Module, GPS Module, Zigbee Module, Different types of display devices with FPGA/CPLD	6
4.	Case Studies-FPGA/CPLD: Xilinx Virtex-6, Spartan-6, Z-board Advanced features in FPGA based on Case studies. Logical Design by FPGA/CPLD: Complete design of any combinational circuit by gates, Boolean Algebra, Design of sequential circuits	6
	Total	24

Text Books:

Program:	M. Tech. E&TC (VLSI and Embedded Systems) Semester: II						
Course:	Drone Prog	gramming for Begin	nners (Open El	ective)	Code: MET2602A		
	Teaching Scheme			Evaluat	ation Scheme		
Lecture	Hours	Credit	IE1	IE2	ЕТЕ	Total	
2	2	2	20		30	50	

Pre-requisite:

- 1. Basic understanding of physics (Force, Velocity, Acceleration, etc)
- 2. Understanding of sensors and actuators, Control systems
- 3. Modelling Basics -MATLB & SIMULINK, Programming in python

Objectives:

- 1. To understand the physics behind drones
- 2. To create the mathematical model of quadcopter drone from simple mathematics & Experimental data
- 3. To implement model into Simulink & check it against real life performance

Outcomes:

After learning the course, the students should be able to:

- 1. Identify & select different accessories of Drones as per applications
- 2. Establish the mathematical model & the Physics behind Quadcopter drone
- 3. Design Simulink model simulating the complete dynamics of quadcopter drone.

Detailed	Syllabus:
Detalled	Synabus:

Unit	Description	Duration (H)
1.	Introduction to drones: Unmanned Aerial Systems (UAS), Basics of drones, Introduction to Drones programming and Development Tools, Current rules and regulations governing owning and operating a UAS, concerns surrounding UAS safety, security and privacy issues	6
2.	Drone accessories and Applications: Sensors, Motors, Propellers, Battery, Concept of propulsion, Forces working on a Flight, Principal axes and rotation of aerial systems, Stable, unstable and neutral systems, Control drone (roll, pitch and yaw), Application of drones.	6
3.	Drone control system development in Simulink: Control system architecture, Quadcopter with actuator & propellers functionality block, Sensing & estimation functionality block, controller functionality block, Motor mixing algorithm (RPYT) functionality block	6
4.	Modelling, Simulation & Flight control design: Dynamic quadcopter system Model, flight control design, 3D visualization, testing & Tuning the model, Flight operations, Applicable software for data collection, processing, and analysis	6
	Total	24

Text books:

- 1. Building your own drones, a beginner's guide to drones, UAVS, and ROVs- John Baichtal
- 2. Quadcopter modelling and control with Matlab/Simulink implementation by Muhammad Usman
- 3. Model based design of a quadcopter by Ryan Gordon
- 4. Robotics control, sensing, vision and intelligence K.S.Fu, R.C.Gonzalez, C.G.Lee

- 1. Robotics and control- R.K.Mittal, I.J.Nagrath
- 2. Drones (The ultimate guide), Ben Rupert, CreateSpace Independent Publishing Platform
- 3. Matlab and Simulink for engineers, Agam Kumar Tyagi, Oxford University Press, 2012

Program:	M. Tech. E&TC (V	LSI and Embedded	Systems)	Semester: II			
Course:	Instrumentation ar	nd Measurements (O _I	pen Elective) Code: MET2602B				
	Teaching Schem	ne	Evaluation Scheme				
Lecture	Hours	Credit	IE1	IE2	ЕТЕ	Total	
2	2	2	20		30	50	

Pre-requisite: Basics of sensors and Actuators, Basic of Electronics, Analog and Digital Systems

Objectives:

To impart knowledge on the following Topics -

- 1. Basic functional elements of instrumentation
- 2. Fundamentals of electrical and electronic instruments
- 3. Comparison between various measurement techniques
- 4. Various storage and display devices
- 5. Various transducers and the data acquisition systems

Outcomes:

After learning the course, the students should be able to:

- 1. Analyse different measuring parameters of any electronics/mechatronics system
- 2. Design and evaluate characteristics of different types of mechatronics/ electrical/ electronic system
- 3. Understand different types of wave/spectrum analyzer.
- 4. Interface various system components and analyse its data using data acquisition system.

Detaile	d Syllabus:	
Unit	Description	Duration
1.	Basics of Measurements: Accuracy, Precision, resolution, reliability, repeatability, validity, Errors and their analysis, Standards of measurement. Bridge Measurement: DC bridges-wheatstone bridge, AC bridges – Kelvin, Hay, Maxwell, Schering and Wien bridges, Wagner ground Connection. Electronic Instruments for Measuring Basic Parameters: Amplified DC meter, AC Voltmeter, True- RMS responding Voltmeter, Electronic multimeter, Digital voltmeter, Vector Voltmeter.	6
2.	Oscilloscopes: Cathode Ray Tube, Vertical and Horizontal Deflection Systems, Delay lines, Probes and Transducers, Specification of an Oscilloscope. Oscilloscope measurement Techniques, Special Oscilloscopes – Storage Oscilloscope, Sampling Oscilloscope. Signal Generators: Sine wave generator, Frequency – Synthesized Signal Generator, Sweep frequency Generator. Pulse and square wave generators. Function Generators.	6
3.	Signal Analysis: Wave Analyzer, Spectrum Analyzer. Frequency Counters: Simple Frequency Counter; Measurement errors; extending frequency range of counters Transducers: Types, Strain Gages, Displacement Transducers	6
4.	Digital Data Acquisition System: Interfacing transducers to Electronics Control and Measuring System. Instrumentation Amplifier, Isolation Amplifier. An Introduction to Computer-Controlled Test Systems.IEEE-488 GPIB Bus	6
	Total	24

Text Books:

- 1. Modern Electronics Instrumentation & Measurement Techniques, by Albert D.Helstrick and William D.Cooper, Pearson Education. Selected portion from Ch.1, 5-13.
- $2. \ Elements \ of \ Electronics \ Instrumentation \ and \ Measurement-3rd \ Edition \ by \ Joshph \ J. Carr. Pearson \ Education. \ Selected \ portion \ from \ Ch.1,2,4,7,8,9,13,14,18,23 \ and \ 25.$

- 1. Electronics Instruments and Instrumentation Technology Anand, PHI
- 2. Doebelin, E.O., Measurement systems, McGraw Hill, Fourth edition, Singapore, 1990.

Course:	Microcontrollers and Microprocessors Applications (Open Elective) Code: MET2602C					2C
Teaching Scheme				Evaluati	on Schei	me
Lecture	Hours	Credit	IE1	IE2	ЕТЕ	Total
2	2	2	20		30	50

Pre-requisite: Digital Electronics

Objectives:

- 1. To understand architecture and features of typical Microcontroller.
- 2. To understand need of microcontrollers in real life applications.
- 3. To learn interfacing of real-world peripheral devices
- **4.** To study various hardware and software tools for developing applications.
- 5. To learn the architecture and programmer's model of advanced processor and microcontroller
- **6.** To acquaint the learner with application instruction set and logic to build assembly language programs.

Outcomes:

After learning the course, the students should be able to:

- 1. Learn importance of microcontroller and microprocessor in designing embedded application
- 2. To apply the programming skills to develop real-life embedded application.
- 3. Learn use of hardware and software tools.
- 4. Develop interfacing to real world devices.

Detaile	d Syllabus:	
Unit	Description	Duration, h
1.	Introduction to single chip Microcontrollers: Intel MCS-51 family features, 8051/8031-architecture, 8051 assembly language programming, addressing modes, Programming interrupts, timers and serial communication	6
2.	Microcontrollers and system design: Assembly vs High-Level language programming, System Development Environment: assembler, compiler and integrated development environment, Debugging and Simulation, system design with 8051.	6
3.	System level interfacing design; Advanced Microprocessor Architectures- 286, 486, Pentium; Introduction to RISC processors; ARM microcontrollers; Embedded system design methodologies, embedded controller design for communication, digital control.	6
4.	Microcontroller & Processors Applications: Interfacing with display devices, Sensors, actuators, and memory devices. Case Study on real time embedded system.	6

2	2	2	20		30	50

Pre-requisite: . Basics of Programming

Objectives:

- 1.To acquire knowledge in Python and R programming
- 2.To develop Python programs with conditionals and loops and data structures
- 3. Acquire skills to apply data analysis methods to a problem

Outcomes:

After learning the course the students should be able to:

- 1.Describe the Numbers, Math functions, Strings, List, Tuples and Dictionaries in Python
- 2.Interpret Object oriented programming in Python
- 3. Apply a solution clearly and accurately in a program using Python.

Detaile	ed Syllabus:	
Unit	Description	Duration
1.	Introduction to Python Programming: Python Introduction, Installing and setting Python environment in Windows and Linux, basics of Python interpreter, Execution of python program, Editor for Python code, syntax, variable, Data types. Flow control if if else, for, while, range() function, continue, pass, break. Strings: Sequence operations, String Methods.	6
2.	Lists: Basic Operations, List slices, list methods, list and strings Dictionaries: looping and dictionaries, dictionaries & lists. Tuples and Files: reading and writing Functions: Definition, Call, Arguments, Input output file handling.	6
3.	Object Oriented Programming features in Python: Classes, Objects, Inheritance, Errors and Exceptions: try, except and else statements, Exception Objects, Regular expressions.	6
4.	Numpy and Matplotlib :Array operations, Numpy Side Effects, 2D Numpy Arrays, Numpy Basic Statistics. Matplotlib: Introduction, Simple plots, Line API, Legend API, Figures, Subplots. Pandas: Look Ups, Selections and Indexing, Filling Methods, Series operation, Handling NaN values, Mapping, Data Frames, Reading Files, Plotting, Joins, Correlation, Histograms, Rolling calculation.	6

2	2	2	20		30	50

Pre-requisite:-

Objectives:

- 1. To learn and understand the principles of Software Engineering
- 2. To be acquainted with methods of capturing, specifying, visualizing and analyzing software requirements.
- 3. To apply Design and Testing principles to S/W project development.
- 4. To understand project management through life cycle of the project.
- 5. To understand software quality attributes.

Outcomes:

After learning the course the students should be able to:

- 1. Decide on a process model for a developing a software project
- Classify software applications and Iden
 Design test cases of a software system. Classify software applications and Identify unique features of various domains
- 4. Understand basics of IT Project management.
- 5. Plan, schedule and execute a project considering the risk management.
- Apply quality attributes in software development life cycle.

Detailed	Syllabus:
WT 14	

Unit	Description	Duration H
1.	Introduction to Software Engineering and Software Process Models: Software Engineering Fundamentals: Nature of Software, Software Engineering Principles, The Software Process, Software Myths. Process Models: A Generic Process Model, Prescriptive Process Models: The Waterfall, Incremental Process(RAD), Evolutionary Process, Unified Process, Concurrent. Advanced Process Models & Tools: Agile software development: Agile methods, Plan-driven and agile development.	6
2.	Software Requirements Engineering and Analysis: Requirements Engineering: User and system requirements, Functional and non-functional requirements, Types & Metrics, A spiral view of the requirements engineering process. Software Requirements Specification (SRS): The software requirements Specification document, The structure of SRS, Ways of writing a SRS, Requirements elicitation & Analysis: Process, Requirements validation, Requirements management.	6
3.	Design Engineering: Design Process & quality, Design Concepts, The design Model, Pattern-based Software Design. Architectural Design :Design Decisions, Views, Patterns, Application Architectures, Modeling Component level Design: component, Designing class based components, conducting component-level design, User Interface Design: The golden rules, Interface Design steps & Analysis, Design Evaluation	6
4.	Project Risk Management: Risk Analysis & Management: Reactive versus Proactive Risk Strategies, Software Risks, Risk Identification, Risk Projection, Risk Refinement, Risk Mitigation, Risks Monitoring and Management, The RMMM plan for case study project	6
	Total	24

Program:	M.Tech (Computer Engineering)				ster : I		
Course:	Basics of Machine Learning (Open Elective)				Code: MCE1601C		
	Teaching Scheme Evaluation Scheme						
Lecture	Hours	Credit	IE1	IE2	ЕТЕ	Total	
2	2	2	20		30	50	

Pre-requisite:

- 1.Linear Algebra, Statistics, Probability and Calculus
- 2. Basic Programming Skills

Objectives:

- 1. To master the concepts of supervised and unsupervised learning, recommendation engine, and time series modeling
- 2. To gain practical knowledge over principles, algorithms, and applications of Machine Learning through a handson approach and to validate Machine Learning models and decode various accuracy metrics. Improve the final models using another set of optimization algorithms, which include Boosting & Bagging techniques
- 3. To acquire thorough knowledge of the statistical and heuristic aspects of Machine Learning and To comprehend the theoretical concepts and how they relate to the practical aspects of Machine Learning.
- 4. 4.To implement models such as support vector machines, kernel SVM, naive Bayes, decision tree classifier, random forest classifier, logistic regression, K-means clustering

Outcomes:

After learning the course the students should be able to:

- 1. Understand machine learning techniques and computing environment that are suitable for the applications under consideration.
- 2. Solve problems associated with batch learning and online learning, and the big data characteristics such as high dimensionality, dynamically growing data and in particular scalability issues.
- 3. Develop scaling up machine learning techniques and associated computing techniques and technologies for various applications.
- 4. Implement various ways of selecting suitable model parameters for different machine learning techniques.

Detailed	l Syllabus:	
Unit	Description	Duration, h
1.	Foundations for Machine Learning [ML]: ML Techniques overview: Supervised; Unsupervised, Reinforcement Learning, Validation Techniques (Cross-Validations); Feature Reduction/Dimensionality reduction; Principal components analysis (Eigen values, Eigen vectors, Orthogonality)	6
2.	Clustering: Distance measures; Different clustering methods (Distance, Density, Hierarchical); Iterative distance-based clustering; Dealing with continuous, categorical values in K-Means; Constructing a hierarchical cluster; K-Medoids, k-Mode and density-based clustering; Measures of quality of clustering	6
3.	Classification: Naïve Bayes Classifier Model Assumptions; Probability estimation; Required data processing; M-estimates;, Feature selection: Mutual information; Classifier K-Nearest Neighbors: K-Nearest Neighbor algorithm; Aspects to consider while designing K-Nearest Neighbor Support Vector Machines; SVM for classification and regression problems.	6
4.	Association Rule mining: The applications of Association Rule Mining: Market Basket, Recommendation Engines, etc.; A mathematical model for association analysis; Large item sets; Association Rules; Apriori: Constructs large item sets with mini sup by iterations; Interestingness of discovered association rules; Application examples; Association analysis vs. classification; FP-trees Research Aspects: Application of ML in various domains-Research Paper Publication in Quality Indexed International Journals/ Conferences; Practical Implementation of Industry Projects/Applications; IPR	6
	Total	24

Text Books:

- 1. T. Hastie, R. Tibshirani, J. Friedman. The Elements of Statistical Learning, 2e, 2008.
- 2. Christopher Bishop. Pattern Recognition and Machine Learning. 2e.

Reference Books:

Program:	M.Tech (Computer Engineering)			Semester	Semester : II		
Course:	Image Processing with MATLAB (Open Elective)				Code: MCE2602A		
				Evolue	tion Cohomo		
	Teaching Scheme			Evaluation Scheme			
Lecture	Hours	Credit	IE1 IE2 ETE Total				
2	2	2	20		30	50	

Pre-requisite: Programming Basics

Objectives:

- 1. Develop an overview of the field of image processing.
- 2. Cover the basic theory and algorithms that are widely used in digital image processing.
- 3. Develop hands-on experience in using computers to process images.
- 4. Familiarize with MATLAB Image Processing Toolbox Course

Outcomes:

After learning the course the students should be able to:

- 1: Understand the need for image transforms different types of image transforms and their properties.
- 2: Learn different techniques employed for the enhancement of images.
- 3: Understand the need for image compression and to learn the spatial and frequency domain techniques of image compression.
- 4: Learn different feature extraction techniques for image analysis and recognition.
- 5: Develop any image processing application.

Detaile	d Syllabus:	
Unit	Description	Duration h
2.	Introduction: What is image processing?, What are the fundamental issues?, What is the role of perception? Image sampling and quantization, Basic relationship between pixels, MATLAB orientations. Image Transformations Discrete Fourier transform, Properties of 2D DFT, FFT, Convolution, Correlation, Discrete cosine transform, Discrete Wavelet transform.	6
2.	Image Enhancement Techniques Spatial Domain Techniques: Basic gray level transformations, Histogram processing, Image subtraction, Image averaging, Spatial filtering, Smoothing filters, Sharpening filters. Frequency Domain Techniques: Frequency domain filtering, Image smoothing and Image sharpening using frequency domain filters.	6
3.	Color image processing: Color fundamentals, Color models, Color transformation, Smoothing and Sharpening Image Compression: Fundamentals, Encoder-Decoder model, Types of redundancies, Lossy and Lossless compression, Huffman coding, Arithmetic coding, Golomb coding, LZW coding, Block transform coding, Run-length coding, JPEG Lossless predictive coding, Lossy predictive coding, Wavelet coding.	6
4.	Morphological Image processing: Basics, Erosion, Dilation, Opening, Closing, Hit-or-Miss transform, Boundary Detection, Hole filling, Connected components, Convex hull, Thinning, Thickening, Skeletons, Pruning. Image Segmentation and Representation: Point, Line and Edge detection, Edge linking and Boundary detection, Thresholding, Basic global tresholding, Otsu's method, Region based segmentation, Use of motion in segmentation	6
	Total	24

Program:	M.Tech (Computer Engineering)			Semester : II		
Course:	Linux Essentials (Open Elective)			Code: MCE2602B		
	Teaching Scheme			Evaluation Scheme		
Lecture	Hours	Credit	IE1	IE2	ЕТЕ	Total
2	2	2	20		30	50

Pre-requisite:

Objectives:

- 1.To acquire knowledge of basic Linux OS, commands, and terminologies
- 2.To develop programs using Shell scripting
- 3. To acquire skills related to Linux file system

Outcomes:

After learning the course the students should be able to:

- 1. 1.Use common and simple Linux commands
- Demonstrate programming ability using Unix Shell
 3. Develop collaboratively using GIT and write research-papers using LaTex
- 4. Apply a solution clearly and accurately in Linux environment

Unit Description	Duration h
3. Introduction to Linux:Linux introduction; Understanding philosophy of Linux; Understanding Software Licensing and Linux Distributions; Architecture of Linux OS; Installation of Linux OS (direct and using virtual machine); Using common Linux programs: Linux desktop environment, working with different productivity software; Understanding and managing hardware: CPU, Disk issues, Device drivers, Display etc.;	6
Basic Commands and Shell Scripting: Introduction to Linux commands, concept of shell, shell variables,getcwd() and pwd; Introduction to shell programming features: Variables declaration & scope,test, return value of a program, if-else and useful examples, for and while loop, switch case; Shell functions, pipe and redirection, wildcards, escape characters; Awk script: Environment andworkflow, syntax, variables, operators, regular expressions, arrays, control flows, loops,functions, output redirections	6
3. Linux File System and Networking: File System - Manipulating Files: creating, deleting, copying, moving, renamingetc; Using absolute and relative path; Manipulating Directories: Creating, Deleting and Managing; Basic File and Directory commands; Understanding Linux file system; Networking - Understanding network features; Configuring a network connection; Testing a network connection;	6
4. Essential System Administration Users and Group Management: Users and Group management: Creation, Updating, Deletion of user and group; Commands –shadow, useradd, usermod, userdel, groupadd, groupmod, groupdeletc; Managing ownership and permission. Process and PackageManagement: Understanding package management,package management commands like rpm, yum, apt; Understanding Process hierarchy and identifying running processes; Log files. Or Introduction to GIT and LaTEX: LaTEX:Basic syntax, compiling and creating documents; Document structure including sections and paragraphs; Adding Images, Table ofcontents, Source code, graphs; Adding references, and Bibliography; Installation and Hands-on of LaTEX. GIT: Creating a project using GIT locally, add, commit; Branch and Merge; Cloning a remote repo, working with a remote repo; Working on a project in a distributed fashion; Hands-on of GIT.	6

Program:	M.Tech (Comp)	Semester : II				
Course:	Design with UM	Design with UML (Open Elective)			Code: MCE2602C		
	Teaching Schem	e	Evaluation Scheme				
Lecture	Hours	Credit	IE1 IE2 ETE Total				
2	2	2	20		30	50	

Pre-requisite:

.Basic understanding of computer programming and related programming paradigms.

Objectives:

- 5. To introduce the concept of Object-oriented design
- 6. To understand and differentiate Unified Process from other approaches
- 7. To design static and dynamic UML diagrams

Outcomes:

After learning the course the students should be able to:

- 1. Understand Basic features and elements of the object-oriented approach
- 2. Identify, analyse, and model structural and behavioural concepts of the system.
- 3. Apply the concepts of architectural design for deploying the code for software.

Detaile	d Syllabus:	
Unit	Description	Duration, (H)
4.	Introduction to UML: Importance of modeling, principles of modeling, object-oriented modeling, conceptual model of the UML, Architecture, Software Development Life Cycle	6
2.	Basic Structural Modeling: Classes, Relationships, common Mechanisms, and diagrams. Advanced Structural Modeling: Advanced classes, advanced relationships, Interfaces, Types and Roles, Packages. Class & Object Diagrams	6
3.	Basic and Advanced Behavioral Modeling: Interactions, Interaction diagrams. Use cases, Use case Diagrams, Activity Diagrams. Advanced Behavioral Modeling Events and signals, state machines, processes and Threads, time and space, state chart diagrams.	6
4.	Architectural Modeling: Component, Deployment, Component diagrams and Deployment diagrams. Common modeling techniques	6
	Total	24

- 5. Joseph Schmuilers Teach Yourself UML in 24 Hours. Sams publishing.

Program:	M. Tech. Civil	(Construction	Management)	Se	emester : I	
Course:	Project Management and Finance (Open Elective)			lective) C	ode: MCl	[1601A
Teaching Scheme Ev			Evaluation Scheme			
Lecture	Hours	Credit	IE1	IE2	ЕТЕ	Total
2	2	2	20		30	50

Pre-requisite:

Basics of Management, Basics of Finance

Objectives: After Completing this course, student will have adequate background to understand and solve the problem involving:

- 1. Outline the principles followed in carrying out a project.
- 2. To demonstrate knowledge and understanding of engineering and management principles.
- 3. To function effectively as an individual, and as a member or leader in diverse teams.
- 4. To apply the concepts of finance and accounts carried out in project management

Outcomes: After learning the course, the students should be able to:

- 1. Access current market trends and choose projects.
- 2. Prepare project feasibility reports.
- 3. Ability to implement the project effectively meeting government norms and conditions.
- 4. Ability to select projects which benefit the society and organization.

Detailed Syllabus:

Unit	Description	Duration, h
1.	Introduction to Management What is Management? It's Need ,Importance & Purpose, Evolution of Managements thought,	6
	Different Schools/ approaches to Management: Behavioral, Quantitative, Systems, Contingency Approach	
2.	Project Implementation, Monitoring and Control Project representation: Role of project managers, relevance with objective of organization, preliminary manipulations, Basic Scheduling concepts: Resource levelling, Resource allocation, Setting a base line, Project management information system: Importance of contracts in projects: Team work in Project Management: Formation of Effective terms.	6
3.	Organizing Organizing as a Management process, Principles of Organization, Different Structures of organizations such as line, Line & Staff, Functional, Matrix or project Organization: Characteristics, Features, their Merits and Limitation, Ownerships of Organization: Sole Proprietorship, Partnership, Private Ltd., Public Ltd., Introduction to Organizational climate, Decision Making, Group Decision Making, Staffing: What is Staffing? Steps involved in Staffing, Recruitment, Staffing, Performance Appraisal Development	6
4.	Financial Statements And Their Analysis Understanding of Financial Statements and Their Analysis, Like Balance Sheet, Profit & Loss Account, Ratio Analysis, Fund Flow Analysis, Statement of Changes In Financial Position.	6
	Total	24

Lab Experiments / Assignments:

- 1. Assignment based on Need, Importance & Purpose of management.
- 2. Assignment based on Project Implementation, Monitoring and Control.
- 3. Assignment based on Management process, Principles of Organization.
- 4. Assignment based on Financial Statements and Their Analysis, Like Balance Sheet, Profit & Loss Account Ratio Analysis, Fund Flow Analysis.

Text Books:

Due megnicites I	Institution manufal at	udu Tumas af s	Due nonvicites Environmental study. Types of pollution				

Pre-requisite: Environmental study, Types of pollution

Objectives: After Completing this course, student will have adequate background to:-

- 1. Evaluate Global warming and its effect
- 2. Demonstrate knowledge in the reduction of global warming.
- 3. Apply control measures of carbon emission and accumulation.
- 4. Apply high tech measures for Reducing Carbon Emissions.

Outcomes: After learning the course, the students should be able to:

- 1. Analyse effects of Global warming
- 2. Implement the concept of reduction of global warming
- 3. Apply remedial action for the carbon emission and accumulation.
- 4. Apply high tech measures for Reducing Carbon Emissions.

Deta	hali	SvII	lahus	
17612	mea	- N V II	IADUS	-

Unit	Description	Duration, h
1.	Global Warming and its effect:- Introduction and physical definition of global warming, the New Carbon Problem: Accumulation, Long Half-Life, Heating Potential, Carbon Emission Factors, Carbon Absorption in Nature, The Global Emission Situation and its effect in India, The Kyoto and Other Protocols and its view in India, Effect of climate change and its impact. Planning for the Future to reduce global warming:- Steps taken to Control Carbon Emissions universally, Use of Promotional and Punitive Mechanisms for Reducing Carbon in Atmosphere, The General Approach in Planning for the Future, Developing Countrywide Adaptive Measures for Safety of Local People, Developing Mitigative Measures for Global Reduction of Carbon, India's National Action Plan on Climate Change (NAPCC) till date, National Mission for a Green India, The MRV Debate.	6
2.	Opportunities in Control of Carbon Emissions and Accumulation: - Essential Steps for Control of Carbon Emissions and Accumulation, Procedure to develop own Priorities and Business Opportunities in India for control of carbon emissions and accumulation, Needs a Mix of Green and Traditional Power Sources in India, A Logical Approach for Carbon Reduction, Need in India — More Forests, Less Deforestation and payment rates procedure for controlling carbon emissions and its Promotional Mechanisms at India. Green Technologies for Energy Production: - Various Technologies Available for Energy Production, Cost Comparison of a Few Typical Systems for Power Generation, Sources of Energy Production Already in Use, Alternative Methods Ready for Use, Green Technologies Needing some Prior R&D Work.	6
3.	Green Technologies for Personal and Citywide Application: Measures to be taken for Green city, Carbon Emission Reduction at Personal Level, Carbon Emission Reduction at Local Authority and Citywide Level, Carbon Emissions from Imports. Green Technologies for Specific Applications: Promotion of 'Green' Buildings, Guidelines, The Energy Conservation Building Code (ECBC), Green Hotels and Hospitals, Green Technologies for Transport, Green Roads, Ports and Harbors, Industries, Carbon, Carbon Emissions from a Few Selected Industries in India, The Changing Scenario in Cities, Need for Wider Application to Town Planning and Area Re-Development Projects ,'Green' Infrastructure for Municipal Services, Bringing up Indian Villages, Green Services for Crematoria, Spreading Message to all Stakeholders.	6
4.	Some High-tech Measures for Reducing Carbon Emissions: Use of Solar Power with Satellite-Based Systems, Use of Carbon Capture and Storage (Sequestration), Microorganisms, A Quick SWOT Analysis. Recommended Plan of Action: India's National Action Plan Take Us to a Low-Carbon Path, The Missions Help Develop Awareness, Few case studies on Projects undertaken by Various Countries, Adaptive Measures Essential for Indian People to Cope with Climate Change	6
	Total	24

Assignments:

- 1. Assignment based on Global Warming and its effect and reduction measures.
- 2. Assignment based on Control of Carbon Emissions and Accumulation
- 3. Assignment based on Applications of green technologies.
- 4. Assignment based on High-tech measure for carbon emission reduction/ action plan

Text Books:

1. Green Technologies, Soli J. Arceivala, Mc Graw Hill Education.

- 1. Green Technologies and Environmental Sustainability edited by Ritu Singh, Sanjeev Kumar
- 2. http://cpcbenvis.nic.in/greentechnology.html

Program:	M. T	ech. Civil (Construction	Management) Semester : II				
Course:	Contract Tendering and Arbitration (Open Elective)			Code: M	CI2602A		
	Teaching	Scheme		Evalu	ation Scheme		
Lecture	Hours	Credit	IE1 IE2 ETE Total				
2	2	2	20		30	50	

Pre-requisite:

Objectives:

- 1. To equipped with knowledge of contracts system.
- 2. To study principles and specifications for making tender documents
- 3. To learn basic principles of Arbitration in the context of various construction aspects.

Outcomes:

After learning the course, the students should be able to:

- 1. Adopting the ethical knowledge for making construction contracts & Tenders.
- 2. Prepare Tendering documents as per conditions of contract.
- 3. Exhibit concept of Arbitration to resolution of disputes in construction projects.

Detailed Syllabus:

Unit	Description	Duration
1.	Construction Contracts: Indian Contract Act (1872): Definition of the contract as per the ACT. Valid, Voidable, Void contracts, Objectives of the act. Introduction: To law, Indian legal system, Laws governing structure & Working of Construction Organization Firms, Laws of Tort.	6
2.	Construction Contract Documents: Evaluation of contract documents, need for documents, present stage of national and international contract documents, types of construction contracts, roles and functions of parties to the contract. Contract Formation.	6
3.	Stages in Contracting: Preparation of tender documents estimating, pre - qualification, bid evaluation, award of contract, Project financing and contract payments, contracts close out and completion.	6
4.	Arbitration: Comparison of Actions and Laws - Agreements , subject matter-Violations-Appointment of Arbitrators-Conditions of Arbitrations-Powers and duties of	6
	Total	24

Text Books:

- 1. Civil Engineering Contracts and Estimates B.S.Patil Universities Press- 2006 Edition, reprinted in 2009.
- 2. The Indian Contract Act (9 of 1872), 1872- Bare Act- 2006 edition, Professional Book Publishers.
- 3. The Arbitration and Conciliation Act, (1996), 1996 (26 of 1996) 2006 Edition, Professional Book Publisher.

Reference Books:

- 1. Law of contract Part I and Part II, Dr. R.K. Bangia- 2005 Edition, Allahabad Law Agency.
- 2. Arbitration, Conciliation and Alternative Dispute Resolution Systems- Dr. S.R. Myneni-2004 Edition, reprinted in 2005- Asia Law House Publishers.
- 3. The Workmen's Compensation Act, 1923 (8 of 1923) Bare Act- 2005- Professional Book Publishers.
- 4. Standard General Conditions for Domestic Contracts- 2001 Ministry Of Statistics and Program Implementation, Government of India. FIDIC Document (1999).
- 5. Dispute Resolution Board foundation manual-www.drbf.org. 30 Edition

List of Assignments:

Theory assignments on:

- 1. Preparation of conditions of Contract related to time of completion, delay, Defects in construction work.
- 2. Tender form submission and necessary Tender Documents.
- 3. Procedure of Bid Opening

Program:	M. Tech. Civil (Construction Management)				er : II	
Course:	Total Quality Management (Open Elective)			Code:	MCI2602B	
Teaching Scheme			Evaluation Scheme			
Lecture	Hours	Credit	IE1 IE2 ETE Total			
2	2	2	20		30	50

Pre-requisite: TQM & MIS at UG Level, Awareness of Quality Construction Aspects

Objectives:

- 1. To understand the need of QM in construction and apply necessary tools to achieve
- 2. To **apply** necessary trainings for the effective utilization of resources
- 3. To apply effectively the eight principles of ISO for quality processes in construction
- 4. To apply Six Sigma tool for TQM in construction project

Outcomes:

After learning the course, the engineers should be able to:

- 1. Understand and apply the TQM phylosophy in construction
- 2. Able to use effectively QC tools.
- 3. Apply ISO principles for effective Quality processes in construction
- 4. Able to apply Six Sigma effectively.

Unit	Syllabus: Description	Duration, h
1.	Concepts of Quality A) Definition of quality as given by Deming, Juran, Crosby, difference between Quality control, Quality Assurance (QA/QC). Total quality control (TQC) and Total Quality Management (TQM), Need for TQM in construction industry. Organization necessary for implementation of quality, Quality manual-Contents, data required, preparation, responsibility matrix, monitoring for quality-PDCA Cycle. Quality aspects in every phase in the life cycle of Construction project.	6
2.	Quality Control Tools Histogram, Pareto diagram, Fish-bone diagram, Quality control chart-Testing required for quality control of construction material used in RCC Work- destructive and Non destructive Test (NDT). Statistical Quality Control-Necessity, Benchmarking.	6
3.	Study of ISO 9004- Quality System Standards. Purpose of ISO Standards. Difference between ISO 9001 and ISO 9004. Certification process for ISO 9001. Certification bodies involved. Eight Principles of ISO-Basic meaning, applying these principles for an effective quality process in the organization. Management support and commitment necessary for achieving implementation for quality system standards. Development of quality circles, quality inspection team, inspection reports, monitoring and control, 360' feedback for quality.	6
4.	A) Six Sigma Definition of six sigma, evolution – Historical aspects, probability distribution Six sigma ratings, Six sigma training, six sigma as an effective tool in TQM. B) Application of Six Sigma i) RCC Work in building (ii) Assessment of overall construction process from concept to completion of a construction project.	6
	Total	24

Text Books:

List of Experiments/ Assignments:

- 1. One Assignment on Each Unit
- 2. Activity: Posters / Flex / Flow Charts / Presentation etc. Per students on any one Topic of the Syllabus 3. Quality Circle Team for Problem Solving.

Program:	M. Tech. (Civil Engineering)				Semester : II		
Course:	Course: Operation Research (Open Elective)				Code: MCI2602C		
Teaching Scheme				Evalu	ation Scheme		
Lecture	Hours	Credit	IE1	IE2	ЕТЕ	Total	
2	2	2	20		30	50	

Pre-requisite:

- 1. Applied Mathematics Including Calculus and Linear Algebra.
- 2. Calculus-Based Probability/Statistics

Objectives:

This course aims at enabling students,

- 1. To familiarize with concepts and techniques of Linear and Nonlinear Programming Problems.
- 2. To derive feasible and optimal solution for Transportation and Assignment Problem.
- 3. To apply various methods to select and execute various optimal strategies using decision theory.
- 4. To construct network diagrams with single and three time estimates of activities involved in the project.

Outcomes:

After learning the course, the students should be able to:

- 1. Model and solve Linear and Nonlinear Programming Problems.
- 2. Model & Solve profit maximization Transportation and Assignment Problem.
- 3. Apply various methods to select and execute various optimal strategies using decision theory.
- 4. Calculate Project schedule and expected completion time for the project.

Detailed Syllabus:

Unit	Description	Duration, h
1.	Introduction to Operations Research Introduction, operations research approach to problem solving, Models and Modelling in operations research, Advantages, Methods for solving operations research models, Methodology of operations research, Advantages. Linear Programming Introduction, Structure of Linear programming Model, Advantages, Limitations, Assumptions and Applications of Linear programming, Guidelines for Model Formulation, Solving Linear programming problems using Graphical Method and Simplex Method	6
2.	Transportation and Assignment Problems Mathematical Models of Transportation Problem, The Transportation Algorithm, Methods for Finding Initial Solution, Test for Optimality. Mathematical Models of Assignment Problem, Solution Methods of Assignment Problem.	6
3.	Decision Theory and Games Theory Steps of Decision-Making Process, Types of Decision-Making Environment, Decision Making Under Uncertainty, Games Theory: Introduction, Two Person Zero Sum Games, Pure Strategies (Minimax and Maximin Principles): Games with Saddle Point, Mixed Strategies: Games without Saddle Point, The Rules of Dominance, Solution Methods of Games without Saddle Point.	6
4.	Project Management Introduction, Basic Difference between PERT and CPM, Phases of Project Management, PERT/CPM Network Components and Precedence Relationships, Critical Path Analysis. Project scheduling with uncertain activity times, Estimation of project completion time.	6
	Total	24

Program:	M. Tech. (Information Technology)				emester : I		
Course:	Business Analytics (Open Elective)			Code	: I	MEIT1601A	
Teaching Scheme			Evaluation Scheme				
Lecture	Hours	Credit	IE1	IE2	ЕТЕ	Total	
2	2	2	20	-	30	50	

Pre-requisite:

- 1. Machine Learning
- 2. Data Science

Objectives:

- 1. Understand the different basic concept / fundamentals of business statistics
- 2. Understand the concept of Probability and its usage in various business applications.
- 3. Understand the practical application of Descriptive and Inferential Statistics concepts and their uses for Business Analytics.
- 4. Evaluate different data analytics tools.

Outcomes:

After learning the course, the students should be able to:

- 1. Gaining Knowledge of basic concept / fundamentals of business analytics.
- 2. Evaluating basic concepts of probability and perform probability theoretical distributions.
- 3. To perform practical application by taking managerial decision and evaluating the Concept of Business Analytics.
- 4. Evaluate different tools.

Detailed Syllabus:

Unit	Description	Duration, h
1.	UNIT – I: Introduction What is business analytics?, Business Analytics process: problem framing, Data modeling, model building, Deployment, Different types of business analytics, application of business analytics, current trends, roles within data analytics team.	6
2.	UNIT - II: Analytics Techniques Optimization techniques: Linear Programming, Goal Programming, Integer Programming, Non –linear programming, Predictive modeling: regression, multiple linear regression for predictive analysis, logistic regression, linear discriminant analysis, Data Mining: Introduction to supervised and unsupervised learning, clustering	6
3.	UNIT III: Probability Theory & Distribution Probability: Theory of Probability, Addition and Multiplication Law, Baye's Theorem Probability Theoretical Distributions: Concept and application of Binomial; Poisson and Normal distributions. Concept of Business Analytics- Meaning types and application of Business Analytics, Use of Spread Sheet to analyze data-Descriptive analytics and Predictive analytics	6
4.	UNIT IV: Data analytics tools Data Visualization using Tableau/Python/R/SQL. Case study.	6
	Total	24

Text Books

Pre-requisite:

- 1. Knowledge of Statistics in Mathematics
- 2. Prior Knowledge of any programming

Objectives:

- 1. To use R and R Studio Environment
- 2. To understand different data types and control structures in R
- 3. To interface R with other languages.
- 4. To understand the use of R for Big Data analytics.

Outcomes:

After learning the course, the students should be able to:

- 1. Understand the basics in R programming in terms of constructs, control statements, string functions.
- 2. Apply the use of R for Big Data analytics.
- 3. Learn to apply R programming for Text processing.
- 4. Able to appreciate and apply the R programming from a statistical perspective.

Unit	Description	Duration, h
1.	UNIT – I: Getting Started with R Programming Introduction to the R-Studio, user-interface, Basic commands, Data Structures in R, Reading data into R, Subsetting	6
2.	UNIT - II: Matrices, Arrays And Lists Creating matrices ,Matrix operations ,Applying Functions to Matrix Rows and Columns, Adding and deleting rows and columns, Vector/Matrix Distinction, Avoiding Dimension Reduction, Higher Dimensional arrays, Lists, Creating lists, General list operations,— Accessing list components and values, Applying functions to lists, Recursive lists	6
3.	UNIT III: Data Frames Creating Data Frames, Matrix-like operations in frames, Merging Data Frames, Applying functions to Data frames, Factors and Tables: factors and levels, Common functions used with factors, Working with tables, Other factors and table related functions, Control statements: Arithmetic and Boolean operators and values, Default values for arguments, Returning Boolean values, Environment and Scope issues: Writing Upstairs - Recursion, Replacement functions, Tools for composing function code, Math and Simulations in R	6
4.	UNIT IV: Interfacing Interfacing R to other languages, Parallel R, Basic Statistics, Linear Model, Generalized Linear models, Non-linear models, Time Series and Auto-correlation – Clustering	6
	Total	24

Text Books:

- 1. Mark Gardener, "Beginning R The Statistical Programming Language", Wiley, 2013
- 2. Norman Matloff, "The Art of R Programming: A Tour of Statistical Software Design", No Starch Press, 2011

- 1. Jared P. Lander, "R for Everyone: Advanced Analytics and Graphics", Addison-Wesley Data & Analytics Series, 2013
- 2. Robert Knell, "Introductory R: A Beginner's Guide to Data Visualization, Statistical Analysis and Programming in R", Amazon Digital South Asia Services Inc, 2013.

Program:	ogram: M. Tech. (Information Technology)				Seme	ster: 1	
Course:	Cost Management of Engineering Project (Open Elective)				Code	: 1	MEIT1601C
Teaching Scheme			Evaluation Scheme				
Lecture	Hours	Credit	IE1	IE	2	ЕТЕ	Total
2	2	2	20	-		30	50

Pre-requisite:

- 1. Software Engineering
- 2. Project Management

Objectives:

- 1. To provide the parties concerned with a most favorable financial outcome to the project.
- 2. Identifying "best value" project option selection and developing realistic budgets.

Outcomes:

After learning the course, the students should be able to:

1. Prepare favorable financial outcome to the project.

Detaile		
Unit	Description	Duration, h
1.	Introduction and Purpose of Project Cost Management Client, Engineering consultant supporting Client in Development Phase, Engineering (Managing) Contractor carrying out EPCM role for project implementation, Consultant acting as PMC for Client, Material Suppliers, Construction / Service Contractors, External Finance Provider	6
2.	Core Project Cost Management Issues Project Concept & Feasibility, Project Development & Definition, Project Implementation, Project Commissioning & Financial Close out	6
3.	Estimating and Project Financing Estimate Categories, Estimate Quality, Project Schedule influence on estimated cost, Estimate Scope, Study / Development Estimates, Estimates for provision of advanced funding, Estimate quality required for project authorization, Estimating techniques, Location factors, Escalation ,Currency fluctuations, Contingency, Cash flow Project Financing: Internal financing, Financing of project development works, External financing, Banks & Venture Funds, Government grants and loans, Contractors, Suppliers, Customers	6
4.	Vulnerable Projects Mega-projects (Projects with value >€2Bn), Retrofit projects (Modifications and extensions to existing facilities), New Technology projects, Sub-surface works, Projects in emerging markets (e.g. E Europe, Asia), Projects in remote locations, Projects requiring significant regulatory validation (e.g. Pharmaceutical, Nuclear), Contaminated Demolition, Fast Track Projects	6
	Total	24

Text Books:

Kenneth K. Humphreys, Lloyd M. English, "Project and cost engineer's handbook", third edition, Ace International, Marcel Dekkar Inc., New York Basel.

Reference Books:

Kenneth K. Humphreys, Lloyd M. English, "Project and cost engineer's handbook", third edition, Ace International, Marcel Dekkar Inc., New York Basel.

Program:	Program: M. Tech. (Information Technology)				ester:	П
Course:	Course: Cryptography (Open Elective)				e:]	MEIT2602A
Teaching Scheme				Evaluati	on Scheme	
Lecture	Hours	Credit	IE1	IE2	ЕТЕ	Total
2	2	1	20	-	30	50

Pre-requisite:

- 1. Basic Mathematics
- 2. Basic Computer Network.
- 1. To understand computer, network and information security.
- 2. To study operating system security and malwares.
- 3. To study security issues in internet protocols.
- 4. To study network defense tools.

Outcomes:

After learning the course, the students should be able to:

- 1. Understand modern concepts related to cryptography and cryptanalysis
- 2. Analyze and use methods for cryptography and reflect about limits and applicability of these methods
- 3. Learn details and design philosophy of modern symmetric and public key systems
- 4. Learn uses and limitations of the various categories of cryptographic algorithms

Detaile	Detailed Syllabus:					
Unit	Description	Duration, h				
1.	UNIT – I: Introduction: Computer Security Concepts, Terminology, OSI Security Architecture, Elements Of Information Security, Security Policy, Types of Security attacks, Security Goals and services, Modular Arithmetic, GCD, Euclidean Algorithm, Fermat's Little Theorem, Euler Totient Function, Extended Euclidean Algorithm, Chinese Remainder Theorem.	6				
2.	UNIT – II: Classical Encryption Techniques: Symmetric Cipher Model, Encryption Methods, Classical Encryption Techniques, Substitution Ciphers, Transposition Ciphers, one-time pad, Cryptanalysis, Block Ciphers, Stream Ciphers	6				
3.	UNIT III: Private-key Encryption: Block Cipher Principles, Data Encryption Standard (DES), Triple DES, Advanced Encryption Standard (AES), RC5, International Data Encryption Algorithm (IDEA), Differential and Linear cryptanalysis	6				
4.	UNIT IV: Public-key cryptosystems: Public-Key Cryptography, Key Management, Key Distribution, RSA, Timing Attack, Diffie Hellman Key Exchange, Elliptic Curve Arithmetic, Elliptic Curve Cryptography [ECC]	6				
	Total	24				

Text Books:

- 1. William Stallings, Computer Security: Principles and Practices, Pearson 6th Ed, ISBN: 978-0-13-335469-0

2	2	1	20	-		30	50

Pre-requisite:

- 1. Operating Systems
- 2. Fundamentals of Computer Networks.

Objectives:

- 1. To become familiar with Cloud Computing and its ecosystem.
- 2. To learn basics of virtualization and its importance.
- 3. To give technical overview of Cloud Programming and Services.
- 4. To understand security issues in cloud computing.

Outcomes:

After learning the course, the students should be able to:

- 1. To understand the need of Cloud based solutions.
- 2. To understand Security Mechanisms and issues in various Cloud Applications
- 3. To explore effective techniques to program Cloud Systems.
- 4. To understand current challenges and trade-offs in Cloud Computing..

Dataila	J Callahara	
Unit	d Syllabus: Description	Duration, h
Cint	UNIT – I: Fundamentals of cloud computing: Origins and Influences, Basic Concepts and Terminology, Goals and Benefits, Risks and Challenges, Roles and Boundaries, Cloud Characteristics, Cloud Delivery Models, Cloud	6
1.	Deployment Models, Federated Cloud/Intercloud, Types of Clouds. Cloud-Enabling Technology: Broadband Networks and Internet Architecture, Data Center Technology, Virtualization Technology, Web Technology, Multitenant Technology, Service Technology.	0
2.	UNIT – II: Virtualization and common standards in cloud computing: Implementation Levels of Virtualization, Virtualization Structures/Tools and Mechanisms, Types of Hypervisors, Virtualization of CPU, Memory, and I/O Devices, Virtual Clusters and Resource Management, Virtualization for Data-Center Automation. Common Standards: The Open Cloud Consortium, Open Virtualization Format, Standards for Application Developers: Browsers (Ajax), Data (XML, JSON), Solution Stacks (LAMP and LAPP),Syndication (Atom, Atom Publishing Protocol, and RSS), Standards for Security	6
3.	UNIT III: Cloud programming, environments and applications: : Features of Cloud and Grid Platforms, Programming Support of Google App Engine, Programming on Amazon AWS and Microsoft Azure, Emerging Cloud Software Environments, Understanding Core OpenStack Ecosystem. Applications: Moving application to cloud, Microsoft Cloud Services, Google Cloud Applications, Amazon Cloud Services, Cloud Applications (Social Networking, E-mail, Office Services, Google Apps, Customer Relationship Management).	6
4.	UNIT IV: Cloud security and issues: Basic Terms and Concepts, Threat Agents, Cloud Security Threats and Attacks, Additional Considerations, Cloud Security Mechanisms: Encryption, Hashing, Digital Signature, Public Key Infrastructure (PKI), Identity and Access Management (IAM), Single Sign-On (SSO), Hardened Virtual Server Images. Cloud Issues: Stability, Partner Quality, Longevity, Business Continuity, Service-Level Agreements, Agreeing on the Service of Clouds, Solving Problems, Quality of Service, Regulatory Issues and Accountability.	6

Pre-requisite:

- 1. Basic of Cryptography
- 2. Basic of Information and Cyber security.

Objectives:

- 1. To understand the basic concepts behind Cryptography and Crypto currency.
- 2. To understand the different Consensus approaches for Bit coin.
- 3. To understand the concepts of blockchain technology.
- 4. To understand the Mechanics of bit coin.

Outcomes:

After learning the course, the students should be able to:

- 1. Apply Cryptography concepts to Currency (real time) problem solving.
- 2. Learn and apply different consensus mechanisms for real time projects based on digital currency.
- 3. Analyze block chain model come from a different case studies.

Detaile	Detailed Syllabus:				
Unit	Description	Duration, h			
1.	Basics Fundamentals of Crypto currencies: Nodes, Transaction, Wallets, Coin Mining, Basics of Trading Exchanges, Market Tradability Crypto Trading Strategies, Blockchain: Nodes, P2P, Ledger, Consensus Methods Genesis Block	6			
2.	How to Store and Use Bit coins How to Store and Use Bit coins, Hot and Cold Storage, Splitting and Sharing Keys, Online Wallets and Exchanges, Payment Services, Transaction Fees, Currency Exchange Market	6			
3.	Cryptography: Cryptographic Hash Functions: Hashing and SHA 256, Digital Signatures, Public Keys, Private Keys, A Simple Crypto currency	6			
4.	Mechanics of Bit coin Bit coin Transactions, Bit coin Scripts, Applications of Bit coin Scripts, Bit coin Blocks, The Bit coin Network, How Bit coin Achieves Decentralization, Centralization vs. Decentralization, Distributed Consensus: Consensus without Identity, The Block chain Incentives, Miners and Mining: Proof of Work, Limitations & Improvements.	6

Course	Course Constitution of India				Code : M_196	51A
Teaching Scheme				Evaluati	ion Scheme	
Lecture	Hours	Credit	IE 1	IE 2	ЕТЕ	Total
1	1	-				

Objectives:

- 3. To understand the constitution and the centre-state relations and functioning
- 4. To understand the rules and regulations under which public and private sector work
- 5. To understand E-governance through computers and knowledge of cyber laws

Outcomes:

After learning the course, the students should be able to:

- 1. Understand the functions of the Indian government and identify and explore the basic features, modalities about Indian constitution and assessment of the Parliamentary System in India.
- 2. Differentiate the functioning of Indian Political system at Central and State level and comprehend the fundamental rights and abide the rules of the Indian constitution.

Detai	led	SvII	abus:

Unit	Description	Duration h
1.	Introduction to Constitution & System of Government Meaning of the constitution law and constitutionalism, making of constitution, Salient features and characteristics of the Constitution of India, Preamble, Fundamental Rights, Directive Principles of State Policy, Fundamental Duties and it's legal status, Citizenship. Structure and Function of Central Government, President, Vice President, Prime Minister, Cabinet, Parliament, Supreme Court of India, Judicial Review, Federal structure and distribution of legislative and financial powers between the Union and the States, local self-government	6
2.	Judiciary and Constitution Functions: Governor, Chief Minister, Cabinet, State Legislature Judicial System in States, High Courts and other Subordinate Courts, Parliamentary Form of Government in India. Constitution Functions: Indian Federal System and it's characteristics, Center& State Relations, President's Rule, Constitutional Amendments and powers, Constitutional Functionaries, Emergency Provisions, Assessment of working of the Parliamentary System in India.	6
	Total	12

Course:	Course: Value Education			Code : M_19	61B		
Teaching Scheme				Evaluatio	n Scheme		
Lecture	Hours	Credit	IE 1 IE 2 ETE Tota				
1	1	-					

Objectives:

- 1. To identify and develop Attitude and Core Faith values
- 2. To expose students to Family Relations
- 3. To enable student to understand Creative Thinking and Problem solving
- 4. To enable students to understand Humanistic Education.

Outcomes:

After learning the course the students should be able to:

- 1 Change in awareness levels, knowledge and understanding of student
- 2 Change in attitudes / behaviour of students with regards to their education improved teamwork, institutional leadership and other life skills
- 3 Improvement in social health and attitude.

Detailed Syllabus:

Unit	Description	Duration h
1	Why Human Relations are so important? Understanding Behaviour, Human Relations, and Performance, Personality, Stress, Learning, and Perception, Attitudes, Self-Concept, Natural acceptance of human values, and Ethics, Dealing with Conflict, Leading and Trust	6
2	Justice in Humankind, Nurturing and Exploitation, Definitiveness of Ethical Human Conduct, Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order, Competence in professional ethics "Knowledge Brings Freedom"	6
	Total	12

Text Books:

- 1. Human Relations in Organizations Applications and Skill Building" Robart Lussier, eighth edition, McGraw-Hill (2014).
- 2. Atkinson and Hilgard's, "Introduction to psychology" Nolen-Hoeksema, S., Fredrickson, B. L., Loftus, G. R., & Lutz, C., Cengage Learning EME.

Program	M.Tech(All Branches)/MCA				Semester: I	
Course: Stress Management					Code : M_1961C	
		Evaluation Scheme				
Lecture	Hours	Credit	IE 1 IE 2 ETE Total			Total
1	1	-				

Objectives:

- 1. To overcome stress
- 2. To achieve overall health of body and mind
- 3. To learn to achieve the highest goal happily
- 4. To become a person with stable mind, pleasing personality and determination

Outcomes:

Students will be able to:

- 1. Develop healthy mind in a healthy body thus improving social health also
- 2. Improve working efficiency

Detailed Syllabus:

Unit	Description	Duration hr
1	Definitions of Eight parts of Yog. (Ashtanga) Yam and Niyam. Do's and Don't's in life.	6
2.	Pranayam Regularization of breathing techniques and its effects- Types of pranayama Approach to day to day work and duties, wisdom	6
	Total	12

Text Books:

1. Yogic Asanas for Group Tarining-Part-I": Janardan Swami Yogabhyasi Mandal, Nagpur

1. Swami Vivekananda, Rajayoga or conquering the Internal Nature, Advaita Ashrama (Publication Department), Kolkata

"Knowledge Brings Freedom"

- 2. Wendelin Küpers, David J. Pauleen, A Handbook of Practical Wisdom Leadership, Organization and Integral Business Practice, 2016
- 3. A Foundation Course in Human Values and Professional Ethics Presenting a Universal Approach to Value Education Through Self-exploration

Program	M.Tech(All Branches)/MCA				Semester: II		
Course:	Team Building &	Team Building & Leadership				Code: M_2962A	
	Teaching Scheme		Evaluation Scheme				
Lecture	Hours	Credit	IE 1	IE 2	ETE	Total	
1	1	-					

Objectives:

- 1. Develop and strengthen interpersonal skills
- 2. Become familiar with and discuss different leadership models.
- 3. Familiarize students with the characteristics of team building.

Outcomes:

After learning the course, the students should be able to:

- 1. Use leadership and teamwork knowledge to develop projects.
- 2. To develop the capacity to work collaboratively in a team

Detailed Syllabus:

Unit	Description	Duration h
4.	Leadership: Will and motivation, Personal leadership, self-knowledge, and self-control, using power responsibly and respectfully: the leader as a team-builder, Ability to plan future actions and transmit that vision to others. Taking the initiative and stimulate others. What the word "leader" means, Types of leadership, Traditional, legal, and legitimate leader. Categories: autocratic, democratic, charismatic, paternalistic, authentic, spiritual, dictatorial, etc.	6
2.	Team work Why is teamwork important? The evolution from group to team: development stages. Advantages and disadvantages of teamwork. How to determine roles in a team. Traditional vs. virtuoso teams, forming effective and balanced teams, Strengthening teams within the organization. Creating a friendly and collaborative environment. Strategies to develop the team's mission, vision, values, and objectives. Shared objectives vs. personal motivation. Distinguishing purpose and tasks in the team. Encouraging participation. Creating team identity, creating high-performing teams.	6
	Total	12

- 3. Michael West, The Secrets of Successful Team Management, Chap. 2, "Self-Management," pgs. 32-61

Program	M.Tech(All Branches)/MCA			Semeste	Semester: II		
Course:	e: English For Research Paper Writing			Code: N	Code : M_2962B		
Teaching Scheme				Evaluation Scheme			
Lecture	Hours	Credit	IE1	IE2	ETE	Total	
1	1	-					

Objectives:

- 1. Understand that how to improve your writing skills and level of readability
- 2. Learn about what to write in each section
- 3. Understand the skills needed when writing a Title
- 4. Ensure the good quality of paper at very first-time submission

Outcomes:

After learning the course the students should be able to:

- 1. Develop the ability to plan and prepare and research papers and reports
- 2. Write a research article, review article, thesis chapter and other related academic research text effectively

Detaile	d Syllabus:	
Unit	Description	Duration h
1	Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness, Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts. Writing the Introduction, Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.	6
2	Key skills needed: Title, Abstract, Introduction, Review of the Literature, Methods, Results, Discussion, Conclusions, Useful phrases, how to ensure paper is as good as it could possibly be the first-time submission	6
	Total	12

"Knowledge Brings Freedom

Text Books:

1. Dey R (2006) How to Write and Publish a Scientific Paper, Cambridge University Press

- 1. Goldbort R (2006) Writing for Science, Yale University Press (available on Google Books)
- 2. Highman N (1998), Handbook of Writing for the Mathematical Sciences, SIAM. Highman's book .

Program	M.Tech(All Bran	nches)/MCA	Semester: II			
Course :	Disaster Manage	ement	Code : M	Code : M_2962C		
Teaching Scheme			Evaluation Scheme			
Lecture	Hours	Credit	IE-1	IE2	ETE	Total
1	1	-				

Objectives:

- 1. To orient engineers about various natural and manmade disasters.
- 2. To teach the concept of Disaster management and measures to be taken at different stages of disaster management.
- 3. To provide insight about global, national and regional level scenario of disaster management.

Outcomes:

After learning the course the students should be able to:

- 1. Learn different disasters and measures to reduce the risk due to these disasters.
- 2. Learn institutional frame work for disaster management at national as well as global level.

Unit	Description	Duration h
1.	Introduction – Hazard and Disaster. Concepts of Hazard, Vulnerability, Risks. Different Types of Disaster: A) Natural Disaster: such as Flood, Cyclone, Earthquakes, Landslides etc B) Man-made Disaster: such as Fire, Industrial Pollution, Nuclear Disaster, Biological Disasters, Accidents (Air, Sea, Rail & Road), Structural failures(Building and Bridge), War & Terrorism etc. Slow Disasters (famine, draught, epidemics) and Rapid Onset Disasters(Air Crash, tidal waves, Tsunami) Causes, effects and practical examples for all disasters.	6
2.	Natural disasters- Earthquakes, Tsunami, Floods, Drought, Landslides, Cyclones and Volcanic eruptions. Their case studies. Coastal disasters. Coastal regulation Zone. Disaster Prevention and Mitigation. Refugee operations during disasters, Human Resettlement and Rehabilitation issues during and after disasters, Inter-sectoral coordination during disasters, Models in Disasters. Disaster Management: Role of Government, International and NGO Bodies. Role of IT in Disaster Preparedness Role of Engineers on Disaster Management.	6
	Total	12

VISION AND MISSION OF MECHANICAL DEPARTMENT

Vision

 To recognize for an academic excellence through skill development, innovation fine blend with quality work culture

Mission

 To impart quality education, innovation culture, necessary skill sets and social commitment among the students to build professional carrier by establishing state-of-the-art Mechanical Engineering infrastructure and conducive learning environment

Programme outcomes:

- 1. An ability to independently carry out research /investigation and development work to solve practical problems
- 2. An ability to write and present a substantial technical report/document
- 3. Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

Programme Specific Outcomes: "Knowledge Brings Freedom"

- Students will be able to critically analyze / synthesize, simulate and optimize
 mechanical systems, components and processes by applying the principles of
 design engineering.
- 2. Student will be able to investigate and provide solutions to complex interdisciplinary problems using modern tools of design engineering.

Higher Study Scope: Ph.D. Research Centre at PCCOE.

Computer Engineering

E&TC Engineering.

Mechanical Engineering.

Features of Ph.D. Research Centers

- Experienced Research Guides
- Separate Research Laboratories, Library, licensed software, recent hardware and other Facilities
- Good support for Publications.
- Justified and clear evaluation systems
- Defined rules and regulations for evaluation and submission.
- Effective Course work conductions
- Well structure infra-facilities

"There are no secrets to success. It is the result of preparation, hard work, learning from failure."

Pimpri Chinchwad College of Engineering (PCCoE),

Pradhikaran, Nigdi, Pune – 411 044

- Colin Powell
